"The number of banks, however, which have been governed by men who have had the firmness of principle to resist temptations laid open to them by the false position in which they are placed, as trustees of property of which they are likely to become the principal borrowers; the number of banks which, under the management of such men, have been conducted with a prudent and honest regard to the interests of the stockholders, are few in comparison with those which have been deeply injured or utterly ruined by the imprudence or misconduct of their managers. 'It is believed,' says Mr. Nathan Appleton, 'that in all cases of bank failures in Massachusetts, the failure of the principal stockholders and directors has accompanied, or preceded, the failure of the bank. The great point, therefore, to be guarded against is, the liability of banks to fall into few hands to be used for their private speculations.' This sound advice from one familiar with the art of banking, as well as the principles of banking, was given in 1831. It was, like many other wise suggestions from the same source, disregarded by the shareholders of banks.

"In some other parts of the country, entire capitals have been sunk in gambling operations of the directors of banks and their associates, who were interested with them; and the instances are not rare, where the assets of a bank proved to be insufficient to redeem its circulation; while in other cases, the depositors, bill-holders, and proprietors, were all stripped of their property. There were banks in this state (Massachusetts), and some of them under the management of individuals who clamoured loudly against all banks as '*aristo-*

* TABLE of Prices and Currency, to show the relative Circulation Prices, Loans, and Deposits prepared by Mr. Tilden.

YEARS.	Bank Circulation.	Flour per Barrel.	Wheat per Bushel.	Corn per Bushel.	Rye per Bushel.	Oats per Bushel.	Beef per Barrel.	Pork per Barrel.	Cotton per Pound.	Loans.	Deposits.
January 1,	dollars.	dir. cts.	dir. cts.	dir. cts.	dir. cts.	cts.	dir. cts.	dir. cts.	cts.	dollars.	dollars.
1835.....	103,692,495	5 50	1 00	0 74	0 75	40	9 25	14 12	17	365,163,834	83,081,305
1836.....	140,301,038	7 00	1 45	0 90	1 13	62	9 75	18 25	16	437,506,080	115,104,440
1837.....	149,185,890	10 87	2 06	1 07	1 20	67	13 00	23 25	19	525,115,702	127,397,185

1839.....	135,170,995	9 00	1 75	0 92	1 15	62	15 87	23 25	14	492,278,015	90,240,146
1840.....	106,968,372	6 00	1 18	0 75	0 67	36	12 25	14 25	10	462,896,523	75,696,857

"By subsequent contractions of the currency, and, for a short time, to a point below its natural level, prices of some of the above articles were reduced considerably lower than the lowest of the quotations. It is not contended by Mr. Tilden, that there were not other causes in operation to raise and to lower prices besides the variations in the bank loans and liabilities. There were great fluctuations in the supply of some of the commodities as compared with the demand, but not greater than in former years, when prices, instead of fluctuating up and down to the extent of fifty and 100 per cent, did not vary more than twenty or twenty-five per cent."

cratic monopolies, whose assets would not redeem their circulation and their deposits. In these instances, the losses fell with the greatest weight upon the most helpless and poorest members of society. And such has generally been the case with ruined banks, of whose impending fate the managers and their friends, and others who can obtain access to correct sources of information, have had such early warnings as to induce them to sell out their shares before they fell into discredit, and the buyers, as one might reasonably expect, have generally been among that class of the community to which we have referred.

"In truth, it cannot be too often repeated, that the losses upon banking fall mainly on the most helpless portion of the community, while the benefits which may be supposed to arise from the use of bank capitals are chiefly shared among the most shrewd, enterprising, and intelligent classes of society.

"The shares in the United States Bank were, more than in most instances, held by persons of large capitals as permanent investments, and by others who dealt in them on speculation. Still, a very considerable portion of its capital, at the period of its ruin, belonged to the class of persons referred to. Accordingly, Mr. Dunlap, its president, in a memorial to the legislature of Pennsylvania, thus alludes to this portion of its stockholders. 'They are widows, orphan children, persons retired from business and active life, and not capitalists only; and all of them have been and are sufferers against their will, without their personal agency, and beyond the possibility of redress by themselves.'

"Before the final bankruptcy of this institution, a larger number of shares held by speculators and by wealthy individuals who had the means of judging of its condition and prospects, were sold out by their proprietors, and probably many of the buyers were persons of smaller means, and, consequently, the stockholders may, at the end of its career, have become more numerous than at any earlier period. From a statement published in 1840, it appears that there were—

	dollars.		dollars.
2257 persons holding stock of the value of	100	to	2,000
1577 " " " " "	2,000	to	10,000
614 " " " " "	10,000	to	50,000
30 " " " " "	50,000 and upwards.		

"From the comparatively few heavy shareholders, it may reasonably be inferred that the largest portion of the sufferers by the ruin of the United States Bank were persons in narrow, or in very moderate pecuniary circumstances. In the same document, we find the following statement:—

The number of shares held by females	29,876
" " " executors and guardians	4,256
" " " trustees	16,248
" " " benevolent institutions	1,758

"These unfortunate persons not only lost the par value of the shares, but it is probable that a considerable portion of the shares were purchased at an advance of ten to twenty-five per cent; and, in some instances, as high as forty to fifty per cent. Those prices were obtainable within a short period of the origin of the bank. As a further aggravation of the feelings of the sufferer, there can hardly be a doubt that a vast amount of shares were purchased at par and upwards after its capital had been invested in securities which, to a great extent, were of little or no value, and, consequently, the actual worth of the shares, when purchased, was not equal to half the sum paid for them; while a still larger amount was purchased somewhat under par, when the bank was in a ruinous condition. Such will generally be the case with ruined banks. The persons who manage them and others acquainted with the facts necessary to rest a judgment upon, will sell out their shares, and they will generally fall into the hands of the least intelligent and most helpless portion of the community, they being the most readily seduced into purchases of stocks at the declining prices usually attendant upon sales of shares in an unthrifty or a ruined corporation.

"An official statement, emanating from the banks in Pennsylvania other than the United States Bank, shows that a still greater proportion of their shares were held by

small proprietors, and by charitable institutions, by females, guardians, &c., than in the latter institution. The returns of shareholders in 1840 show:—

	dollars.	up to	dollars.
6327 persons holding stock of the value of	100	up to	800
2831 " " " "	800	up to	1700
2461 " " " "	1700	up to	4000

"The balance of their shares were owned in sums of 4000 dollars and upwards, and those larger proprietors were probably, as in case of the United States Bank, mostly persons retired from the active pursuits of life, and who, consequently, to their own injury, and to the entire ruin of many of them, had confided their property to the management of agents who, as events have shown, were utterly unworthy of their confidence.

"The number of shares in these institutions held by

Females.....	39,860
Executors, guardians, and trustees.....	26,682
Officers of benevolent institutions.....	1,985

"It is probable that a great portion of the remaining shares were, as before stated, owned by aged and retired persons, or by others who had not the disposition or the skill to manage their property, and, therefore, were willing to place it in a situation where, in the best events, the income would be below the ordinary earnings of capital. But as compensation for a rate of interest restrained by an impolitic and unjust law below the market value of money, they expected *safety*, but they failed of finding it, nor, in the long run, as respects most of the banks, while banks adhere to the principles on which they are based and administered."

Total.....	17,010,000		471,150		481,475		420,300		480,000
Dividend, Apr. 1842.....	442,900				
Increase.....	38,575				

This gives six dividends on a capital of 17,000,000 dollars, as follows:

	dollars.		dollars.
April, 1842	442,900	October, 1843	417,000
October, 1842	471,150	April, 1844	426,300
April, 1843	481,475	October, 1844	480,000

This is the largest October dividend, and shows considerable improvement in the profits

of the banks during the past summer. Notwithstanding the low rate of money, as compared with 1843, there is an increase of fifteen per cent in the profits, which probably arose from an extension of credits in that proportion. Neither banks nor stocks, however, seem to command confidence, as a means of investment. The experience of past years has been such, as to prevent much disposition to put money in banking concerns.

"From the remarks of Mr. William C. Bryant we extract the following passages. They were written antecedent to the suspension of 1837, and are in correspondence with the views maintained by him at a still earlier period, and before there were any signs of a revulsion. They indicate the opinions of one familiar with the true principles of currency and banking, as well as a knowledge of the practical results of our system of banking; and thus he was enabled to foresee and predict the ill consequences which must ultimately flow from a violation of those principles.

"One of the most curious circumstances," says he, "connected with the universal rage for speculation, is the exceeding gullibility of the people. No scheme seems to be too vast to stagger their credulity. The most impracticable plans are received as easy of accomplishment, and the most stupendous projects are entered upon with undoubting confidence, as if they were 'trifles light as air.' The thought obtrudes itself, apparently, into no man's mind, that there is a stopping-place, where all this rapid motion must cease; that the machine, urged to too great velocity, will at last fall to pieces. No one seems to anticipate that there must come a time when the towering fabric which speculation is building up, grown too huge for its foundation, will topple on the heads of its projectors, and bury them in its ruins. Every one acts as if there were no fear that the explosion would take place, while he is in danger. Each one stretches out his hand to grasp his share of the gambler's spoils, without any idea that, like fairy money, it may turn to worthless rubbish in his hands. A general infatuation has seized the minds of the community, and each one grows wilder in his lunacy from listening to the ravings of those around him.

"In the meanwhile, the speculators would, indeed, seem to have discovered the Midas art. Their touch turns every thing to gold. They are all getting rich. One buys the refusal of a farm for a vast deal more than it is intrinsically worth. He sells it to another for a large advance before the term of payment has arrived. The second sells it to a third, the third to a fourth; and, in this way, it probably passes through a dozen hands, before the first instalment of the original price is paid. Each successive purchaser fancies himself rich, and the one into whose possession the property falls last has magnificent plans in prospect, and thinks that he is the richest of all. But pay-day must come, and come ere long, we fear, to many an unprepared speculator, and rudely wake him from his dream of fancied wealth.

"The vast and sudden increase which the paper circulation of this country has undergone within the last eighteen months (from 103,692,495 dollars to 140,000,000 dollars), is the cause of the feverish thirst of riches which the community now exhibits; and whatever shall check that circulation, and turn it back upon the banks, will arrest the disease, but arrest it with a violence that to many will prove fatal, and give a fearful shock to all. Paper money is, to the people of this country, 'the insane root that takes the reason prisoner;' and they can be restored to sanity only by withholding such stimulating and dangerous aliment. As it now is, their appetite grows by what it feeds on. The demand for money increases with each succeeding day; and every new loan of bank credit but gives rise to new projects of speculation, each wilder and more chimerical than the last.

"The effect of this pervading spirit of speculation (or spirit of gambling of the most desperate character, as it might more properly be called), on the morals of the community, is dreadful. Its direct and manifest tendency is to blunt men's moral perceptions, and accustom them, by degrees, to acts and devices of traffic which an honest, unsophisticated mind would shrink from with horror, as frauds of the most flagitious dye. It creates a distaste for the ordinary pursuits of industry; it disinclines the mind from the gradual accumulation in some regular vocation, and kindles an intense desire, like that expressed in the prayer of Ortogrul of Basra, 'Let me suddenly grow rich!' To this gambling spirit of the day we may directly trace the most of those prodigious frauds, the discovery of which has recently startled the public mind. 'Startled the public mind,' did we say?

The phrase is wrong. The public were not startled. They heard the stories with the most stoical indifference; and if any exclamations were uttered, they conveyed rather a sentiment of commiseration for the criminals, than one of detestation for their stupendous crimes.

"But the day of the madness of speculation is drawing to a close. The time must come, nor can it be remote, when some financial or commercial revulsion will throw back the stream of paper circulation to its source, and many a goodly vessel, which had ventured too boldly on the current, will be left, by its reflux, stranded on its shores. Circumstances may yet defer the evil day for a while, but it cannot be far off. A failure of the cotton crop, or any one of the thousand contingencies to which trade is perpetually liable, will give a shock to the widely expanded currency of the country, which will be felt with ruinous force through every vein and artery of business. Woe unto them in that day who do not now take timely caution. Their cities, and towns, and villages, which they now are so fertile in planting, as if they thought men might be multiplied as rapidly as paper money, will remain untenanted and desolate memorials of their madness, and the voice of sorrow and mourning, instead of the din of our present unreal prosperity will be heard through the land."

How very applicable are these remarks to the railway plague of 1845, in England. Mr. Lee, in alluding to paper securities, says:—

"Of the description of securities referred to, and for the most part created by one class of persons, for the purpose of getting possession, through banks or by some other contrivances, of the property of other persons, there must have been, at one period—say from 1834 to 1841—some thousands of millions of dollars in existence within the compass of those few years—the ultimate effect of which was to injure all the banks—to ruin a majority of them—and finally to transfer from the most industrious, prudent, economical, useful, and productive classes of the nation, a considerable portion of their estates, to the most imprudent, reckless, and unprincipled portion of it.

"Of the various classes of citizens who have suffered from this vicious system of banking and gambling—the cotton planters, probably, come in for the largest share of the losses—unless the manufacturers of cotton may be considered as having the unfortunate pre-eminence in that respect. First, in the enhanced prices paid for their raw material and for their labour—consequent upon a superfluous and fluctuating currency. Secondly, in the amount of bad debts on the sales of their manufactured goods. Thirdly, in the delusive appearances of prosperity occasioned by a redundant currency—causing artificially high prices for goods, and leading to the establishment of more manufacturing concerns than the real wants of the country required—and more than would have been established under the more natural and healthy operation of a sound and honest currency. The high profits gained by manufacturers, at periods when prices were unduly enhanced by the action of an expanding and expanded currency—together with an unnatural demand for goods beyond the *paying ability* of consumers—induced by the improvident and too extended trustings of the sellers of manufactures.

"The evils we have described are the natural, if not the inevitable, fruits of a vicious system of currency;—of a currency issued by 900 banks, created and regulated, if regulated at all, by thirty states and territories, managed by 9000 directors, who have the power, and who exercise it too, of expanding and contracting the circulating medium at any moment and to any extent, they may deem expedient, and, consequently, of causing great variations in the prices of commodities. The effect of their operations lead to dangerous speculations, and imprudent and dishonest transactions, and producing what are termed *good times*. The reaction, however, must come. Then come the fall of prices, stagnation, depression, discredit, despair, followed by commercial and monetary convulsions and revulsions; suspensions of individual payments, failures and repudiation: sometimes ending, as in 1814, and more recently in 1837, in the failure of all the banks;—*of those institutions which are allowed the privilege, or it is taken by them, of circulating 150,000,000 dollars of paper notes on a reserve of coin not usually exceeding 30,000,000 dollars or 40,000,000 dollars, with an engagement, on their part, to maintain the currency of the country in a stable and sound condition.*"

The capital of all the banks in New Orleans was, in 1830, 4,665,980 dollars. This was increased to 39,943,832 dollars in December, 1837, a period of seven years. This capital was held or procured as follows :

Procured in Europe, mostly on the credit of the state	dollars.
" other United States	20,725,080
" or held in Louisiana	6,945,710
Total capital paid up.....	12,273,012
	39,943,832

" This capital was subsequently increased to 41,711,214 dollars. The increase of banking facilities at this rapid rate was evidently in advance of the real business of the city, which in the same period had increased fifty per cent only. The bank credits constantly accumulating, sought other than legitimate channels for their employment, at the same time that they greatly facilitated speculators in obtaining the means of operating in cotton—the principal article of export from New Orleans. The market for that article became altogether speculative under the influence thus exercised ; and, by a singular inversion of things, the rate at the same period throughout a season would always be higher in New Orleans, the point of purchase, than in Liverpool, the principal market of consumption. If, through over-production, or an untoward state of affairs abroad, the market was checked, a long chain of reclamations and discredit followed, which made its evil influence felt throughout the union, particularly in New York, where the sterling bills were mostly negotiated. The failures of those banks were very disastrous. The two outer columns of the rate of specie and sight checks on New York, indicate the depreciation of the currency through all the period of suspension which took place in October, 1839. Under the present law, the banks are required to retain in their vaults one dollar for every three dollars of their bills in circulation, with the exception of the real estate banks, which are allowed ninety days. We have here then an outline of the remarkable manner in which capital has been drawn into banking at New Orleans, and been sunk by the inherent vices of the system. In all sections of the country the same general features have and do exist. All that capital which, during the undue excitement of the years subsequent to 1832, was drawn into banking by the operation of speculation in raising prices and creating an extraordinary demand for money, has, in the general fall of property, ceased to exist, leaving, however, active, as much capital as is necessary for the transaction of business. The quantity of money required for the interchange of commodities may be illustrated by the comparative value of the crops of cotton and flour, which are the most valuable, for the years 1837 and 1838, according to the average market value for each year. The average crop of cotton for the last seven years, has been 515,280,000 pounds, and of flour 20,000,000 barrels."—*Hunt's Commercial Chronicle*.

* Seven.

COMPARATIVE view of the Condition of all Banks in the United States, near the Commencement of each Year, from 1834 to 1840, inclusive.

The whole number of banks in the country at the present time, is 901, including 179 branches. In the column for 1840, of the annexed table, sixty-one banks and forty branches are estimated, for lack of fresh returns. In 1834, 5, 6, and 7, more or less banks or branches were estimated for the same reason. For 1838 and 1839, the returns appear to be complete. The estimated banks for 1840 are about one-ninth of the whole number, and comprise about one-tenth of the banking capital. The variation from fact cannot be material; as the estimates are based upon the returns of the previous year.

We have under the head of New York given statistics of the bank of that state down to the end of the year 1843. The following statements and tables include all the statistical information which we have been enabled to obtain, down to the close of the year 1845.

"The state of the currency throughout the union, as a great whole, has been in a most unusually contracted state. Of the banks in eighteen states, reported nearest to January, 1844, the results were as follows :—

Circulation.....	dollars.	Nett circulation.....	dollars.
Capital.....	50,328,587	Specie.....	39,491,363
Notes on hand.....	148,096,460	Loans.....	43,899,678
	10,737,224		193,936,751

"Of the amount of notes on hand, a portion were checks and cash items. The nett circulation was about 41,000,000 dollars, or near 3,000,000 dollars less than the specie on hand—a most extraordinary position of affairs, and eminently indicative of the blight which in the past few years, has overtaken paper credits."—*Hunt's Commercial Review*.

BANKS of New York.

DESCRIPTION.	November, 1844.	August, 1844.	November, 1844.	February, 1845.	May, 1845.

"From May to August is usually the season when travellers and traders coming to New York for pleasure, or to buy goods, or pay old debts, bring with them large amounts of money. It is also the season when the supply of foreign bills being the least, an export of coin springs up to supply the deficit. This year, however, notwithstanding the payment of 2,500,000 dollars New York state stock, due July 1st, and the resumption of the Pennsylvania dividends, the remittances are much less than last year. This arises from diminished imports, and from a better price obtained abroad for cotton sold, as well as for increasing quantities of general farm produce sold in England, under the modified tariff of that country."—*Hunt's Commercial Chronicle*.

Rates of sterling bills on London, and of sight checks on New York, with the receipts of specie, and specie in the banks of New Orleans during the following periods of 1844 and 1845:—

"From June, 1843, to June, 1844, the rate for sterling evinced violent fluctuations, as well as the rate for New York checks. The demand at New Orleans for eastern funds usually raises the rate to a premium as early as May 1st; at which period, in 1844, they were at 1 per cent premium. This year, on the 1st of June, they had only

attained $\frac{1}{2}$ per cent premium. The receipts of specie at New Orleans are also much less, resulting in a decline of the amount held by the banks of that city. The course of trade between the western country and New York usually turns upon New Orleans. The west buys its goods and merchandise of the northern and eastern Atlantic cities, and sells its produce to a great extent in New Orleans. The demand for northern funds, at New Orleans, is therefore proportioned to the extent of purchases, as compared with sales. When the purchases exceed the sales, specie usually leaves the banks of the states in the valley of the Mississippi, and descends the river to New Orleans, for investment in bills. This demand for bills has, in 1845, been less than during the two previous years; and, as a consequence, the specie of the New Orleans banks has decreased, and spread through the western states in general circulation, improving the state of currency, and promoting the soundness of the western trade. The west has been a good deal in want of a circulating medium; and that circumstance has opened the door to the circulation of considerable quantities of irregular paper. Of this description were the issues of some of the Michigan banks, particularly the bankrupt St. Clair bank. In Chicago, Illinois, there is a large circulation of what purports to be checks or certificates of deposit upon Wisconsin insurance companies. In Ohio, the want of a sufficient supply of currency led to the enactment of the law of the last session of the legislature of that state. A sufficient number of banks, under the state bank feature, have been organised, to constitute the state bank; and the governor has issued his proclamation to the effect that some concerns, having complied with the free banking portion of the law, are authorised to commence business as independent banks. The probability is, that new banks will multiply under the loose provisions for the state bank, until a disastrous reverse overtakes the whole. That branch of the law offers greater inducements to irregular banking than does the other branch of the same law. This latter is a copy of the New York free banking law; in relation to which, a most startling decision has been made in the Supreme Court of New York, by Judge Bronson, to the effect that the law authorising them is unconstitutional, and that the institutions organised under it have no legal existence. The conclusion of the decision of the learned judge is as follows:—

“We are then brought to the following results, all founded—not upon mere *dicta*—but upon the express adjudication of the Court for the Correction of Errors:—1. It is the business and duty of the court to examine and decide whether any law falling within the two-thirds clause of the constitution received the requisite number of votes to give it validity. If it did not, the supposed law is utterly void. 2. Associations formed under the general banking law are corporations;—and 3. The constitution extends to all corporations. The conclusion is obvious. Having examined and ascertained that the general banking law did not have the assent of two-thirds of the members of either house, it follows that, so far as it authorised the forming corporations or associations, it is utterly void; and the banking companies which have been organised under it have no legal existence.”

“This decision, should it be sustained, involves the most important consequences; in order to estimate which, we annex the following table:

—BANKS OF NEW YORK, distinguishing the Free Banks, 1844-5.

"The interest involved in these existing banks, is, it appears, near 32,000,000 dollars, or rather more than twenty-five per cent of the whole banking interest of the state, in addition to which, there are some 12,000,000 dollars involved in free banks in liquidation in the hands of trustees, &c. This is the second serious difficulty which has grown out of the loose, not to say careless, manner in which the state constitution is trifled with, in the formation of laws, affecting in their operation the best interests of the people of the state. The state constitution provides a vote of two-thirds of all the members elected to each branch of the legislature shall be required to any bill creating, continuing, or altering, or renewing any body, politic or corporate, or for the appropriation of public money to a local or private purpose. Notwithstanding these provisions, some 5,500,000 dollars were given to railroads on a majority vote, and a bill under which sixty-five banks have been organised with reference to some paper, as money, passed by a similar vote. And these great interests are now declared null and void for the want of proper adherence to the organic law of the state."

STATISTICS OF THE SAVINGS' BANK OF NEW YORK.

"According to an official copy of the Twenty-fifth Annual Report of the Trustees of the Bank of Savings, in the city of New York, for 1843, laid before the legislature March 8, 1844, it appears that the trustees have received from 18,479 depositors, from 1st of January to 31st of December, 1843, the sum of 1,157,682 dollars 50 cents. The nature of drafts paid was 148,814 dollars, and the amount paid out was 950,286 dollars.

"The following table exhibits the number of persons from whom deposits were received, and the amount deposited; the number of drafts drawn at the institution, and the amount paid out, in each month of the year, commencing in January, and ending in December, 1843:

"The following table presents a general view of the institution, from the commencement of its charter, in July, 1819, to January, 1844:—

"The foreign, as well as the domestic exchanges, have during the past year, 1844-5, evinced a remarkable steadiness; causing them to assimilate, in a very great degree, to the state of the exchanges between the nations of Europe. As an evidence of this great regularity in price, we may take a table of the prices of bills on England at New Orleans, checks on New York, and the rate of sterling at New York, at corresponding periods throughout the year;—also, the quantity of cotton and tobacco exported from New Orleans, from the 1st of September, when the cotton year commences, to the close of each month, as follows:—

COMPARATIVE Rates of Sterling, at New York and New Orleans.

" Cotton and tobacco form the basis of two-thirds of the foreign bills with which the markets are supplied. Therefore; that the quantity of these bills offering must be the greatest at those seasons when the cotton goes forward most freely—that is to say, in the month of December, when 200,000 bales of cotton, worth 6,000,000 dollars, went forward, the supply of bills must have been very much greater than in the month of June, when 50,000 bales, worth 1,500,000 dollars only, went forward. Most of these bills are sent to New York for negotiation; and, by that means, become the basis on which the domestic exchanges turn, to a very considerable extent. In the winter months, therefore, when the largest supply of foreign bills on southern account is selling in New York, the greatest supply of drafts on New York is created, and the rate falls to a discount in the southern cities. In the spring months, when southern dealers are coming north, and payments mature for goods purchased north and east, on southern and western account, a demand springs up for northern funds, which raises the rate to a premium, as observed in the table. It is very remarkable that, notwithstanding the great irregularity in the supply of bills, the price has maintained a uniformity which, perhaps, the exchanges of this country never before exhibited, for so great a length of time. Two important influences have gradually come into operation, to effect this result. *One is the long continued abundance of money in England, and its comparative cheapness, compared with the rates obtainable for its use on this side of the Atlantic, and the facility of its transfer, by means of steam navigation;* and also the increase of exchange operations with the continent, by means of which, arbitrations can be made to better advantage, in some cases, indirectly, than directly—thus affording a check upon too exorbitant a demand upon any one point; as, for instance, knowing the price of continental bills in London, which are sold for cash. It is easily ascertainable which will be the best remittance to London, a sterling bill, or a bill on any of the continental cities—say Hamburg. The price of Hamburg bills in London being mks. 13.9½ shillings per £, then the difference will be as follows:—

15,000 marks banco sold in London, at mks. 13.9½ sh.....	£	s.	d.
Less brokerage, 1-10 per cent.....	1103	8	11
		1	2
Proceeds in London.....	1102	6	10
Remitted in sterling.....	£1111	12	1
Less interest, 60 days.....		9	5
		1102	6
£1111 12s. 1d. at 4.79, or 107.77, cost in New York ...	dls.	5324	58
15,000 banco marks cost, at 35½.....		5325	00

" Thus a premium equal to 7.77 per cent on sterling, is equal to 35½ for marks banco. An advance of sterling to 8 per cent would, therefore, make the marks (remaining the same) the best remittance to London; and, as the exports of produce to the continent are largely on the increase, the material for these arbitrations is greatly increasing. It is also the case, that the leading London houses are largely connected on this side of the water; and the fluctuations in the exchanges afford far too profitable a means of employ-

ing money, to allow them to take place to such extent as formerly. *The true par of exchange between New York and London, is about 9½ nominal premium.* It requires however, an advance to near 10½, before gold can be shipped to advantage. When, therefore, bills are scarce, and command ten per cent, at a time when money is worth two per cent in London, and six per cent in New York, it is evident that considerable profit is realised by selling at ten per cent; employing the money here to better advantage than it can be employed in Europe, and replacing the bills when the crops come forward, at a difference, perhaps, of one per cent. These are powerful influences in preserving a steadiness of exchange, and are the reverse of that system formerly practised by banks at the south. Those concerns bought bills when they were cheap, and held them without interest, to sell when they advanced. Hence, unless they got a price equal to the accumulated interest, with a profit added, they lost money. Under such a system, the fluctuations in bills, and the margin between the north and south, were necessarily greater than when individual capital is applied, as now, to their regulation.

"The fiscal year, for the federal government, closed on the 30th of June, 1845, and the revenues are about 5,000,000 dollars less than the estimates. This has arisen from the diminished imports; and these, in their turn, have resulted from the fact that the imports of last year were in excess of the country, at a time when the low prices of produce necessarily compelled an economy in purchases of consumable goods, beyond that which is usually observed when the profits of planting and farming, arising out of high moneyed prices for produce, are large. Among the population of the United States, perhaps, to a degree greater than in any other country, the enterprise of the people keeps pace with their means; and the general trade of the country fluctuates, in a rapid and marked manner, with the temporary prosperity of the leading interests.

"The bulk of the people of the United States derive their means from the sale of tobacco, cotton, rice, and farm produce; all of which depend for their price upon the state of the foreign markets, where the largest proportion of the surplus is consumed. The tariff of 1842 was looked upon, by very many of the friends of protection, as too ultra in its nature to be permanent; and, as such, did not meet their entire approbation.

"In a popular government like our own, there is always a diversity of interests, and a variety of views in relation to the utility of leading measures. In most cases, there are real benefits derivable from legislation on commercial subjects, by one class of citizens, to the positive injury of some other class or classes. There is, perhaps, no subject of legislation, in which stability is of greater importance, than that of the tariff. In constructing a tariff, therefore, which shall serve the interests of all classes, and of the country at large, permanency is the quality which is most to be desired. It matters far less, in the long run, how high or how low may be the average per cent payable on imported goods, provided that rate is enduring. All classes, in the conviction that it is not subject to change, will accommodate themselves to its practical operation, and the business of the country progress steadily.

"On the other hand, a state of uncertainty paralyses the enterprise of citizens, stagnates capital, and imparts a sluggish movement to trade, which is not slow to evince itself in decreased employment, and reduced wages to the working many. Hence it is, that the benefits expected from any commercial measure, of a radical character, rarely, if ever, flow from it. No matter what may be the advantages offered to the employment of capital, in any particular branch of industry, if the constant fear hangs over the capitalist that those advantages may be, after he has embarked his capital, suddenly withdrawn, before he can reap the expected profits, or even be remunerated for his outlay. In such a state of uncertainty, he chooses rather to employ his funds temporarily, even at a less profit, until the future holds out more of stability. This is more particularly true in relation to those benefits which flow incidentally from legislative action, than in those which take the form of a special charter, as in the case of the Ohio bank law. Notwithstanding that law was strictly a party measure, and a strong opposing party threatened repeal as soon as it became a law, yet numerous banks have been started under it; because those banks, thus started, will have a legal existence up to the period

designated by the law under which they were authorised, notwithstanding that the repeal of that law may take place, and prevent any new institutions from being formed.

"The stagnation of trade, to which we have alluded, as incident upon a renewed discussion of the tariff question, at the next session of Congress, will doubtless have a marked influence upon the business of the coming fall. There seems to be an attempt making to continue the employment of banks in some sort, as is now the case under the act of June 17, 1844; under which the banks give a required security, and from them the United States deposits cannot be removed without sufficient cause assigned by the secretary, or on their failing to comply with the requisitions in relation to security.

"It has been the experience of the English government and people (and, in matters of finance theirs are operations of a magnitude sufficient to form a guide for the commercial world), that the mere power of expansion in banking institutions, even when the ultimate payment of every individual bill is in nowise jeopardised, has an influence deleterious to commercial and national interests; and, acting upon that experience, the government has positively restricted the banks of the whole kingdom from exceeding a certain amount of paper issues. It is not that there is danger that the Bank of England will fail, and not be able to pay its notes, that government has positively restricted its credit issues to a point as low as 14,000,000*l.*; or 6,000,000*l.* below its usual actual issues; and has prohibited, hereafter, the creation, throughout the United Kingdom, of any bank of issue whatever. It is because the object to be obtained is a steadiness of the currency, and a uniformity of its action as nearly as can be ascertained, in all the channels of business. The power of increasing or diminishing the volume of the currency at will, is the power of altering the value of all property and of all prices, as well as of raising prices in one branch of trade, and of lowering them in another, by withdrawing funds from one quarter, and putting them out in another. This involves an aggregate loss to the community of far greater magnitude than that incurred by the occasional failure of an isolated bank, in the payment of its notes. Hence, although the Bank of England continues to be the recipient of the deposits of the government, as those deposits are payable promptly out again, for government uses, a small portion of them, only, can be re-loaned by the bank. It has no power of multiplying them by the issues of its own notes, in a proportion greater than the sum of the deposits it holds. In the United States, if the banks were banks of discount and deposit, only, the use of them by the government, as depositories, would not involve any serious changes in the channels of employment, for any considerable sums of money. As the case stands, however, the receipt of the public money gives to the government bank the means by which it extracts specie from the debtor institutions. It then has it in its power to multiply that specie by three, in its loan transactions. Thus, extensive curtailments take place within the circle of the debtor banks, and an equally large expansion around the government depository. The effect of this is to disturb the channels in which the capital of the country is usually employed; and by so doing, to produce great evils. In general estimation, the effect of making the public dues payable in specie, only, is to produce a decline in general prices. This is, no doubt, the legitimate effect of such a measure, if put in operation at a time when a level of prices exists, and which has resulted from a superabundance of credits, based upon the specie called into action by the government demands. Such cannot, however, be the effect when prices are low, and are uninfluenced by the presence of any considerable portion of outstanding credits.

"In England, and on the continent, the consumption of raw produce of all kinds, is vastly in excess of what has been the case for a series of years; and although the crops are so prolific as to afford unusual supplies, there are indications of advancing prices, consequent upon increased consumption. This latter circumstance is that which the present policy of the British government is avowedly designed to encourage; and a recent announcement of the premier was to the effect that it had succeeded beyond expectation. The enhanced consumption of raw produce in England is, of all other occur-

rences, best calculated to promote the interests of the United States; but it takes from the over-supplied markets here that surplus, during the presence of which, prices cannot rise healthy. It is obviously the case, that the wealth of all people consists in the quantity of the products of the earth, and of industry, that they are enabled to enjoy. That government, therefore, confers the greatest benefits upon its people, which allows the labour of each individual to procure for him the greatest quantities of necessities and comforts."—*Hunt's Commercial Chronicle*.

THE SUFFOLK BANK, BOSTON.

The system of this bank, which has a capital of 1,000,000 dollars, is on behalf of an association of banks in Boston, to receive at par bills of any of the New England states, which shall deposit in specie in the Suffolk bank, a certain sum on which no interest shall be allowed, and before drawing out which fifteen days' notice shall be given. Its purpose is, in fact, to arrange the exchanges, and negotiate at Boston the bills of the several New England states,—and its profits arise from the use of the deposits,—while other banks pay interest on deposits.

"There is a marked depression in prices, it appears, in almost all descriptions; which is more remarkable in stocks of the character of United States six per cents, and New York city and state. It is observable, however, that the last quotations for United States stocks are dividend off. This price for United States stocks yields rather less than five per cent for the money. A new loan of 400,000 dollars has been made, however, by the state of New York, under the law for preserving the state credit, at a rate which yields five and three-quarters per cent. The loan is a six per cent semi-annual stock, redeemable in 1852, and was taken at 102 dollars and 25 cents for 170,000 dollars; 102 dollars and 30 cents for 225,000 dollars; and 103 dollars and 25 cents for 5000 dollars. The old stocks of the same time and tenor, are selling in the market at six per cent premium. The following table shows the whole amount of the present debt of the state of New York, and the terms on which each debt was contracted:—

New York state debt, July, 1845					19,790,514

" This is the direct debt of the state. There are, in addition, some 5,500,000 dollars New York stock issued in railroad and canal companies, some of which the state is already burdened with. It will be observed that the terms on which New York has been able to borrow money, have varied greatly during the twenty-eight years since she first

became a borrower. In the years 1830—1833, she obtained as high as fifteen and a half per cent premium for regular issues of five per cent stock, twenty-two years to run. Such an enormous price for stocks, in this country, naturally led to their extensive manufacture; and, like all other business, it was overdone. Since that time, the creation of some 230,000,000 dollars of public stock, state and city, has taken place. Under these circumstances, it is to be expected that the price of stocks would rule low. It is, however, to be taken into account, that prices of all commodities are low, profits of business are small, and the number of enterprises demanding extraordinary capital fewer than formerly. Hence, it would naturally follow that money would seek stocks for investment to a greater extent than in those years, when a speculative feeling, pervading all classes of business, induced a demand for capital, even in the smallest channels of business, to invest in extraordinary operations, apart from the regular business of the operator. It is true that the railroad speculation in the New England states has gone on to a surprising extent, but there is nothing in it of that wildness that marked bank speculations in former years; and, after all, the amount of capital to be expended in the projected railroads of the five New England states is small, compared to the actual wealth of that section of the country, the object to which it is to be applied, and the sources whence it will mostly be drawn. The roads projected, are nearly all well located. It is true that, in some cases, parallel lines are laid out; but they are in sections of the country densely populated, connecting important interests. The legislature of Connecticut has granted a charter for a most important link in connecting the great New England web of railroads with the city of New York. We allude to the Hartford and Danbury railroad running forty miles from Hartford, to strike the New York line at or near the boundary of West Chester and Putnam counties. The capital is fixed at 2,000,000 dollars. The route is through the largest and most wealthy manufacturing towns of Connecticut, forming a connexion with the Harlem, the means of communication between New York city and the great eastern districts. This, with the Erie and Harlem roads, will require 10,000,000 dollars in a year or two, and the eastern roads may require 15,000,000 dollars, in addition to 2,500,000 dollars that Boston will require for her water-works. The whole may form an amount equal to 30,000,000 dollars, to be expended in two or three years. This, it will be observed, is an operation far different in its results from that of investing large sums in banking; which, with the credits of those concerns, are loaned out to speculators, and sunk in baseless undertakings, that leave no valuable equivalent for the outlay. In the present state of this country, the construction of a railroad establishes a property, the value of which must constantly be enhanced, as the country progresses in population and wealth.

A TABLE exhibiting the Value of the Notes of the Several Banks of the United States, as compared with the Notes of the City Banks of New York; the latter being calculated as the *Par Standard* of the Currency in August, 1845.

LEGAL Rates of Interest in the different States and Territories.

STATES.	RATE OF INTEREST.	PUNISHMENT OF USURY.
Maine	6 per cent	Forfeit of the debt or claim.
New Hampshire	ditto	Forfeit of three times the amount unlawfully taken.
Vermont	ditto	Recovery in an action, with costs.
Massachusetts	ditto	Forfeit of three-fold the usury.
Rhode Island	ditto	Forfeit of the usury and interest on the debt.
Connecticut	ditto	Forfeit of the whole debt.
New York	7 per cent	Usurious contracts void.
New Jersey	6 per cent	Forfeit of the whole debt.
Pennsylvania	ditto	Ditto ditto.
Delaware	ditto	Ditto ditto.
Maryland	ditto	On tobacco contracts, eight per cent. Usurious contracts void.
Virginia	ditto	Forfeit double the usury taken.
North Carolina	ditto	Contracts for usury void, forfeit double the usury.
South Carolina	7 per cent	Forfeit of interest, and premium taken, with costs to debtor.
Georgia	8 per cent	Forfeit of three times the usury, and contract void.
Alabama	ditto	Forfeit of interest and usury.
Mississippi	ditto	By contract as high as ten per cent. Usury recoverable in action of debt.
Louisiana	5 per cent	Bank interest, six per cent; conventional, as high as ten per cent; beyond, contract void.
Tennessee	6 per cent	Usurious contracts void.
Kentucky	ditto	Usury may be recovered, with costs.
Ohio	ditto	Usurious contracts void.
Indiana	ditto	On written agreement may go as high as ten per cent; penalty of usury, a fine of double the excess.
Illinois	ditto	Three-fold amount of the whole interest.
Missouri	ditto	By agreement as high as ten per cent. If beyond, forfeit of whole interest due, and of the usury taken.
Michigan	7 per cent	Forfeit of the usury taken, and one-fourth the debt.
Arkansas	6 per cent	By agreement, any rate not exceeding ten per cent. Amount of usury recoverable, but contracts void.
District of Columbia	ditto	Usurious contracts void.
Florida	8 per cent	Forfeit of interest and excess, in case of usury.
Wisconsin	7 per cent	By agreement not exceeding twelve per cent. Forfeit treble the excess.
Iowa	ditto	By agreement as high as twelve per cent. Forfeit treble the excess.

*. * On debts or judgments in favour of the United States, interest is computed at the rate of six per cent per annum.

DAMAGES ON PROTESTED BILLS OF EXCHANGE.*

The laws and usages of the states vary essentially on the subject of damages on protested bills. In some cases, the regulations of states approximate to each other, while in others, they are widely different. In some cases, the law or rule is unlike, but the result is nearly similar; while, between other states, the result varies from four and a half to fifteen per cent.

In *Massachusetts*, the usage was to recover the amount of the protested bill at the par of exchange, and interest, as in *England*, from the time payment of the dishonoured bill was demanded

* Chiefly from the fourth edition of Chancellor Kent's Commentaries.

of the drawee, and the charges of the protest, and ten per cent damages in lieu of the price of exchange. But this rule has been changed by statute, in 1825, 1835, and 1837; and bills drawn or indorsed in that state, and payable without the limits of the United States, and duly protested for non-acceptance or non-payment, are now settled at the current rate of exchange and interest, and five per cent damages; and, if the bill be drawn upon any place beyond the Cape of Good Hope, twenty per cent damages. The rate of damages in Massachusetts, on inland bills, payable out of the state, and drawn or indorsed within the state, and duly protested for non-acceptance or non-payment, is two per cent in addition to the contents of the bill, with interest and costs, if payable in any other New England state, or New York; and three per cent if payable in New Jersey, Pennsylvania, Delaware, and Maryland; and four per cent, if payable in Virginia, District of Columbia, North Carolina, South Carolina, or Georgia; and five per cent, if payable in any other of the United States, or the territories thereof.

Maine.—Payable out of the state, and in New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, or New York, three per cent; in New Jersey, Pennsylvania, Delaware, Maryland, Virginia, or District of Columbia, five per cent; in North Carolina, South Carolina, or Georgia, six per cent; at any other place in the United States or territories, nine per cent; at any place out of the United States or territories, ten per cent; payable within the state, at not less than seventy-five miles distance, in sums of 100 dollars and over, one per cent.

New Hampshire.—[In this state there is no statute regulation on the subject. The usual practice has been to charge the rate of damages existing at the point where the bill was payable.]

Vermont.—[No statute regulation. The practice has been similar to that in New Hampshire.]

Rhode Island.—Payable without the United States, ten per cent; or within the United States, and out of Rhode Island, five per cent.

Connecticut.—The rule of damages on bills returned protested, and drawn on any person in New York, is two per cent upon the principal sum specified in the bill; in New Hampshire, Vermont, Maine, Massachusetts, Rhode Island, New York (city of New York excepted), New Jersey, Pennsylvania, Delaware, Maryland, Virginia, or territory of Columbia, three per cent; in North Carolina, South Carolina, Ohio, or Georgia, five per cent; in any other part of the United States, eight per cent upon such principal sum, and to be in lieu of interest and all other charges and without any reference to the rate of exchange.

New York.—The rate of damages on bills drawn and payable within the United States, or other parts of North America, was, in 1819, regulated in New York by statute, and the damages fixed at five, or seven and a half, or ten per cent, according to the distance or situation of the place, on which the bill was drawn. But, by the new revised statutes, which went into operation on the 1st of January, 1830, the damages on bills, foreign and inland, were made the subject of a more extensive regulation. They provide, that, upon bills drawn or negotiated within the state, upon any person, at any place within the six states east of New York, or in New Jersey, Pennsylvania, Ohio, Delaware, Maryland, Virginia, or the District of Columbia, the damages to be allowed and paid, upon the usual protest for non-acceptance or non-payment, to the holder of the bill, as pure chaser thereof, or of some interest therein, for a valuable consideration, shall be three per cent upon the principal sum specified in the bill; and upon any person at any place within the states of North Carolina, South Carolina, Georgia, Kentucky, and Tennessee, five per cent; and upon any person in any other state or territory of the United States, or at any other place on, or adjacent to, this continent, and north of the equator, or in any British or foreign possessions in the West Indies, or elsewhere in the Western Atlantic ocean, or in Europe, ten per cent. The damages are to be in lieu of interest, charges of protest, and all other charges incurred previous to, and at the time of, giving notice of non-acceptance or non-payment. But the holder will be entitled to demand and recover interest upon the aggregate amount of the principal sum specified in the bill, and the damages, from the time of notice of the protest for non-acceptance, or notice of a demand and protest for non-payment. If the contents of the bill be expressed in the money of account of the United States, the amount due thereon, and the damages allowed for the non-payment, are to be ascertained and determined, without reference to the rate of exchange existing between New York and the place on which the bill is drawn. But, if the contents of the bill be expressed in the money of account, or currency of any foreign country, then the amount due, exclusive of the damages, is to be ascertained and determined by the rate of exchange, or the value of such foreign currency, at the time of the demand of payment.

New Jersey.—[There are no statute regulations on this subject in New Jersey.]

In *Pennsylvania*, the rule, for a century past, was twenty per cent damages, in lieu of re-exchange; but by statute, in 1821, five per cent damages were allowed upon bills drawn upon any person in any other of the United States, except Louisiana; if on Louisiana, or any other part of North America, except the north-west coast and Mexico, ten per cent; if on Mexico, the Spanish Main, or the islands on the coast of Africa, fifteen per cent; and twenty per cent upon protested bills on Europe, and twenty-five per cent upon other foreign bills, in lieu of all charges, except the protest, and the amount of the bill is to be ascertained and determined at the rate of exchange.

Delaware.—Payable at any place within the United States, or territories, out of Delaware, five per cent; at any place in Europe, twenty per cent.

In *Maryland*, the rule, by statute, is payable without the state, and at any place in the United States, or territories thereof, eight per cent; in any foreign country, fifteen per cent. And the amount of the bill ascertained at the current rate of exchange, or the rate requisite to purchase a good bill of the same time of payment, upon the same place.

Virginia.—Payable out of the state, at any place within the United States, or territories, three per cent; in any foreign country, fifteen per cent.

In *North Carolina*, by statute, in 1828, damages on protested bills, drawn or indorsed in that state, and payable in any other part of the United States, except Louisiana, are six per cent; payable in any other part of North America, except the West India islands, ten per cent; payable in South America, the African islands, or Europe, fifteen per cent; and payable elsewhere, twenty per cent.

South Carolina.—Payable within the United States, at any place out of South Carolina, ten per cent; in any other part of North America, or the West India islands, twelve and a half per cent; in any other part of the world, fifteen per cent.

Georgia.—The damages in Georgia, by statute, in 1827, on bills drawn on a person in another state, and protested for non-payment, are five per cent; and on foreign bills, protested for non-payment, are ten per cent, together with the usual expenses and interest, and the principal to be settled at the current rate of exchange.

Alabama.—The damages on bills, drawn in the state of Alabama, on any person resident within the state, are ten per cent; and on any person out of it, and within the United States, are fifteen per cent; and on persons out of the United States, twenty per cent on the sum drawn for, together with incidental charges and interest.

In *Louisiana*, in 1838, the rate of damages, upon the protest for non-acceptance or non-payment of bills of exchange, drawn on, and payable in foreign countries, was declared by statute to be ten per cent; and in any other state in the United States, five per cent, together with interest on the aggregate amount of principal and damages. On protested bills, drawn and payable within the United States, the damages include all charges, such as premiums, and expenses, and interest on those damages, but nothing for the difference of exchange.

In *Mississippi*, the damages on inland bills, protested for non-payment, are five per cent; if drawn on any person resident out of the United States, ten per cent.

The damages in *Tennessee*, by statute, in 1830, on protested bills, over and above the principal sum, and charges of protest, and interest on the principal sum, damages, and charge of protest from the time of notice, are three per cent on the principal sum, if the bill be drawn upon any person in the United States; and fifteen per cent, if upon any person in any other place or state in North America, bordering on the Gulf of Mexico, or in the West Indies; and twenty per cent, if upon a person in any other part of the world. These damages are in lieu of interest and all other charges, except the charges of protest, to the time of notice of the protest, and demand of payment.

Kentucky.—On foreign bills, ten per cent, damages are allowed. On inland bills, damages are governed by the law of the place.

Ohio.—Payable at any place without the United States, twelve per cent; within the United States, at any place out of Ohio, six per cent.

Indiana.—Payable at any place without the United States, ten per cent; at any place within the United States, out of Indiana, five per cent. Drawer or indorser not liable for damages, if paid at maturity, with costs.

Illinois.—Payable at any place without the United States, ten per cent; at any point within the United States, and out of Illinois, five per cent.

Missouri.—Payable at any place within the state, four per cent; out of the state, and within the United States, ten per cent; at any place out of the United States, or territories, twenty per cent.

Michigan.—[No statute regulation has as yet been adopted in this state.]

Arkansas.—Payable at any place within the state, two per cent; in Alabama, Louisiana, Mississippi, Tennessee, Kentucky, Ohio, Indiana, Illinois, Missouri, or at any place on the Ohio river, four per cent; in any other place in the United States, or territories, five per cent; at any place out of the United States, ten per cent; together with costs and interest at the rate of ten per cent. per annum.

Florida.—Same as the state of Alabama.

Wisconsin.—Payable at any place without the United States, twenty per cent; out of the territory, adjoining the same within the United States, five per cent; in the United States, not adjoining the territory, ten per cent.

Iowa.—The same as in the territory of Wisconsin

District of Columbia.—[The rates established in Maryland and Virginia, are charged on protested bills in the district.]

CHAPTER XXXV.

MONEYS, WEIGHTS, AND MEASURES, OF THE UNITED STATES OF AMERICA.

THE decimal system was adopted by Congress in the subdivision of moneys, but not as respects weights and measures.

The power of regulating the standard of the latter was vested in the federal government, which acted upon this authority, first, in regard to the custom-house duties, and afterwards generally; but not until it was found that the weights and measures of Massachusetts had become inaccurate, and that the weights and measures differed in one state from those of another.

In 1836, a law was passed for regulating the weights and measures of the union. This law directed the secretary of the treasury to construct and supply standards of weights, of length, and of capacity of the United States, to the executives of the different states of the union, the governors of territories, and the custom-houses.

The report of Mr. John Quincy Adams, upon weights and measures in the year 1821, was acted upon, in most of its details, as much as if the law had been passed at the time the report was made. Mr. Adams gave the preference to the standards of Great Britain over those of France, from the circumstance that they were generally in use in the United States, and on the ground that a great change in weights and measures similar to that introduced in France, of the same decimal principle, would have been attended with great embarrassment.

The troy weight of England was adopted for weighing bullion.

The avoirdupois weight of England for weighing all other articles bought or sold by weight.

The British and the American statute acre, square yard, square foot, and inch are the same.

The linear measures of England, that is the mile, yard, foot, and inch, are the same in America.

England has, however, altered her corn and liquid measures, while America retains the old English wine gallon for liquids, and the Winchester bushel for corn, &c.

MONEYS.—It is remarkable that computations in old depreciated currencies should have, in ordinary transactions, continued to prevail. The dollar in the Massachusetts states has been long valued at six shillings; in New York and North Carolina at eight shillings, varying also in almost every other state. The legal moneys are, however, gold eagles, silver dollars, and copper cents. (*See Mint of United States* hereafter.) Coins of foreign countries, many of them old and

much worn, are found in most towns. Into New Orleans, Mexican, South American, and Spanish dollars, and Spanish Mexican and South American gold have always flown in. This has been the case in regard to many other towns. Accounts are kept in dollars and cents. The exchanges with foreign countries fluctuate. The following tables will show the valuations and exchanges.

MONEY TABLES.

A TABLE of Gold Coins, the exact Weight, the Assay, and the present Value in the United States, according to the Gold Coin Bill passed by Congress during their session in 1833-4.

* Guineas, when received in this country, are almost invariably one grain light, and, therefore, the real value of them is 5 dollars 7½ cents.

† A sovereign, when received from the Mint, weighs 5 dwts. 3½ grains, but nine-tenths of those brought to this country do not weigh more than 5 dwts. 2½ grains. The average value of each sovereign is 4 dollars 85 cents; of course, those which are of full weight are worth the price above stated.—*New York Merchants' Magazine.*

MONEY TABLE—*continued.*

Sovereigns compared with a Draft on London at 60 days' sight. Quotations of London Exchange, reduced into Federal Money, as recommended by the Chambers of Commerce in the United States.

Price of Sovereigns in the United States.	Equal to a Remittance in Pounds Sterling.	Precise proportion between both Quotations.	As adopted by the New York Price Current.

To reduce Dollars to Pounds Sterling.—From one-fourth of the number of dollars deduct 10 per cent of that fourth, and the remainder will be pounds, and the decimals of a pound.

Example.—Required the value 444.44 dollars in pounds sterling.

One-fourth equal to 111.11
10 per cent equal to 11.11

£100.00 Answer.

Note.—The value of British silver shilling in the United States is 22 cents 2 mills.

The following foreign coins, when of the required fineness, are a legal tender in the United States, at the following rates:—

GOLD COINS.

	Carats.
1 Those of Great Britain, Portugal, and Brazil, of 22 carats fineness, at	94.8 per dwt.
2 Those of France, 9-10 line	93.1 "
3 Those of Spain, Mexico, and Columbia, of the fineness of 20 carats 3 7-16 grains.....	89.9 "

SILVER COINS.

1 Dollars of Mexico, Peru, Chili, and Central America, and those restamped in Brazil, weighing 415 grains, and of the fineness of 10 ounces 15 pennyweights of pure silver in a troy pound	At 100 cents each.
2 Five-franc pieces of France, of the fineness of 10 ounces 16 pennyweights in the troy pound, and weighing 384 grains	At 93 cents each.

Pro forma accounts of shipments of Mexican dollars to France and England, calculated by Mr. J. F. Entz, of the New York Life Insurance and Trust Company:—

PRO FORMA Account of a Shipment of Mexican dollars from New York to London.

20,000 dollars purchased at $1\frac{1}{4}$ per cent premium.....	dollars.	20,350 00
Cost of 4 barrels, packing charges, cartage, &c.	dollars.	10 75
Insurance, at $\frac{1}{4}$ per cent, on 20,350 dollars	101 75	
Policy	1 25	
	103 00	
Total cost in New York	20,463 75	
The same 20,000 dollars, weighing 17,320 ounces, and sold at 4s. 10 $\frac{1}{2}$ d. per ounce..	£ s. d.	4,194 13 10
Charges—Freight per packet, $\frac{1}{4}$ per cent	£ s. d.	10 8 4
Primage, $\frac{1}{2}$ per cent.....	10 5	
Landing charges, postages, &c.....	1 5 9	
Brokerage, $\frac{1}{4}$ per cent.....	5 4 10	
Commission, $\frac{1}{4}$ per cent	20 19 6	
	38 0 10	
Net proceeds, cash.....	4,156 5 0	
Add interest of about 45 days, at 4 per cent, until the draft drawn against the shipment becomes due	20 15 7	
Total	4,177 0 7	

This amount, drawn at 60 days' sight, to realise the above 20,463 dollars, 75 cents the rate of exchange would have to be 110 23-100 per cent; which shows that the shipment would not be profitable, unless at least 110 $\frac{1}{4}$ per cent could be obtained for the draft. Without commission in London, the rate would be 109.67.6, or about 55-100 less.

The following is a table by which the rate of exchange may be ascertained, at any given price for silver, in London:

EXCHANGE TABLES.

Exchange tables between London and the United States, and remittances to London from Paris, Hamburg, and Amsterdam, calculated at various rates from minimum to maximum of exchange.

PARIS Remittances to London* for Negotiation, compared with a Direct Remittance at Sixty Days' Sight, exclusive of Commission.

Example.—Mexican dollars costing 1½ per cent premium, and sold in London at 58½ pence per ounce, are equal to an exchange of 409.96.

The intermediate prices for dollars are found by taken the difference as follows, viz. —

Dollars, at 1½ per cent, and 58 pence 1 per cent, equal to 109.65
 1½ " " equal to 110.20

Difference.....

56

One half of this, or 27½, added to 109.65, equal to 109.97.

PRO FORMA Account of a Shipment of Mexican Dollars from New York to Paris.

20,000 dollars, purchased at 1½ per cent premium	dollars.	20,350 00
Cost of 4 barrels, packing charges, &c.....	10 75	
Insurance, at ½ per cent, on 20,350	dollars.	101 75
Policy	1 25	
	103 00	
Total cost in New York.....	20,463 75	
The same 20,000 dollars sold in Paris at 5.34 francs	francs.	106,800 00
Charges in Havre—Import duty and permits.....	12 40	
" Cartage, cooperage, postages, &c.....	20 10	
" Freight, ½ per cent on 20,000 dollars	dollars.	50
" Primage, 10 per cent.....	5	
	55	
At 5.25 francs.....	289 75	
Charges in Paris—Freight	114 50	
" Viewing and delivering.....	6 50	
" Brokerage, ½ per cent.....	133 50	
" Commission, ½ per cent.....	334 00	
	1,109 75	
Net proceeds, cash.....	105,000 25	
Add interest of about 45 days, at 4 per cent, until the draft drawn against the shipment becomes due	528 45	
Total.....	106,218 70	

This amount, drawn so as to realise the above 20,463 dollars 75 cents, the rate of exchange would have to be 5.19; which shows that, unless this rate could be obtained for the draft, the shipment would not answer. Without commission in Paris, the result would be 5.21.6, or half per cent more: The steamers charge three-eighths per cent freight, but the additional expense is nearly compensated by the interest of about 15 days, thereby gained.

CHAPTER XXXVI.

MINT OF THE UNITED STATES.

THE earliest metallic currency of each colony consisted chiefly of the coins of the mother country. In Massachusetts; however (and doubtless in all the settlements), specie was so scarce, that for many years it was common to pay taxes, and to carry on internal trade, by transferring at certain rates, cattle, skins, and the products of the soil.* Various considerations, enhanced by the inconvenience and uncertainty of such a medium, induced the Massachusetts colony, in 1652, to establish a mint. The law enacted for that purpose, provided for the coinage of shillings, sixpences, and threepences, to be of the fineness of sterling silver (925 thousandths), and by a reduction of weight, to be "twopence in the shilling of less valew than the English coyne."† This New England mint met with much opposition from the British crown, whose prerogative was supposed to have been invaded by its operations; but it continued in existence more than thirty years, during which time a considerable amount of coin was issued. These coins are now extremely scarce, and indeed are not to be found except in the

See Felt's "Historical Account of the Massachusetts Currency, 1839." This work contains much interesting and valuable information.

† The mint indenture, or contract, required that the shilling should weigh seventy-two grains, and the smaller pieces in proportion. As the English shilling of those days weighed ninety-three grains, there appears an unaccountable miscalculation. An abatement of one-sixth of the value would have made seventy-seven grains and a half.

cabinets of the curious. The shilling only of this mint is known; the best specimens of which, at this day, weigh from sixty-four to sixty-seven grains, and by a recent assay is proved to be 926 thousandths fine; the intrinsic value, therefore, was about sixteen cents and two-thirds. They are a rude kind of coinage, very thin, and of various diameters; and there is some variety in the impressions; but the date of 1652 appears on all of them. The device of a *pine-tree* on one side, has given to the series the common designation of the "pine-tree coinage." They were taken in England at a discount of one-fourth of their colonial value.

In Maryland, silver and copper coins were issued in 1662. These pieces were to be equivalent to the British, but in reality were not much heavier than the shillings coined at Boston.

These were the only silver moneys coined previous to the American revolution. There were various pieces of copper coined at different periods; as, in 1694, the halfpenny for the Carolinas, a twopenny-piece and penny in 1723, another penny in 1733, and a halfpenny for Virginia in 1773. After the revolution, and before the establishment of the national mint, there were various issues of silver and copper, by states, and by individuals.

As the population and trade of the colonies increased, foreign gold and silver coins found their way into the country, and became a part of the circulating medium. These were chiefly the guinea, the joe and half-joe, the doubloon and pistole, in gold; the dollar, the pistareen, and the British shilling and sixpence, in silver. French crowns were not known until the revolution, when they became common. Of the specie currency, the Spanish American dollar, formed the chief circulation, and it became the effective standard, or unit, of the money of the republic.

The pound of the colonies was at first the same as the pound sterling of England, being simply a money of account. This rate, in process of time, became greatly altered, in consequence of excessive issues of paper by the colonial authorities; but, as these issues were greater in some of the colonies than in others, the proportion was both unequal and complicated. The following were the rates of the colonial pounds, in sterling pounds and Spanish dollars, after the revolution:—

N A M E S.	New England and Virginia.	New York and North Carolina.	Middle States.	South Carolina and Georgia.
Pound sterling.....	£ s. d. 1 6 8	£ s. d. 1 15 6½	£ s. d. 1 13 4	£ s. d. 1 0 88.9
Spanish dollar.....	0 6 0	0 8 0	0 7 6	0 4 8

When peace was concluded, Congress directed the financier of the confederation, Robert Morris, to lay before them his views upon the subject of coins and currency. The report was presented early in 1782, and is stated by Mr. Jefferson to have been the work of the assistant financier, Gouverneur Morris.

He first laboured to harmonise the moneys of all the states; and found that the one-thousand four hundred and fortieth part of a dollar (Spanish) was a common divisor for the various currencies. Starting with this fraction as his unit, he proposed the following table of moneys:—

Ten units to be equal to one penny.

Ten pence one bill.

Ten bills one dollar (about two-thirds of the Spanish dollar).

Ten dollars one *crown*.*

The report contains this observation: "Although it is not absolutely necessary, yet it is very desirable, that money should be increased in a decimal ratio; because, by that means, all calculations of interest, exchange, insurance, and the like, are rendered much more simple and accurate, and of course more within the power of the great mass of the people."

The subject was discussed repeatedly in Congress, but no further step was taken until 1784, when Mr. Jefferson, on behalf of a committee appointed for the purpose, brought in a report, disagreeing with that of the financier, except as to the decimal system. The following remarks occur in this document:—"The most easy ratio of multiplication and division, is that of ten. Every one knows the facility of decimal arithmetic. Every one remembers, that when learning money arithmetic, he used to be puzzled with adding the farthings, taking out the fours, and carrying them on; adding the pence, taking out the twelves, and carrying them on; adding the shillings, taking out the twenties, and carrying them on; but when he came to the pounds, where he had only tens to carry forward, it was easy and free from error. The bulk of mankind are schoolboys through life. Certainly, in all cases, where we are free to choose between easy and difficult modes of operation, it is most rational to choose the easy. The financier, therefore, in his report, well proposes that our coins should be in decimal proportions to one another."

He disapproved of the *unit* of Mr. Morris, first, on account of its diminutive size: "A horse or bullock of eighty dollars' value would require a notation of six figures, to wit, 115,200 units;" secondly, because of its want of correspondence in value with any known coins. In lieu of this the Spanish dollar was proposed, as being of convenient size, capable of easy actual division, and familiar to the minds of the people. It was added that the course of our commerce would bring us more of this than of any other foreign coin; and besides, the dollar was all ready as much referred to as a measure of value, as the respective provincial pounds. Upon this basis it was proposed to strike four coins, viz:—

* This last coin was to be of gold. He apologised for introducing the name of *crown*, in a country where that emblem had lost favour, by stating that his project was to have on the coin the representation of an Indian, with a bow in his left hand, and thirteen arrows in the right, with his right foot on a crown.—*Spark's Life of Gouverneur Morris*, i. 273.

A golden piece of the value of ten dollars.

A dollar in silver.

A tenth of a dollar, also in silver.

A hundredth of a dollar, in copper.

The assistant financier conceded something to Mr. Jefferson's views, but adhered to the main principles of his own scheme. But Congress, in 1785, adopted Mr. Jefferson's report, and in the following year made legal provision for a coinage upon that basis.*

All these proceedings were, of course, under the *Confederation*, which lasted from 1778 to 1787. An article in that compact provided as follows: "The United States, in Congress assembled, shall have the sole and exclusive right and power of regulating the alloy and value of coin struck by their own authority, or by that of the respective states." Some of the states issued copper coins during that period. How long they continued current cannot be stated; but at this day those of them that remain are in the custody of coin-collectors. The cent of Massachusetts varies in weight from 148 to 164 grains; the New Jersey piece, 128 to 154 grains; the Connecticut coin is the most irregular, varying from 96 to 144 grains. The Vermont cent, of 1786, weighs about 110 grains. There are also other varieties, particularly the "Nova Constellatio," of thirteen stars, and another piece with the same significant number of *rings*, conjoined, both of which were coined in Massachusetts.†

The constitution of 1787 vested the right of coinage solely in the general government. The establishment of a mint was, however, still delayed. In the report on moneys, weights, and measures, made to Congress, in 1790, by Mr. Jefferson, then secretary of state, it was remarked: "The experiment made by Congress, in 1786, by declaring that there should be one money of account and payment through the United States, and that its parts and multiples should be in a decimal ratio, has obtained such general approbation, both at home and

* The interest taken in this subject by General Washington, and his approval of Mr. Jefferson's plan, appear by the following passage in a letter to Mr. Grayson, member of Congress:—

"I thank you for the several articles of intelligence contained in your letter, and for the propositions respecting a coinage of gold, silver, and copper; a measure which, in my opinion, has become indispensable necessary. Mr. Jefferson's ideas upon this subject are plain and simple; well adapted, I think, to the nature of the case, as he has exemplified it by the plan. Without a coinage, or unless some stop can be put to the cutting and clipping of money, our dollars, pistareens, &c., will be converted, as Teague says, into *five* quarters; and a man must travel with a pair of scales in his pocket, or run the risk of receiving gold at one-fourth less by weight than it counts." (*Writings of Washington*, edited by Sparks, ix. 125.)

† The illustrious father of his country took a lively interest in the national coinage. The mint was repeatedly noticed in his messages to Congress. (See Sparks, xii. 25, 32, 53, 63.) It was his practice, whilst president, to visit the institution frequently; the sent of government being then at Philadelphia.

† In this place it may be proper to notice a coinage of silver, bearing the name of "J. Chalmers, Annapolis," and dated 1788. The specimens reserved in the collection at the mint, are a shilling, sixpence, and threepence, weighing 57, 27, and ten grains respectively; of course very carelessly proportioned.

abroad, that nothing seems wanting but the actual coinage, to banish the discordant pounds, shilling, pence, and farthings of the different states, and to establish in their stead the new denominations."

On the 2nd of April, 1792, a code of laws was enacted for the establishment and regulation of the mint, under which, with slight amendments, the coinage was executed for forty-two years.

The denominations of coin, with their rates, were as follows:—

GOLD. The eagle of ten dollars, to weigh 270 grains, the half and quarter in proportion; all of the fineness of 22 carats, or 917 thousandths.

SILVER. The dollar of 100 cents, to weigh 416 grains; the half-quarter, tenth or dime, and twentieth or half-dime, in proportion; the fineness to be 1485 parts in 1664,* or 892·4 thousandths.

COPPER. The cent, to weigh 264 grains; the half-cent in proportion.

Since the act of 1792, the following alterations in the standards have been made:—

On the 14th of January, 1793, the weight of the cent was reduced to 208 grains; the half cent in proportion.†

January 26th, 1796. President Washington issued a proclamation (as he had been empowered to do by law,) that, "on account of the increased price of copper, and the expence of coinage," the cent would be reduced to 7 dwts. or 168 grains, and the half-cent in proportion. The copper coins have since remained at this standard.

June 28th, 1834. An act was passed, changing the weight and fineness of the gold coins, and the relative value of gold to silver. Before stating the alterations, it may be proper to observe, that the estimate of gold as being worth fifteen times as much as silver, which was the original basis, was found too low at the market value; which, although always fluctuating, was nearer sixteen to one, upon a general average. The effect of the legal proportions was to reduce the coinage of gold, and to restrain its circulation; being always at a premium, the coin was immediately exported to Europe, in the course of trade, and there quickly wrought into other shapes.

In June, 1834, the weight of the eagle was reduced by law to 258 grains (the parts in proportion), of which 232 grains must be fine gold, making the fineness

* This was an arithmetical nicety, deduced from a weight of 416 grains, of which 371½ grains must be fine metal; this being considered the average contents of a Spanish dollar. The estimate was slightly erroneous, and makes our dollar of a little less value; the effect of which has been beneficial to our national coinage, as the difference, though not appreciable in ordinary currency, makes a considerable gain upon recoinage in large sums. See letter of Dr. Moore, late director of the mint, to a select committee of Congress, in 1832.

† The mint was not fully in operation until January, 1795. Before that time it was rather engaged in experimenting; hence the variety of specimens, in silver and copper, anterior to that date, which are now so much in request among the virtuosi. The most noted of these is the Washington cent.

21 carats $2\frac{1}{4}$ car. grains, or $899\frac{325}{1000}$. This was an increase of $6\frac{681}{1000}$ per cent on the former value of gold. The silver coinage was not changed.

The standard of nine-tenths fine, as adopted in France and some other countries, was obviously the most simple, and upon every consideration, the most suitable. To bring the silver coins to that proportion, without changing the amount of fine silver in them, it was only necessary to put less copper, by three grains and a half, in the dollar, reducing its weight to $412\frac{1}{2}$ grains. The weight of the gold was not to be changed, but the fineness increased about three-fourths of one-thousandth, a difference far within the scope of the legal allowance, and hardly appreciable. These proportions were incorporated in a consolidated code of Mint Laws, enacted by Congress, in January, 1837. By that act, the eagle is to be 900-thousandths fine, and to weigh 258 grains; the half and quarter in proportion; and the dollar, at the same fineness, to weigh $412\frac{1}{2}$ grains; the parts in proportion.* The allowed deviation in fineness, for gold, is from 898 to 902; for silver, 897 to 903.†

The following is a recapitulation of the various standards, of the gold and silver coins :—

DATE.	GOLD EAGLE.		SILVER DOLLAR.	
	Weight.	Fineness.	Weight.	Fineness.
	grains.	thousandths.	grains.	thousandths.
Act of April 2, 1792.....	270	916.7	416	892.4
Act of June 28, 1814.....	258	899.2		
Act of January, 18, 1837.....	258	900	412.5	900

Until the year 1835, there was but one mint, which was established at Philadelphia. In that year three *branches* of the mint were created by act of Congress. Two of these, for the coinage of gold only, were to be situated at the towns of Charlotte, in North Carolina, and Dahlonega, in Georgia—central points of the gold mining region: The third branch was for both gold and silver, at New Orleans, the commercial emporium of the south-west. These three institutions, which, in the view of the law are not distinct mints, but rather branches of the mint, are respectively managed by superintendents, who are under the control of the director of the chief mint. The branches went into operation in the year 1838. Their coinage is uniform with that of the establishment at Philadelphia, being systematically tested there for approval.

The whole mint establishment, thus constituted, is itself a branch of the treasury department of the general government, and is under the supervision of the secretary of the treasury.

The whole coinage of the United States, during the year 1843, amounts to

* The relative value, therefore, of silver to gold, is 15.9894 to 1.

† The practical limits here, are, for gold, 899 to 901; silver 898 to 902.

within a small fraction of 12,000,000 dollars, and exceeds, by more than one-half, that of any former year. Of this coinage, more than 8,000,000 dollars is in gold; showing a greater proportion to silver than has heretofore been presented.

The branch mints at Charlotte and Dahlonega, have each coined nearly double the amount which they have reached in any former year, and the New Orleans mint nearly quadruple.

The production of the gold mines of the United States, as indicated by the amount sent to the mints, exceeds that of any former year.

The following is a statement of deposits and coinage at the mint of the United States and branches, for the year ending 31st December, 1843 :—

Rowan Gold Mines.—It is stated in the *Salisbury Watchman*, "that there is in Rowan county, North Carolina, the richest gold mine that has yet been discovered in the United States. It is a small vein, from four to twelve inches wide; many bushels of the material taken from it, have overgone 200 dollars to the bushel, and some as high as 500 dollars." It is also stated in the *Mecklenburg Jeffersonian*, "that 11,876 dwts. of gold had been taken from it by seven hands about a month since. As might be expected, in so small a vein, the water soon became unmanageable, and they began again at the surface, and struck a vein parallel to the first, and nearly as rich as that. These veins, as also all those in that region, are believed to increase in richness and size as they descend.

There are six or eight other mines in the same region, of extraordinary richness and different in many particulars from the other vein mines in North Carolina."

Georgia Gold Mines.—Extract from a letter from a citizen of Georgia to a member of Congress from that state.

"*Dahlonega, June 7, 1842.*

"Mr. Calhoun's mine is still doing wonders; it is the real *El Dorado*. In eighteen days from the time the mine was opened, and ending the 28th ultimo, the amount deposited and assayed at the mint is 6027 dollars 29 cents. The amount dug last week, after burning off the quicksilver, and deposited this morning at the mint is 269 $\frac{1}{10}$ ounces, or 5387 dwts. before melting.

"A mine was discovered in Cherokee about two months since, the product of which, as I am informed by several persons, is one pound of gold per day to four hands.

"The *Augusta (Georgia) Constitutionalist* says, 'It is well, perhaps, that the Dahlonega branch mint has not discontinued, as was proposed last winter—the operations increasing in importance by the recent discovery of more productive veins of gold'."

Silver Mines in North Carolina.—The Washington Mining Company was incorporated by an act of the General Assembly of North Carolina, in January, 1839, with a capital of 500,000 dollars, divided into shares of 100 dollars each. The charter privileges extend to a period of fifty years. The mine worked is situated in Davidson county, North Carolina, ten miles south-east of Lexington.

The estate in which the mining establishment is situated, and on which about sixty buildings have been erected, contains 466 acres, and was sold to the company in 1840, for 479,500 dollars.

In the descriptive portion of the report of 1842, it is stated that, at the forty-foot level, the yield of the ore, when dressed, was about fifty per cent. of lead, and from twenty to 120 ounces of silver to the ton of lead. The value of the silver varied from one dollar eighty cents, to two dollars eighty cents per ounce; its price being enhanced by the large proportion of gold found in combination with it at this depth.

At the sixty-foot level, the ore increased in richness, but was irregular in its value. At its best points, it yielded as much as 5000 ounces to the ton. The general average is stated to be 126 ounces of silver to the ton of metal. Here the sulphuret of lead, or galena, was first met with, in small quantities; but the bulk of the ore continued similar to the forty-foot level, being a carbonate of lead, with the exception of the proportion of gold, which gradually diminished, but was recovered again at the 160-foot level.

Arriving at the 100-foot level, the galena predominated; but, in other respects, the mine presented the same aspect as at the 60 feet, increasing in regularity.

At the 160-foot level, the vein is nearly all sulphuret, as regards the lead, and the area is enlarged. It was estimated, that this argentiferous ore, locally termed "the black ore," produced on an average from eighty-seven dollars fifty cents to 100 dollars per ton, in equal proportions as to value of the lead and the silver, after deducting the expenses of smelting. It was at this level that some masses of rich blue galena were met with, worth at the rate of 1000 dollars per ton.

The Washington mine is situated about eighty miles from Raleigh, the capital of the state, and the present terminus of the great chain of railroad from the north. It is also 100 miles from Fayetteville, the head of sloop navigation on Fear river. The cost of transportation from the mine to Philadelphia, has been generally eighty-five cents per 100 lbs., and has not exceeded one dollar.

From the commencement of the mining operations up to November 1, 1842, a period of twenty-seven months, the actual product was 2661 pigs of argentiferous lead, yielding silver and gold to the amount of 13,288 dollars 68 cents, this being the net value, after deducting the charges of the United States mint for separating the gold from the silver, and alloy requisite to reduce it to the standard of coinage.

The litharge necessarily made in obtaining these results, netted the value of 5499 dollars 11 cents, forming an aggregate value of 18,787 dollars 79 cents. The period embraced by this return was one of heavy expense in erecting buildings and machinery, in sinking the engine shaft, in carrying forward the cross-cut, in expensive explorations, and in much costly work, at a total outlay of 29,824 dollars 84 cents.

The new board of superintendents obtained possession on the 13th of October, 1843, and this statement includes from that time up to the 1st instant, during which time the produce of the mine has been in all 40,379 dollars 47 cents, viz. :—

* Report on the Washington Silver Mine of Davidson County, North Carolina. By Richard C. Taylor. With an Appendix, containing assays of the ores, returns of silver and gold produced, and statements of the affairs of the Washington Mining Company.

GOLD AND SILVER COINS.

The following report has been submitted to Congress by R. M. Patterson, director of the mint, in compliance with a resolution of the House of Representatives. It exhibits the fineness and value by weight of certain foreign gold and silver coins.

GOLD COINS.

COUNTRIES.	Fineness in thousandths.	Value per dwt.	COUNTRIES.	Fineness in thousandths.	Value per dwt.
		cents.			cents.

Mexico, average of various mints, and in the proportion usually presented here.....	897.	115.97			

The value of the gold coins, as ascertained by assay, is, in nearly every case, less than the legal value as established by the act of 8th of June, 1834. This will be seen by the following schedule :

COUNTRIES.	Value by assay.	Value by law.	COUNTRIES.	Value by assay.	Value by law.
	cents.	cents.		cents.	cents.
Gold coins of Great Britain....	94.8	94.62	Great Coins of Spain.....	89.9	89.51

" France.....	93.1	92.92	" " Popayan	89.9	88.68

" The general over-valuation of foreign gold coins (says the director) has its origin in two circumstances ; the first is, that the coins in question were assumed to reach their legal standard ; an assumption not confirmed by our assays. Thus, for example, the fineness of the coins of Great Britain, Portugal, and Brazil, is estimated at 22 carats (corresponding to 916 1-3 thousandths), whereas our assays show the first to be but 915 1-2, and the two last but 914 thousandths. A second cause of this over-valuation originates from the fact, that by the law of January 18, 1837, the standard of our gold coins was raised from 889.225 thousandths to 900, while their weight remained unaltered ; so that the pure gold in our coins is held at a somewhat less nominal value since the change of standard than it was before. A corresponding diminution was of course called for in the legal value given to the pure gold in foreign coins, but it has not yet been made.

" The act of June 28, 1834, is therefore erroneous and impolitic, because it stamps a

greater value upon foreign gold coins than upon our own, and thus misleads the public, and prevents recoinage. It is unnecessary, because the mints of the United States are abundantly sufficient for all the gold coinage required for circulation; and it is inconvenient, because the foreign coins which it makes a legal tender do not correspond in value and denomination with our money of account. I would therefore beg leave, most respectfully, to recommend that the act in question be repealed.

"The Act of June 25, 1834, making Spanish American dollars a legal currency at 100 cents each, and French five-franc pieces at 93 cents each, does not lead to any injustice that I am aware of."

COST OF COINAGE AT THE UNITED STATES MINT AND ITS BRANCHES.

Particulars of the cost of coinage at the several mints of the United States, from a report laid before Congress, March 31, 1842:—

The cost of coining 100 pieces at the New Orleans branch mint was, for 1838, 15 dollars 40 cents; for 1839, 2 dollars 99 cents; for 1840, 1 dollar 50 cents; and for 1841, 1 dollar 41 cents.

The cost of coining 100 pieces at the Charlotte branch mint was, for 1838, 72 dollars 18 cents; for 1839, 35 dollars 30 cents; for 1840, 37 dollars 70 cents; and for 1841, 37 dollars 79 cents.

The cost of coining 100 pieces at the Dahlonega branch mint was, for 1838, 67 dollars 4 cents; for 1839, 42 dollars 62 cents; for 1840, 43 dollars 51 cents; and for 1841, 28 dollars 50 cents.

The actual cost of coining 100 dollars' worth at the Philadelphia mint was, for 1838, 1 dollar 52 cents; for 1839, 2 dollars 7 cents; for 1840, 2 dollars 48 cents; and for 1841, 4 dollars 34 cents; the average of the four years being 2 dollars 23 cents.

The cost of coining 100 dollars' worth at the New Orleans branch mint was, for 1838 154 dollars 6 cents; for 1839, 19 dollars 72 cents; for 1840, 5 dollars 68 cents; and for 1841, 8 dollars 12 cents; the average for the last two years—the first two not being a fair criterion of the average cost, being 6 dollars 68 cents.

The cost of coining 100 dollars' worth at the Charlotte branch mint was, for 1838, 17 dollars 82 cents; for 1839, 9 dollars 3 cents; for 1840, 9 dollars 44 cents; and for 1841, 9 dollars 2 cents; the average of the four years being 10 dollars 59 cents, and that of the last three years 9 dollars 15 cents.

The cost of coining 100 dollars' worth at the Dahlonega branch mint was, for 1838, 12 dollars 43 cents; for 1839, 10 dollars 78 cents; for 1840, 9 dollars 32 cents; and for 1841, 6 dollars 6 cents; the average of the four years being 9 dollars 47 cents.

The actual cost of coining 100 dollars' worth at the Philadelphia mint was, for 1838, 1 dollar 52 cents; for 1839, 2 dollars 7 cents; for 1840, 2 dollars 48 cents; and for 1841, 4 dollars 34 cents; the average of the four years being 2 dollars 23 cents.

The cost of coining 100 dollars' worth at the New Orleans branch mint was, for 1838, 154 dollars 6 cents; for 1839, 19 dollars 72 cents; for 1840, 5 dollars 68 cents; and for 1841, 8 dollars 12 cents. The first of these should be excluded, and perhaps the second, as any foundation for a judgment respecting this mint. The average for the last two years was 6 dollars 68 cents.

The cost of coining 100 dollars' worth at the Charlotte branch mint was, for 1838, 17 dollars 82 cents; for 1839, 9 dollars 3 cents; for 1840, 9 dollars 44 cents; and for 1841, 9 dollars 2 cents; the average of the four years being 10 dollars 59 cents, and that of the last three years 9 dollars 15 cents.

The cost of coining 100 dollars' worth at the Dahlonega branch mint was, for 1838, 12 dollars 43 cents; for 1839, 10 dollars 78 cents; for 1840, 9 dollars 32 cents; and for 1841, 6 dollars 6 cents; the average of the four years being 9 dollars 47 cents; and that of the last three 8 dollars 49 cents.

The cost of coining 100 pieces of coin at the Philadelphia mint was, in 1838, 39 cents; for 1839, 67 cents; for 1840, 79 cents; and for 1841, 1 dollar 12 cents; the average for the four years being 64 cents.

CHAPTER XXXVII.

PUBLIC LANDS IN THE UNITED STATES.

THE public lands, or lands not belonging to individuals or to corporate bodies, were, and continue to be, held, at least administratively, and for sale, as the property of the federal government; but under certain stipulations as bearing on the rights of the respective states, or territories, within which these lands are situated.

The lands lying east of the Mississippi, were, at the close of the revolution, claimed by the several states on the tenure of original colonial charters, which, although general in their terms, extended from sea to sea. At that period, the war had impoverished the coffers, increased the liabilities, and diminished the resources of the United States treasury, and recommendations were accordingly made to the several states, to cede their titles to the western lands in order to aid in the payment of the national debt. In accordance with this recommendation, several of the states ceded their titles to the lands claimed under their original patents.

"The tracts, thus ceded, embrace three separate territories. One of those territories, comprising Ohio, Indiana, Illinois, Michigan, Wisconsin, and Iowa, a tract extending north of the river Ohio and west of Pennsylvania and Virginia, reaching northward to the northern boundary of the United States, and westward to the Mississippi, was originally claimed by Virginia; a state that was in the possession of Vincennes and Kaskaskias, having defended those places during the war of the revolution. Claims to the same territory, were urged by Massachusetts, Connecticut, and New York, which, together with Virginia, ceded to the union their rights to this tract. Georgia ceded to the union its claims to lands lying within the boundaries of the states of Alabama and Mississippi.* North Carolina and South Carolina ceded their claims to land lying within the state of Tennessee."†

The first tract was denominated the north-western territory. For the government of this territory, an ordinance was framed in 1787. The boundaries of the states within the limits of the territory, were fixed by the fifth article of the ordinance: that instrument providing, at the same time, "that there should be formed therein not less than three, nor more than five states." The ordinance declares that "the legislatures of those districts, or new states, shall never interfere with the primary disposal of the soil by the United States in Congress

* Report of the Hon. William Cost Johnson, of Maryland, on the public lands, made in the House of Representatives, March 2, 1843.

† The tract in the state of Ohio, known under the name of the Connecticut reserve, was excepted from the cession by Connecticut. This is now the basis of the Connecticut school fund.

assembled, nor with any regulations Congress may find necessary for securing the title in such soil to the *bonâ fide* purchasers;”* and, also, that “no tax shall be imposed on lands, the property of the United States, and that, in no case, non-residents should be taxed higher than residents.” Upon the same subject, the constitution of the United States expressly provides, that Congress shall have power to dispose of, and to make all needful rules and regulations respecting the territory or other public property of the United States. The ordinance also prescribes, “that, when the several territories shall have attained a certain amount of population, they shall be admitted into the union upon an equal footing with the original states.”

Louisiana was purchased from France in 1803. From the valuable object to be attained by the possession of the control of the entire navigation of the Mississippi, although without any clear constitutional authority, the sum of 15,000,000 dollars was paid.

The territory of Florida was purchased the 22nd day of February, 1819, by treaty concluded between Spain and the United States.

STATEMENT respecting the Lands acquired by the United States of North America, under Deeds of Cession, from the States, and from Foreign Nations.

Territory Northwest of the river Ohio, and East of the Mississippi river, ceded by the States.

* South of 31st degree of latitude.

† South of 31st degree of latitude.

‡ Including the whole north-western territory to the Pacific ocean, and the lands west of the states of Missouri and Arkansas.

§ This quantity of 846,295,680 acres includes the quantity of 132,295,680 acres, south of the La Platte river set apart by government for the emigrant Indians: Also, the 7,082,831 acres, in the territory of Iowa proper, ceded to the United States.

NOTE.—In the foregoing tables, the first column contains the quantity of land embraced in the cession; the second the quantity of land sold to September 30, 1841; the third, the quantity of land remaining unsold; the fourth the quantity of land to which the Indian title is extinguished; the fifth, the quantity of land to which the Indian title is unextinguished. The quantities of land put down in the several states and territories, except Ohio and Indiana, as remaining unsold, were necessarily made up, in a great measure, by estimates, as follows:—From the estimated area of the state, the quantity sold, and otherwise disposed of, was deducted, and the remainder treated as land remaining to be sold.

By treaties with the Indian tribes, large tracts of their territories have been ceded to the United States. In respect to the Aborigines on their lands, a writer in the *Mechanics' Magazine* remarks—

“Upon their own soil and among themselves, so far as their rights of person are concerned, the governments of those tribes are considered independent governments. It is true, that the government of the United States has assumed the right of purchasing their land to the exclusion of every other purchaser; but the territory of the Indians has never been offered for sale, by this country, without a fair and full purchase of their title. The first treaty made with them by us, was that of Greenville, in 1795; and as it may be considered a model of subsequent treaties, and may exhibit the tone of our policy regarding them, we would designate its general terms. By this treaty, perpetual peace is established; the Indians acknowledge themselves under the protection of the union, and engage to sell their lands to them only. Certain regulations, to be preserved between the two parties to the treaty, are embodied; and, in return, the United States engage to protect the Indians, to pay them in goods to a certain amount, and to make them certain annual stipulated payments. The relation of the government to the Indian tribes within our borders, is analogous to that of a guardian to a ward, and we trust that our intercourse with them will ever be charged with such responsibilities and duties.”

Upon the public domains which formerly belonged to England, France, and Spain, various claims have been made by individuals to tracts, either by virtue of occupancy, or under the title of grants, made by those governments, before the lands were ceded to the United States. In order to adjust those claims, or rights, commissioners have been appointed by several acts of Congress to examine the validity of those titles or claims, to decide upon them, or to report the facts upon which they are founded, to Congress. Titles derived from legitimate authority, have been confirmed; and claims have also been confirmed upon grounds of equity, although the legal titles had not been perfect.* In 1787, one

* Reports of these Land Boards are included in the American State Papers.

million and a half of acres was sold to the Ohio company, by which the state of Ohio was first colonised. Two years afterward, a contract was made with Mr. John Cleves Symmes, for the purchase of a million and a half of acres between the Great and Little Miami; but in consequence of the failure of the payment of the purchase money, the patent conveyed a much smaller tract.

The first act of Congress for the sale of public lands limited the sale to tracts of not less than four thousand acres each. This plan might have been convenient, but it was eminently favourable to land jobbing, by confining the purchase to a few rich persons, while those with small means were excluded from making such purchases from the government, and consequently obliged to pay high prices to the jobbers. In July, 1790, Alexander Hamilton, then secretary of the treasury, brought forward a scheme for the sale of the public lands, which provided—

“That the tracts set apart to each settler, should not exceed 100 acres; that the prices of the land sold under special contract, should be thirty cents per acre, payable in gold or silver, or in public securities, computing those bearing an interest of six per cent per annum, the same as gold and silver, and those bearing a future or less interest at a proportionate value. In every instance of credit it was required, that one quarter should be paid down, and independent security be given for the residue, and that all surveys of the land should be made at the expense of the purchaser.”

Another law was passed by Congress in 1800, which facilitated the sale of the public lands, and a report was made in the House of Representatives, on the 23rd of January, 1804, recommending “a reduction of the size of the tracts offered for sale.

The minimum price for the public land, previous to the year 1800, was two dollars per acre, one-fourth of which was required to be made at the time of the purchase, and the remainder in three annual instalments, a discount of eight per cent being allowed if the purchaser paid in advance. Jobbers continued to purchase land extensively. Many of those jobbers, speculating on credit, were ruined. They were aided by the banks to an extent that was, among other causes, fatal both to the jobbers and to the banks.

The system now adopted for the survey, sale, and distribution of the public land appears, from the report of the commission of the general land office, to combine many facilities to purchasers and settlers. The tracts ordered to be brought into market are first surveyed and divided into townships of six miles square, and subdivided into sections of one square mile, each containing six hundred and forty acres. The lines are run parallel to the cardinal points, and cross each other at right angles, excepting where they are formed by an Indian boundary line, or the course of a stream. The sections are subdivided into quarter, half-quarter, and quarter-quarter sections, the first containing one hundred and sixty acres, the second eighty, and the third forty; their dimensions

being accurately ascertained by fixed rules which are prescribed by law. The survey is performed by two principal surveyors, by whom their deputies are appointed, all being under the direction of the commissioner of the general land office, in Washington. The townships are ranged and numbered, and the sections in each township are also numbered from one to thirty-six. The parallels of surveys are based upon a series of true meridian lines. One principal meridian line is in Ohio, the second in Indiana, the third in Illinois, and the rest in other states, each constituting the parallel of a series of surveys, which divides the whole territory into squares, defined with accuracy in parallel ranges, by "*blazing*" the trees, a process that is performed by cutting with a hatchet the bark and a little of the wood from the sides of their trunks. The precision of these modes of survey prevents disputes regarding boundary lines.

When the lands are surveyed, a land office is established in each district, and on the day named by the President of the United States, a public sale of land takes place, the whole being offered in the market to the highest bidder, above the fixed minimum price of one dollar and a quarter per acre. The tracts remaining unsold, are then offered to the public at private sale, and may be purchased at the land offices at the minimum price. One section in each township, that is, one thirty-sixth part of the land, is reserved, perpetually, to maintain common schools within the township. One entire township, comprising 23,040 acres is also reserved in each state and territory, for the maintenance of higher seminaries of education. Five per cent are reserved on the amount of sales in each state, three-fifths of which are required to be expended by Congress in the making of roads through the state, and two-fifths for the diffusion of useful knowledge. All salt springs and lead mines are reserved to the government.

In each district, the duties of the land office are performed by a register and receiver; the register sells the land, and the receiver collects the payments. Each of these officers keeps his own records, performing his functions independent of the other, and holding separate responsibilities. They are each required to keep separate accounts, to make periodical reports to the general land office at Washington, the one of sales, and the other of receipts: each officer being considered as a check upon the other. All tracts are so marked and numbered upon the books of the land offices, that a purchaser may select a tract the register and receiver having only to receive the money and give the vouchers for a title. Each purchaser is then granted an original patent from the government, as the most perfect title to the soil.

QUANTITY of Land granted to each of the States and Territories, and the Purposes for which granted—up to February 7, 1839.

CHAPTER XXXVIII.

FINANCES OF THE UNITED STATES.

THE federal credit of the United States has been honourably maintained from the commencement of the revolutionary war down to the present period; and we believe that nothing but the certain calamities, which would attend, and be consequent to, a war, will ever disturb the faithful discharge of the fiscal obligations of the federal government.

In Europe a very erroneous estimate, and very unjust conclusions have been entertained, we believe generally from ignorance, by confounding the non-paying and repudiating states, with the revenue, debt, and expenditure of the federal government, and of the states who have honourably, and religiously, discharged their obligations.

The revolutionary war having altogether interrupted the exterior commerce of the country, there was no revenue raised during that period by customs duties; and as Congress had not then the power to levy any general tax, loans and paper-money became the inevitable expedient.

The following passages, which occur in Mr. Henry Lee of Boston's Letters to cotton manufacturers, are worthy of attention.

" War taxes and expenditures—by decreasing the pecuniary means of the great mass of a nation—operate unfavourably on the consumption of commodities.

" The average annual expenditure for the army and navy of Great Britain, from 1801 to 1813, amounted to \$14,096,092 dollars, and in one of the last years of the war it came up, including the interest on the war debt, to the enormous sum of 488,538,946 dollars—two-thirds of which was expended for armies mostly engaged in fighting the battles of foreign nations in foreign lands. The war, during every period of its prosecution, was termed a '*successful*,' a '*glorious war*'—to which the most ambitious portion of the nation were reconciled, by the hope of '*national glory*,' or of personal distinction; while the more unreflecting, or the more sordid portion of it were willing or eager for its continuance—upon the supposition of enjoying a monopoly of the commerce and navigation of the world.* In the latter sentiment, many of the people of this country sympathised, and from similar motives—till, at last, we were drawn into its vortex, by a desire, on the part of the thoughtless, or the ambitious portion of the nation, of adding, also, to our fund of '*national glory*'—and that, we believe, was the only benefit which the promoters and advocates of that gratuitous war ever pretended had been realised—since the questions of impressment and blockade, which were the ostensible causes of the war, were not only left unsettled, but may, perhaps, have not even been subjects of discussion in the negotiations at Ghent for a termination of the war, a war which ended, as most wars have done, with the accomplishment of no better purpose than the gratification of the ambition of its most zealous and leading fomenters—and the gratification of the passions of the people, who were led into a belief that the war would be productive of national advantages—superadded to the gratification of those belligerent feelings which, in this country, as much, if not more than in most countries, are easily excited by the popular favourites of the day. Of that portion of the war-party who may have been prompted by more patriotic motives, and by a sincere expectation of benefiting their country by a war—there was an utter disappointment of their wishes and expectations—and such, in all probability, would have been the issue of the wars in which some of our most popular and influential public men appear to have been desirous, judging by their sentiments, speeches, and conduct, at various periods, of involving the nation.

" A reflection made by Mr. John Q. Adams upon the effects of war with Great Britain, may not be considered as inappropriate in connexion with this subject. The ex-president in a communication before the public, in which reference is made to some of the schemes for improving the currency that were in agitation in 1837, adds: 'I think of this as I thought of the dry-dock, gun-boat, restrictive, anti-navy system of Mr. Jefferson. *It cost the nation a terrible war to be delivered of that, but the nation was effectually cured of its hydrophobia. The war was a drastic purge, but it effectually worked its cure.*'

" Well, most wars originate in *hydrophobia*—in the *sadness* of the people—to which they are excited by their rulers, and for no other purpose than the gratification of their selfishness and ambition, and although they terminate with the application of a '*drastic purge*,' or some still more bitter curative, yet there is no security against the returning *madness of the people*—at least not till the great mass of them, through all ranks of society, shall become more enlightened, more moral, more religious—more patriotic—more virtuous—than they now are—or, according to present appearances, are likely to become in this day and generation.

" The last war between the United States and Great Britain, of only two and a half years' continuance, and with but a very inconsiderable portion of the military and naval power of that country brought into action—cost us upwards of 100,000,000 dollars. This sum was not raised by indirect taxation in the form of duties on imported goods—because a war with any great naval power will always, in this country, reduce that branch of business to a very low point. In 1812, we imported 77,080,000 dollars. In the subsequent year of the war, our imports declined to 22,005,000 dollars, and in 1814, to 12,963,000 dollars; while our exports, in 1814, sunk to the insignificant sum of 6,927,441 dollars.

" There must necessarily be an almost entire cessation of revenue from customs in a war with any great naval power, and consequently a substitution of direct taxes—but a direct taxation, to any considerable extent, is one of those functions of government which, in this country, has never yet been exercised, and when exercised to a very limited degree has been resisted in some of the states, and left unpaid in a still greater number of them—the only mode, then, of obtaining the increased amount of funds

* It is true we prospered during that disastrous period—not, however, from the effects of these wars, but in spite of them. The effects of those wars were, no doubt, injurious to us, though less so than if we had been always a party to them; but there were other causes in operation, which more than counterbalanced the pecuniary evils of those wars, and we prospered, though in a less degree, than we should have done in a time of peace.

for the prosecution of a war, seeing the disinclination of the nation to direct taxation, is the borrowing at home or abroad. That mode of meeting even our peace expenditure, has been practised upon the past three or four years.

"Nor was the last war with Great Britain supported by means of direct taxes, for the whole amount received from that source of supply, in 1813, 1814, and 1815, was but 4,383,975 dollars—and that, too, paid in depreciated currencies, averaging, perhaps, a discount, on a sound currency, of twenty per cent. In truth, the entire war expenditure was paid out of the proceeds of loans and treasury notes—constituting a debt, at the close of the war, of about 100,000,000 dollars—superadded to its pre-existing amount. These loans were effected on such high rates of interest, and the payments on their account were in such depreciated currencies, as to have cost the country at least twenty-five per cent more than they received—the stocks issued by government having subsequently been paid to their holders in a sound and honest currency of a full standard value. Nevertheless, there were propositions before Congress, and before the country, for issues of governmental paper-money, which, had they been sustained and acted upon, might have reduced the value of the certificates of the public debt to a level with the old '*continental money*'—and had the war been of much longer continuance, it may be reasonably inferred that such would have been the fate of the national creditors.

"Short as the war was, and inconsiderable as were the expenses of conducting it, in comparison with the resources of the country, the credit of the government was so bad, arising from the indisposition of the nation to pay direct taxes—and from a similar unwillingness of our rulers to hazard their popularity in recommending and levying of taxes; that before the war was concluded, the government stocks, bearing high rates of interest, were below sixty-five for 100 dollars, and any further issues would probably have sunk them to almost the present level of the stocks of some of the bankrupt states."

The revenue of the United States has, since the war of independence, been chiefly derived from the duties upon articles of foreign produce and manufactures, imported either by American or foreign ships. Tonnage duties have also been levied by the customs. Next to the customs, the greatest source of revenue has been derived from the sale of public domains. Internal or excise taxes have occasionally been imposed, but they were universally considered obnoxious, and were continued only for short periods. Before the year 1802, excise duties were imposed on manufactured snuff, refined sugar, sales at auction, licences to retail wines, and distilled spirits, stamped paper, and on carriages for the conveyance of persons; but these were all repealed in that year. During the late war between the United States and Great Britain, duties on most of these articles were renewed; and duties were, also, imposed on various domestic manufactures. But, soon after the return of peace, all these excise taxes were repealed.

Some additions have been made to the revenue (but deemed small additions) from the Post-office, from taxes on patents, and from dividends on bank stock. Direct taxes have been levied at four different times only, since the revolution. On the 1st of July, 1812, immediately after the declaration of war against Great Britain, 100 per cent was added to all the permanent duties on imports, to continue only during the war; but these were afterwards continued until the 30th of June, 1816.

The power of a nation in modern times, as all admit, depends, materially, as well as politically, chiefly on the amount of unencumbered revenue it can raise, without oppression to the people.

In financial legislation slight burdens may prove incentives to greater industry. Grievous taxation, which may be exacted and even raised for a cer-

tain not definable period, discourages public thrift. War and profligacy by increasing expenditure, if that expenditure be greater than the natural annual revenue, taxes the industry of the existing generation as well as that of one or more succeeding generations. Hence arise generally all the perplexities of finance.

The extreme natural revenue to be derived from taxing a nation should never exceed the sum which can be spared for paying the reasonable expenses of an honestly and wisely administered government,—and for defraying the expense of defending the country against aggression, without deducting a greater sum from the general income yielded by labour, than an amount which leaves the full average means of a wholesome subsistence, comfortable lodging, and adequate clothing for the population.

The extreme natural revenue, and the general wealth of the nation which yields it, will be greater or less in proportion to the number of its inhabitants, in the same ratio that the greater ingenuity and labour, or the greater ignorance and idleness of the population, yields the greater or lesser amount in value of commodities. This amount again will be regulated in the cost of production, by the prices of raw material and food, and the outlay of fixed capital. The value of the produce of labour at home, and in all the markets of the world, will depend upon the power of selling and buying, and upon the natural demand for consumption. The more the interchange of the commodities of any one place is restricted, or obstructed, from the markets of another, the more will the quantity of those commodities, wherever produced, be restricted, and obstructed, in the selling, buying, and consumption. On examining the various customs tariffs passed at different periods by the Congress of the United States, we are forced to declare, that they exhibit an extraordinary absence of that wisdom, sagacity, and sound principles, which, in other respects, distinguish the great legislators of America. On fiscal, as well as commercial principles, the various American tariffs are only worthy of being classed with the illiberal barbarisms, and fallacies, which have disgraced the worst legislation of European nations. We will endeavour to prove this under a separate head, and in the mean time only remark, that the only defence, a very inexcusable one it is true, that can be made on the part of America, is, that the latter followed the very bad example persevered in by England.

The following tabular statements, compiled from official returns, will serve to illustrate the financial administration of the United States.*

The following estimate was made out by Mr. Nourse, the registrar of the treasury, in 1790.

* See also the organisation of the treasury, under the head of the "Civil Department of Government."

" General Abstract of the Annual Estimates, and Abstract Statements of the Total Amount of the Expenditures and Advances, at the Treasury of the United States.

" The estimated amount of the expenditures of

		dollars.	cts.
1773) in specie		23,064,026	64 3/4ths
1774) ditto		24,980,418	83 do.
1775) ditto		24,209,435	86 do.
1776) ditto		19,704,691	63 do.
1777) ditto		19,041,000	60 do.
1778) ditto		19,012,465	50 do.
1779) ditto		18,342,745	85 do.
1780) ditto		23,280,085	43 do.
To Nov. 1st, 1784) ditto		248,225	63 do.
Forming an amount total of		224,883,093	15 2/3

" The foregoing estimates being confined to actual treasury payments, are exclusive of the debts of the United States, which were incurred, at various periods, for the support of the late war, and should be taken into a general view of the expense thereof, viz.:

	dollars.	cts.
Arms, debt, open, commissioners' certificates, &c.	11,086,758	1 3/4ths
For supplies furnished by the citizens of the several states, and for which certificates were issued by the commissioners, &c.	3,723,725	29 do.
For supplies furnished in the quartermaster, commissary, hospital, clothing, and marine department, &c.	11,911,179	3 do.
For supplies, on accounts settled at the treasury, and for which certificates were issued by the register, &c.	241,638	64 do.
For foreign expenditures civil, military, naval, and contingencies, amount, by computation, to	16,016,097	25 do.
The expenditures of the several states, from the commencement of the war, to the establishment of peace, cannot be stated with any degree of certainty, because the accounts do not remain to be settled. But as the United States have granted certain sums for the relief of the several states to be funded by the general government, therefore, estimate the total amount of said assumption	21,000,000	00

Estimated expense of the late war, in specie 125,153,793 60 dollars.

" The advances made from the treasury, were principally in a paper medium, called continental money, and which in a short time depreciated: the specie value of which is given in the foregoing estimate. The advances made at the treasury of the United States, in continental money, in new and old emissions, are estimated as follows, viz.:

	OLD EMISSION.			NEW EMISSION.	
	dollars.	cts.		dollars.	cts.
In 1776	78,028,031	81 do.			
1777	67,068,576	34 do.			
1778	149,748,596	77 do.			
1779	825,661,180	47 do.	801,236	8 1/4ths	
1780	11,086,095	60 do.	1,179,749	00 do.	
1781					
	327,478,341	43 do.		1,979,985	80 do.

" In a report made to Congress, by the Board of Treasury, in September, 1787, it is stated, that the requisitions upon the states, for the payment of the interest of the domestic debt, in the years 1782, 1783, 1785, and 1786, amounted to the sum of 6,279,376 dollars 27 cents, and the Board say, " it is with regret we are constrained to observe, that to the 31st of March last, the aggregate payments, on account of these requisitions, do not appear, from any document in the Treasury office

	dollars.	cts.
To exceed the sum of	1,003,725	57
Leaving a balance of interest due of no less than	5,275,650	60
	6,279,376	27

REVENUE FROM THE SALE OF PUBLIC LANDS.

Under the head of Public Lands of the United States, Tabular Statements of Revenue derived from Sales will be found.

POST OFFICE.—See Post Office of United States for Revenue derived from.

DIRECT TAXES.

Although direct taxes are levied under laws passed by the legislatures of particular states (which see), direct taxation has always been considered odious when levied by the general government. The following statements are chiefly on the authority of Mr. Pitkin. "By the Constitution," he observes, "direct taxes, when laid, are to be apportioned among the states in the same manner as representatives, including three-fifths of the slave population. This part of the Constitution was a compromise between the slave-holding and non slave-holding states; the former, agreeing to pay direct taxes, according to the ratio of their representation. Notwithstanding this, four direct taxes only have been laid from the commencement of the government—the slave-holding states, therefore, have enjoyed the benefits of this compromise without feeling much of its burdens.

"The first direct tax was imposed July 14th, 1798, being 2,000,000 dollars, and was apportioned agreeable to the constitution. It was laid upon all dwelling houses, and lands, and on slaves between the ages of twelve and fifty, in the following manner, viz. :—

"Upon every dwelling-house; which, with the out-houses, appurtenant thereto, and the land whereon the same was erected, not exceeding two acres, shall not be valued at more than 100 dollars, and not more 500 dollars, a sum equal to one-tenth of one per cent on the amount of valuation.

At more than 500 dollars, and not more than 1,000 dollars, three tenths of one per cent.

do.	1,000	do.	do.	3,000	do.	four tenths of	do.
do.	3,000	do.	do.	6,000	do.	five tenths of	do.
do.	6,000	do.	do.	10,000	do.	six tenths of	do.
do.	10,000	do.	do.	15,000	do.	seven tenths of	do.
do.	15,000	do.	do.	20,000	do.	eight tenths of	do.
do.	30,000	do.	do.	30,000	do.	nine tenths of	do.

And on all dwelling-houses, valued at more than 30,000 dollars, one per cent.

"Upon every slave enumerated (and such as 'from fixed infirmity or bodily disability were incapable of labour,' were not to be enumerated) there was assessed fifty cents.

"After deducting the sums thus assessed upon dwelling-houses and slaves, within each state, from the sum apportioned to such state, the remainder was assessed upon the lands in such state, according to the valuation made, in pursuance of law, and at such ratio per centum as should be sufficient to produce the said remainder.

	acres.	Value, dollars.
"The number of acres of land in the United States, then valued, was	163,746,688	479,293,263
"The number of dwelling-houses over 100 dollars was	276,095	140,683,984

"Making for both 619,977,247

"The number of slaves enumerated was 393,219.

"The proportion of the two millions assessed upon houses was . . . 471,988

"Upon lands 1,327,713

"Upon slaves 196,609

"The second direct tax was laid the 2nd of August, 1813, being 3,000,000 dollars, and was apportioned among the states on the census of 1810; and the sums thus apportioned were divided to each county in the state.

"A difference in the value of lands and houses in different counties produced a great inequality in the sums paid by individuals in the same state, though possessed of lands

valued \$750,000; and showed the injustice of the modes of apportioning each state's quota among the several counties.

"Such was the low state of the public funds, at the commencement of the year 1815, in consequence of the failure of the imposts, and the impossibility of obtaining loans, an act, passed on the 9th of January of that year, Congress laid an annual direct tax of 6,000,000 dollars; and it was laid, as the title of the act declares, 'for defraying the expenses of government, and maintaining the public credit.'

"We would here observe, that peace having taken place, the act laying the annual 6,000,000 dollars tax, was repealed on the 5th of March, 1816, and a tax of 3,000,000 dollars only, was laid for that year."

Receipts of the Treasury of the United States from all Sources, from 1791 to 1832.

			Ditto, 1836.....	12,000,000
1st of January, balance in treasury.....	88,928,149			

Balance in the treasury, 1st of January, 1837, 44,839,494 dollars 96 cents, which, according to various deductions made by the secretary of the treasury, was reduced to about 42,000,000 dollars, all of which, except 5,000,000 dollars, was transferred to the several state deposit banks. The treasury having ceased to make loans until 1840, the necessity for which was attributed by one party to the surplus being deposited in the state banks.

REVENUE AND EXPENDITURE FROM JULY 1, 1843, TO MARCH 1, 1844.

From a subsequent report of the Secretary of the Treasury, made up to February 29th, 1844, we gather the following particulars:

	dolls. cts.	dolls. cts.
The balance in the treasury on the 1st July, 1843, was.....	10,134,307 33
The receipts from that time till 29th February, 1844, were		
From Customs.....	18,102,688 56	
Lands.....	1,327,082 79	
Incidentals.....	84,206 02	
Loan of 1843.....	78,231 35	
Treasury notes.....	1,212,800 00	
Total.....	19,511,901 02
The payments for the same period have been		
For civil list, miscellaneous, and foreign intercourse.....	3,530,063 18	
Military.....	6,174,485 13	
Naval.....	4,703,986 13	
Reimbursing treasury notes.....	9,758,211 49	
Interest on treasury notes.....	547,286 67	
Interest on public debt.....	647,134 57	
Total.....	25,261,648 93
Balance in the treasury, 1st March, 1844.....	3,567,432 64

From these data it would appear, that the amount of the national debt, including treasury notes, as a part of said debt, has been reduced 7,778,680 dollars 14 cents, between the 1st of July, 1843, and the 29th of February, 1844. Thus:

Amount of treasury notes redeemed.....	dtrs. cts.	dtrs. cts.
Amount received for treasury notes.....	1,612,800 00	9,728,711 41
Receipts for loans for 1843.....	79,431 35	
		1,980,031 35
Showing a reduction of indebtedness of.....		7,778,680 14

From the annual report of Mr. R. J. Walker, Secretary of the Treasury, we extract the following :

" TREASURY DEPARTMENT, December 3rd, 1845.

" In obedience to the ' Act supplementary to the act to establish the Treasury Department,' the undersigned respectfully submits the following report.

" The receipts and expenditures for the fiscal year ending the 30th of June, 1845, were as follows :

Receipts and Means for the Year ending the 30th of June, 1845.

	dls.	cts.
From customs.....	37,328,112	70
From sales of public lands.....	2,077,022	30
From miscellaneous sources.....	163,998	56
Total receipts.....	39,569,133	56
Add balance in treasury July 1, 1844.....	7,837,379	64
Total means.....	47,406,513	20
The expenditures during the same fiscal year amounted to.....	49,068,266	94
Leaving a balance in treasury July 1, 1845, of.....	7,658,246	22

The estimated Receipts and Expenditures for the fiscal Year ending the 30th of June, 1846, are:

RECEIPTS.

	dls.	cts.
From customs, first quarter, by actual returns.....	9,861,872	14
For second, third, and fourth quarters, as estimated.....	13,638,067	56
Total from customs.....	23,500,000	10
From sales of public lands.....	2,000,000	00
From miscellaneous and incidental sources.....	120,000	00
Total receipts.....	25,620,000	10
Add balance in treasury 1st July, 1845.....	7,837,346	22
Total means as estimated.....		33,457,346 32

EXPENDITURES.

The actual expenditures for first quarter, ending the 30th of September, 1845.....	8,463,092	41
The estimated expenditures for the other three quarters, from the 1st of October, 1845, to 30th of June, 1846, are:		
For civil list, foreign intercourse, and miscellaneous purposes.....	6,739,211	06
Army proper.....	2,504,733	06
Fortifications, ordnance, arming militia, &c.....	3,246,775	52
Indian department.....	1,649,781	94
Pensions.....	1,338,536	02
Interest on public debt and treasury notes.....	835,978	45
Redemption of residue of loan of 1841.....	22,500	00
Treasury notes outstanding.....	757,764	14
Naval establishment.....	4,202,000	03
Total.....		29,027,031 50
Which deducted from total means above stated, will leave in treasury on the 1st of July, 1846, an estimated balance.....		4,430,314 32

* But this balance is subject to be decreased by such additional appropriations as Congress shall make, to be expended during the fiscal year ending the 30th of June, 1846, and to be altered by the sums which may be presented for payment of the old funded and unfunded debt, and old treasury notes.

The estimated Receipts, Means, and Expenditures for the fiscal year commencing the 1st of July 1846, and ending the 30th of June, 1847, are as follows:

RECEIPTS

	dls.	cts.
From customs for the four quarters.....	22,500,000	10
From public lands.....	2,000,000	00
From miscellaneous and incidental sources.....	100,000	00
Total.....	25,000,000	10
Add estimated balance to be in treasury the 1st of July, 1846.....	4,511,334	32
Total estimated means for fiscal year ending the 30th of June, 1847...		29,511,334 32

EXPENDITURES.

The estimated expenditure during the same period, viz:		
The balance of the former appropriations which will be required to be expended in this year.....	1,441,437	19
Permanent and indefinite appropriations.....	2,997,913	72
Specific appropriations asked for this year.....	21,079,440	43
Total estimated expenditures.....	25,518,813	25
Which is composed of the following particulars, viz:		
Civil list, foreign intercourse, and miscellaneous.....	5,925,292	62
Army proper.....	3,364,456	02
Fortifications, ordnance, arming militia, &c.....	4,331,809	52
Pensions.....	2,507,100	00
Indian department.....	2,214,916	15
Naval establishment.....	6,139,350	45
Interest on public debt.....	835,844	72
Which, deducted from the total of means before stated, gives an estimated balance on the 1st of July, 1847, of.....		4,332,441 07

THE TARIFF.—The receipts for the first quarter of this year are less by 2,011,885 dollars 90 cents, than the receipts of the same quarter last year. Among the causes of decrease is the progressive diminution of the importation of many high-protected articles, and the substitution of

rival domestic products. For the nine months ending June 30, 1843, since the present tariff, the average of duties upon dutiable imports was equal to 37 dollars 84 1-10 cents per cent; for the year ending June 30, 1844, 33 dollars 85 9-10 cents per cent; and for the year ending June 30, 1845, 29 dollars 90 per cent—showing a great diminution in the average per centage, owing in part to increased importation of some articles bearing the lighter duties, and decreased importations of others bearing the higher duties. The revenue from ad valorem duties last year exceeded that realised from specific duties, although the average of the ad valorem duties was only 23 dollars 57 cents per cent, and the average of the specific duties 41 dollars 30 cents—presenting another strong proof that lower duties increase the revenue. Among the causes tending to augment the revenue, are increased emigration and the annexation of Texas. The estimates for the expenditures of 1846 are based chiefly upon appropriations made by Congress. The estimated expenditures of 1847 are founded upon data furnished by the several departments, and are less by 4,108,238 dollars 65 cents than those of the preceding year. These estimates are submitted in the full conviction that, whenever Congress, guided by an enlightened economy, can diminish the expenditures without injury to the public interest, such retrenchment will be made so as to lighten the burden of taxation, and hasten the extinguishment of the public debt, reduced on the 1st of October last to 17,057,445 dollars 52 cents.

In suggesting improvements in the revenue laws, the following principles have been adopted:

1st. That no more money should be collected than is necessary for the wants of the government, economically administered.

2nd. That no duty be imposed on any articles above the lowest rate which will yield the largest amount of revenue.

3rd. That, below such rate, discrimination may be made, descending in the scale of duties; or, for imperative reasons, the articles may be placed in the list of those free from all duty.

4th. That the maximum revenue duty should be imposed on luxuries.

5th. That all minimums, and all specific duties should be abolished, and ad valorem duties substituted in their place—care being taken to guard against fraudulent invoices and under-valuation, and to assess the duty upon the actual market value.

6th. That the duties should be so imposed as to operate as equally as possible throughout the Union, discriminating neither for nor against any class or section.

No horizontal scale of duties is recommended; because such a scale would be a refusal to discriminate for revenue, and might sink that revenue below the wants of the government. Some articles will yield the largest revenue at duties that would be wholly or partially prohibitory in other cases. Luxuries, as a general rule, will bear the highest revenue duties; but even some very costly luxuries, easily smuggled, will bear but a light duty for revenue, whilst other articles, of great bulk and weight, will bear a higher duty for revenue. There is no instance within the knowledge of this department, of any horizontal tariff ever having been enacted by any one of the nations of the world. There must be discrimination for revenue, or the burden of taxation must be augmented, in order to bring the same amount of money into the treasury. It is difficult also to adopt any arbitrary maximum, to which an inflexible adherence must be demanded in all cases. Thus, upon brandy and spirits a specific duty, varying as an equivalent ad valorem from 180 to 261 per cent yields a large revenue, yet no one would propose either of these rates as a maximum. These duties are too high for revenue, from the encouragement they present for smuggling these baneful luxuries; yet a duty of 20 per cent upon brandy and spirits would be far below the revenue standard, would greatly diminish the income on these imports, require increased burdens upon the necessities of life, and would revolt the moral sense of the whole community. There are many other luxuries which will bear a much higher duty for revenue than 20 per cent; and the only true maximum is that which experience demonstrates will bring, in each case, the largest revenue at the lowest rate of duty. Nor should maximum revenue duties be imposed upon all articles; for this would yield too large an income, and would prevent all discrimination within the revenue standard, and require necessities to be taxed as high as luxuries. But, whilst it is impossible to adopt any horizontal scale of duties, or even any arbitrary maximum, experience proves that, as a general rule, a duty of 20 per cent ad valorem will yield the largest revenue.—There are, however, a few exceptions above, as well as many below this standard. Thus, whilst the lowest revenue duty on most luxuries exceeds 20 per cent, there are many costly articles, of small bulk and easily smuggled, which would bring perhaps no revenue at a duty as high as 20 per cent; and even at the present rate, 7½ per cent, they will yield in most cases a small revenue; whilst coal, iron, sugar and molasses, articles of great bulk and weight, yielded last year six millions of revenue, at an average rate of duty exceeding 60 per cent, ad valorem. These duties are far too high for revenue upon all these articles, and ought to be reduced to the revenue standard; but if Congress desire to obtain the largest revenue from duties on these articles, those duties, at the lowest rate for revenue, would exceed 20 per cent, ad valorem.

WAREHOUSING SYSTEM.—Prior to the 30th of June, 1842, a credit was given for the payment of duties, since which date they have been collected in cash. Before the cash duties and the tariff of 1842, our trade in foreign imports re-exported abroad afforded large and profitable employ-

ment to our merchants and freight to our commercial marine, both for the inward and onward voyage; but since the last tariff this trade is being lost to the country, as is proved by the tables hereto annexed. The total amount of foreign imports re-exported during the three years since the last tariff, 18th of free and dutiable goods, is 33,384,394 dollars—being far less than in any three years (except during the war) since 1793, and less than was re-exported in any one of eight several years. The highest aggregate of any three years was 173,103,813 dollars, and the lowest aggregate 41,315,703 dollars—being in the years 1794, 1795, and 1796. Before 1820, the free goods are not distinguished in this particular from dutiable goods; but since that date the returns show the following result: during the three years since the tariff of 1842, the value of dutiable imports re-exported was 12,590,811—being less than in any one of seven years preceding since 1820, the lowest aggregate of any three years since that date being 14,918,444, and the highest 57,727,298. Even before the cash duties, for five years preceding the high tariff of 1828, the value of dutiable goods re-exported was 24,796,241 dollars; and for the five years succeeding that tariff, 66,784,192 dollars—showing a loss of 28,020 dollars 49 cents of our trade in foreign exports after the tariff of 1828. The great diminution of this most valuable branch of commerce has been the combined result of cash duties and of the high tariff of 1842. If the cash duties are retained, as it is believed they should be, the only sure method of restoring this trade is the adoption of the warehousing system, by which the foreign imports may be kept in store by the government until they are required for re-exportation abroad, or consumption at home—in which latter contingency, and at the time when for that purpose they are taken out of these stores for consumption, the duties are paid, and, if re-exported, they pay no duty, but only the expense of storage. Under the present system, the merchant introduces foreign imports of the value of 100,000 dollars. He must now, besides the advance for the goods, make a further advance in cash, in many cases of 50,000 dollars for the duties. Under such a system but a small amount of goods will be imported for drawbacks; and the higher the duty the larger must be the advance, and the smaller the imports for re-exportation.

The imports before payment of duties, under the same regulations now applied to our imports in transit to Canada, may be taken from warehouse to warehouse—from the East to the lakes, and to Pittsburg, Cincinnati, and Louisville—from New Orleans to Natchez, Vicksburg, Memphis, and St. Louis—and warehoused in these and other interior ports, the duties remaining unpaid until the goods are taken out of the warehouse and out of the original package at such ports for consumption; thus carrying our foreign commerce into the interior with all the advantage of augmented business and cheaper supplies throughout the country.

It will introduce into our large ports on or near the seaboard assorted cargoes of goods, to be re-exported with our own, to supply the markets of the world. It will cheapen prices to the consumer, by deducting the interest and profit that are now charged upon the advance of duty—building up the marts of our own commerce, and giving profitable employment to our own commercial marine. It will greatly increase our revenue by augmenting our imports, together, with our exports; and is respectfully recommended to Congress as an important part of the whole system now proposed for their consideration.

The act of the 3rd of March last, allowing a drawback on foreign imports exported from certain ports to Canada, and also to Santa Fé and Chihuahua, in Mexico, has gone to some extent into effect under regulations prescribed by the department, and is beginning to produce the most happy results—especially in an augmented trade in the supply of foreign exports to Canada from our own ports. Indeed, this law must soon give to us the whole of this valuable trade during the long period when the St. Lawrence is closed by ice, and a large proportion of it at all seasons. The result would be still more beneficial if Canada were allowed to carry all her exports to foreign nations in transitu through our own railroads, rivers, and canals, to be shipped from our own ports. Such a system, whilst it would secure to us this valuable trade, would greatly enlarge the business on our rivers, lakes, railroads, and canals, as well as augment our commerce; and would soon lead to the purchase, by Canada, not only of our foreign exports, but also, in many cases, of our American products and fabrics, to complete an assortment. In this manner our commercial relations with Canada would become more intimate, and more and more of her trade, every year, would be secured to our people.

PUBLIC LANDS.—The net proceeds of these sales paid into the treasury during the last fiscal year was 2,077,022 dollars 30 cents; and from the first sales in 1787 up to the 30th of September last was 118,607,335 dollars 91 cents. The average annual sales have been much less than two millions of acres, yet the aggregate net proceeds of the sales in 1834, 1835, 1836, and 1837, was 51,258,667 dollars 82 cents. Those large sales were almost exclusively for speculation; and this can only be obviated, at all times, by confining the sales to settlers and cultivators in limited quantities, sufficient for farms or plantations. The price at which the public lands should be sold is an important question to the whole country, but especially to the people of the new states, living mostly remote from the seaboard, and who have scarcely felt the presence of the government in local expenditures, but chiefly in the exhaustion of their means for purchases of public lands and for customs. The public lands are not of the same value; yet they are all fixed at one unvarying price, which is far above the value of a large portion of these lands. The quantity now subject to

entry at the minimum price of 1 dollar 25 cents per acre is 133,307,457 acres, and 109,035,345 acres in addition, to which the Indian title has been extinguished—being an aggregate of 242,342,802 acres, and requiring a century and a quarter to complete the sales at the rate they have progressed heretofore—without including any of the unsold lands of Texas or Oregon, or of the vast region besides to which the Indian title is not yet extinguished.

SEC. TREASURY.—The only proper course for the government is to keep its own money separate from all banks and bankers, in its own treasury—whether in the mint, branch mints, or other government agencies—and to use only gold and silver coin in all receipts and disbursements. The business of the country will be more safe when an adequate supply of specie is kept within our limits, and its circulation encouraged by all the means within the power of this government. If this government, and the states, and the people, unite in suppressing the use of specie, an adequate supply, for want of a demand, cannot be kept within our limits; and the condition of the business and currency of the country will be perilous and uncertain. It will be completely within the power of the banks, whose paper will constitute the exclusive circulation of the whole community. Nor will it be useful to establish a constitutional treasury, if it is to receive or disburse the paper of banks. Separation from the banks in that case would be only nominal, and no addition would be made to the circulation of gold and silver.

The constitutional treasury could be rendered a most powerful auxiliary of the mint in augmenting the specie circulation. The amount of public money which can be placed in the mint is now limited by law to one million of dollars; and to that extent it is now used as a depository, and as a means of increasing our coinage. It is suggested that this limitation may be so modified as to permit the use of our mint and branch mints for a much larger sum in connexion with the constitutional treasury. The amount of public money received at New York greatly exceeds that collected at all other points, and would of itself seem to call for a place of public deposit there; in view of which, the location of a branch of the mint of the United States at that city would be most convenient and useful. The argument used against a constitutional treasury, of the alleged insecurity of the public funds in the hands of individuals, and especially the vast amount collected at New York, will be entirely obviated by such an establishment. The mint of the United States has now been in existence 32 years. It has had the custody of upwards of 114,000,000 of dollars; and during this long period of time there never has been a loss of any of its specie in the mint by the government. The mint at Philadelphia is now conducted with great efficiency, by the able and faithful officer at the head of that establishment, whose general supervisory authority, without leaving the parent mint, might still be wisely extended to the branch at New York. Besides the utility of such a branch as a place for keeping safely and disbursing the public money, it is believed that the coinage might be greatly augmented by the existence of a branch of the mint at that great city. It is there that two-thirds of the revenue is annually collected—the whole of which, under the operation of the constitutional treasury, would be received in specie. Of that amount a very large sum would be received in coin of other countries, and especially in foreign gold coins—all of which could be speedily converted, upon the spot, into our own coins of gold and silver. The amount also of such foreign coin brought by emigrants to the city of New York is very considerable—a large portion of which would find its way to the branch of the mint for recoinage.

A considerable amount of foreign gold coin has, during the present year, under the directions of this department, been converted into American gold coin; but the process would be much more rapid if aided by the organisation of the constitutional treasury, and the establishment of a branch of the mint at the great commercial emporium of the union. With the mint and branch mints as depositories, the sum remaining in the hands of other receivers of public money, whether of lands or customs, would be inconsiderable, and the government could be readily protected from all losses of such sums by adequate bonds, and the power, by law, to convict and punish as criminals all who embezzle the public moneys.

The foregoing tables and statements complete our historical statistics of the currency and finances of the United States.

Under circumstances of great national difficulties, which involved the civil and religious liberties of the citizens, and the independence of the republic, we believe the people of the United States would consent to be taxed for that purpose even as highly as the people of England have patiently consented to be taxed; but we cannot, at the expense of truth, flatter America, by saying that her citizens would consent long to pay taxes,—direct taxes they would require to be for carrying on a war with any European power, on account of a dispute, or for a cause which did not involve the independence of America,—the liberties of her citizens,—and the domestic happiness of their families, and of their dwellings.

CHAPTER XXXIX.

TAXATION AND DEBTS OF THE SEVERAL STATES.

WE have in the separate account of each state given, with few exceptions, their revenues and expenditures. In regard to taxations, the system of one state generally differs from that of another. In SOUTH CAROLINA, not a warlike, but an honourable state, which has with fidelity maintained its credit, direct and indirect, income taxes are levied.* In MAINE, the revenue is derived from a state and a bank tax, commission duty, and lands. In NEW HAMPSHIRE, which has no debt, by a tax on real property, by a poll tax and a small bank tax.

In MASSACHUSETTS the ordinary receipts (exclusive of coin borrowed) amounting to about 420,000 dollars, consists chiefly of a bank tax, producing about 330,000 dollars of revenue, and an auction duty yielding about 55,000 dollars.—(See *Finances of Massachusetts*.) In RHODE ISLAND, which has no public debt, the revenue is derived from a tax on banks, pedlars, lottery grants, sales of lottery tickets, spirit licences, auction duties, bank bonuses, civil commissions,

* The rates per cent, &c., of taxes in South Carolina are increased or diminished in accordance with the expenditure. The taxes for 1842 were as follows, viz.:

" Lots and buildings; also glebe leasehold.....15 cents per cent.
On the amount of sales of all goods, wares, or merchandise, sold within the limits of the city of Charleston, by any person or persons whomsoever, and whether for cash or credit, between the 1st of April last and the 1st of day April of the present year, on the amount of such sales respectively—rice and cotton sold by wholesale, by any factor, or goods, wares, and merchandise, sold at public vendue, excepted
20 cents on every 100 dollars.

Stock in trade of transient persons1 per cent.

All profit or income arising from the pursuit of any trade, faculty, profession, occupation, or employment whether in the profession of the law, the profits to be derived from the costs of suit, counsel fees, or other professional income; and on the amount of commissions received by vendue masters, or other persons vending goods, wares, and merchandise, or real or personal property on commissions: (Judges and other officers exempt from taxation, by the state; clergymen, mechanics, schoolmasters, and other teachers employed in the education of youth and minors, or the salaries of banks or other clerks where they do not amount to, or exceed, 800 dollars excepted) 50 cents per cent.

Buying or selling bills of exchange; also notes, &c.....60 cents per cent.

Profit and income of persons carrying on business within the city, but residing beyond the limits thereof.....50 cents per cent.

Slaves over twelve years of age2 dollars 50 cents each.

Slaves per head under twelve years of age.....1 dollar 50 cents each.

Slaves working out, or employed in the city, whose owners reside without the city
7 dollars each.

Slaves, on gross amount of sales at private sales.....371 cents on every 100 dollars.

Every coach, or other four-wheel carriage, used within the city, usually drawn by two horses, exclusive of the horses25 dollars each.

Four-wheel carriages, usually drawn by one horse, exclusive of the horse 15 dollars each.

Every two wheel chaise, chair, sulky, or other carriage.....10 dollars each.

Every horse or mule, except such as are used in licensed carts and drays, whose owners reside in the city, i. e. two horses or mules for each licensed double cart, and one horse or mule for every licensed cart or dray.....5 dollars each.

Horses and mules on the gross amount of sales, at private sale 1 per cent every 100 dollars.

Lots without wells or cisterns.....40 dollars each.

Every dog kept in any lot.....3 dollars each.

Break waggons.....25 dollars each.

Omnibuses, hacks, &c.....25 dollars each.

"The taxes generally are the same as last year, with the exception of real estate, last year 40 cents. Salaries last year were liable when they amounted to 1500 dollars; this year, 800 dollars pays. Break waggons last year, fifty dollars; this year, twenty-five dollars."—*Chilveston Courier*.

and dividends on bank stocks. CONNECTICUT has no debt, and the revenue is levied by one cent in the dollar, on a rate called the grand list, dividends on bank stock belonging to the state, auction duties, &c.

NEW YORK, NEW JERSEY, PENNSYLVANIA, and MARYLAND. For full details of the taxes and expenditure, &c., see separate descriptions of these states.

In VIRGINIA the revenue is derived from a poll tax on slaves, assessed taxes on horses, private carriages, four and two-wheeled stage coaches, private sledges or carryalls, clocks and watches, pianos and plate, licences to merchants, insurance offices, lawyers, doctors, keepers of houses of private entertainment, to exhibitors of shows, vendors of lottery tickets, and to owners of stud horses. A most inquisitorial system of taxation, no doubt; but to which Virginia has honourably submitted, in order to maintain un tarnished the invariably high character and the credit of the state.

NORTH CAROLINA has no state debt, and the revenue to meet the annual expenditure is raised within the year chiefly by a direct tax.

In GEORGIA:	dollars.	cts.
Total amount received by the state in 1843	324,905	29
Total amount expended	267,764	11

PRINCIPAL ITEMS OF EXPENDITURE.		CHIEF SOURCES OF INCOME.	
	dollars.		dols. cts.
Salaries of various officers	72,000	Direct taxes	220,115 14
Miscellaneous expenses of executives	1,000	Bank tax	24,795 11
Salaries of the judiciary	20,200	Balance from 1842	39,374 00
Pay of the legislature	93,318	Miscellaneous	81,378 00
Interest on state debt	93,000		

	dollars.
Whole amount of state debt	1,600,000
Annual interest on this debt	95,000

ALABAMA, MISSISSIPPI, LOUISIANA, TENNESSEE, KENTUCKY, MISSOURI, ILLINOIS, OHIO, and MICHIGAN, see separate accounts of each of these states for details of taxation, debts, &c.

INDIANA, lands are taxed, and there is also a poll tax.

ARKANSAS levies a small state coloured tax and a poll tax.

STATE DEBTS IN 1838-9.

In May, 1838, after the passage of the general banking law of New York, authorising the comptroller to issue circulating bank notes, on a pledge of the evidences of public debt of the several states, Mr. Flagg sent a circular to the financial officer of each state, soliciting information in regard to the amount of stock created, the rate of interest and when payable, the mode of transferring the stock, whether specific funds were pledged for the payment of interest, and whether the interest in all cases was paid by the state. Full answers were received to these inquiries except in two or three cases.

The following tables, founded on those returns, show the total amount of stock issued, and authorised to be issued, by each of the eighteen states which have resorted to this mode of raising money. Where the returns from the financial officer did not afford all the information which was desired, the state laws have been examined to ascertain the extent of the authorised loans. The operations of many of the states have been so extensive and varied, that it is not an easy matter to get at the precise amount of stock issued and authorised to be issued. It is probable however, that the aggregate amount of stock authorised by all the states is even greater than the amount stated in the tables.

STATEMENT of the Amount of Stocks and Bonds issued and authorised to be issued by the several States named below: giving the Year in which each State commenced issuing Stock, the Object for which issued, and the Rate of Interest.

STATES.	Year in which issue of Stock commenced.	For what Object issued.	Amount for each Object.		TOTAL.		Rate per cent.

United States Government	12,076,188	12,076,188	30,381,700	32,958,827

In the account which we have given of the finances of Pennsylvania, we inadvertently with due severity on the delinquency of that state. At the same time we predicted that the debts of Pennsylvania would be paid; and, from the authorities of the state, itself, we proved the ability to pay, and the disgrace of having, even for a day, suspended the fulfilment of its obligations.

As we have before stated, and as Mr. Lee shows, there has been no want of ability to pay; and a change of circumstances and force of public opinion, and, we hope, the honesty of a great majority, has at length brought the means of Pennsylvania so far into fiscal operation, that the interest of the debt was paid in February, 1845.

Great injustice has been done to the *whole people* of the United States, by extending to them the ignominy of a minority of the states: which have dishonoured their credit; and, even in the repudiating and non-paying states, the circumstances, related in the extracts, which we have made, go far to exonerate, a great portion of the inhabitants.

The justice of an existing generation, binding itself, or those who succeed it, to fulfil its obligations, may be practically illustrated by supposing that an individual is possessed of an estate,—the management, and the improvement, of which cost, without extravagance, a greater sum than the *estate* yields; but which management, and outlay, is necessary to render the estate of greater value: then, undoubtedly, whoever possesses, or succeeds to, and considers it his interest to hold, such estate, becomes legally and justly bound to pay the fines, or interest, for which such estate may have been mortgaged; or, if the estate become so productive, as to yield surplus rents, after paying the ordinary expenses of management, improvement, and cultivation; and after paying the interest, or the amount that the estate is mortgaged for,—then such surplus should be applied judiciously, to reduce or pay off the incumbrance, or mortgage.

Should the same estate, or an estate without any incumbrance, have a powerful, and unjust neighbour, and such neighbour attempt to trespass, or injure the estate, and disturb its possessor, family, and servants; and, that the said possessor is, in consequence, subjected to extraordinary expense, in order to preserve his estate, and repel the aggressor,—then, also, he who succeeds to, or accepts of, the estate, succeeds to, and accepts, its liabilities.

Further, if the possessor has had the privilege of carrying the produce of the said estate, by certain roads, to certain markets, and bringing back for his use, and that of his family and servants, and for the benefit of the said estate, certain commodities; and should he, or his family or servants, be prevented carrying the said produce, and commodities, by the said road, to and from the said markets, then it becomes a question of expediency, how far he can, for the purpose of preserving his privileges undisturbed, expend for the benefit of the estate, its revenues and if, further necessary, to borrow money, for the use and payment of which the

estate, and he who succeeds to it, become, in such case, undoubtedly, and justly, responsible.

Should, however, the possessor of the said estate, in his prosperity (for we presume he would not in his adversity, or when his, or rather the, estate was grievously mortgaged), without himself, or his family or servants, or his highways, or his markets, being attacked, interfere in the affairs of his formidable neighbour, and, in waging war with him, exhaust his own resources, and then pledge his estate for money, to ruin or annoy his said neighbour ; it then becomes questionable how far the estate can afterwards bear, or disengage, itself of the burden imposed upon it by the folly, profligacy, and injustice of its owner, or rather its mis-manager.

Such are the conditions upon which every state in North and South America, and every nation in the world, that has borrowed capital, have placed themselves in regard to those who lent them money. The obligation holds true with equal force and justice, whether, the money has been, discreetly, or recklessly borrowed, or whether necessity, wisdom, or even profligacy, may have prevailed in its borrowing, or in its expenditure.

CHAPTER XL.

TEXAS.

THIS extensive region, which once formed part of the Spanish vice-royalty of Mexico, and afterwards of the Mexican republic, acquired independence of the latter, and was acknowledged as a sovereign power, by the United States of America, by England, France, Holland, and some other of the European nations.

During the year 1845 the local government, and legislature, of Texas have consented to annexation with the great American confederation. Henceforward the foreign navigation trade, and customs regulations, and tariff, will be consequently amalgamated with those of the United States.

The probable future prospect of this magnificent region, and the effects, which the rapid influx of the enterprising Anglo-Saxon race over its territories may have on the power, policy, and civil and religious liberties of the neighbouring states of Mexico, and of central, and, even, of South America, are subjects upon which statesmen, legislators, and philosophers may contemplate as replete with the elements of good, and of evil,—of grandeur and of power: the progress,

of which, cannot be always free from outrage, and domestic suffering, however certain, and great, must be the ultimate attainment, and security, of civil and religious liberty,—of just laws, and wise administration.

The area of Texas, not yet well defined, is, however, more than sufficiently extensive to form a separate and independent state.

Mr. Kennedy's account of Texas describes the different sections of the country in detail, and forms the most comprehensive work on this state. Several reports, and short descriptions, of Texas, have, also, been published in the United States.

The boundaries on the south-western or Mexican frontier have not been adjusted ; but the government of the United States will no doubt insist on extending this boundary to Rio Grande, or Bravo del Norte ; while, the Red River and a line, due north from the latter separate it from the state of Arkansas ; and the river Arkansas, on the north, divides it from the western territory. The river Sabine, the limit of Louisiana, bounds Texas on the east. The extent of its maritime frontier may be variously measured. Following the courses of its lagoons, this distance is greatly extended. From point to point, along the outside, of the long sandy islands, which line the coast, and within which are the lagoons, the distance from the Sabine to the Rio Grande del Norte, has been estimated. we would say rather than measured, at about 500 English statute miles.

The area of Texas has, also, been estimated at from 310,000, to 330,000 English square miles, or much more than twice the area of the United Kingdom ; and according to all accounts, no country on earth has less of its surface unfit for cultivation.

Its whole *sea coast region*, varying in breadth from 30, to 100 miles, is composed of a fertile alluvium, in which there is not, or at least rarely, a stone that would intercept the plough ; and, unlike many parts of Virginia, Georgia, Florida, Alabama, and Louisiana, there are but few, and these not extensive, swamps. This region is extolled for its great capability of producing, that finest quality, Sea Island cotton. Besides which it will yield the most delicious fruits : such as peaches, olives, melons, figs, oranges, lemons, pine-apples, dates, &c., also the sugar cane, maize, and other grain. This region is well watered by numerous rivers, and streams. The greater part consists of extensive meadows, with magnificent belts of wood, along the margin of the rivers.

The *second, or undulated, and high region*, slopes down from the hills and mountains to the sea coast region, crossing the territory, and is in breadth from 120, to 180 miles. It is described as consisting chiefly of a rich, fertile, soil, covering substrata of either limestone, or sandstone, and presenting alternately woodlands, and rich grassy districts.

The *third, or mountainous region*, stretches upwards to the west, north-west,

and from which all the rivers flow down, to the east, and south-east, into the Mexican gulf, or into the Mississippi, and its branches. Elevated table-lands spread over north-western points. None of the mountain slopes are described as too steep for agriculture; and, except in the prairies of this region, oak pine, and other magnificent and valuable timber trees abound.

If we can depend upon descriptions, Texas is naturally, with less exceptions than any other country, capable of producing all kinds of crops and fruits:—more so than France, which has all the climates for grain:—from oats and barley, to wheat, rice, and maize,—for fruits, from the apple to the orange; for wine, the olive, the mulberry, &c. Texas has the climate, and the soil, for the sugar-cane, the olive, the cotton plant, the mulberry, the melon, fig, and apple; and its pasturage has always been renowned.

The RIVERS of Texas are numerous, and for a great extent navigable; but large vessels cannot ascend them from the sea. The great natural disadvantage of Texas, in common with the whole eastern sea coast of Mexico, is the want of good harbours. Humboldt observes, “The intendency of San Luis comprehends more than 230 leagues of sea coast, but without commerce and without activity. That part which extends from the Rio Grande del Norte, to the river Sabine is almost still unknown, and has never been examined by navigators.”

This coast would have probably still continued to be “unknown and without commerce and activity,” had it remained under the intendency of San Luis, or under the non-enterprising Spanish-Mexicans; and if it had never been entered, or traversed, by the Anglo-Saxon race, who were invited into Texas by the Emperor Iturbide: not to establish its independence, but to defend it from Spain. The Anglo-Saxons were invited into Texas, under nearly like circumstances as Hengist and Horsa were invited into Britain, and the result has been similar.

The rivers SABINE and NECHES fall into the Sabine lagoon. The Sabine was obstructed by a raft, and deemed impassable; but it was removed by the government of the United States, and the river was then (1837) navigated by a steamboat 125 feet long, drawing six feet water. Since 1839 one or more steamboats navigate this river, from its mouth to the upper settlements. The Sabine, like most of the Texan rivers, periodically overflows its banks, and fertilises the soil. It has several small tributaries.

The NECHES, which is navigable for small steamboats for about 100 miles, flows also into the Sabine lagoon; the passage over the muddy bar, at the entrance into this lagoon from the gulf, only admits small vessels.

The next inlet is GALVESTON, which spreads into two large bays, or lagoons, and the eastern entrance will admit vessels drawing about twelve and a half feet water. TRINIDAD river falling into it may, it is said, be ascended, by steam-

boats, for from three to four hundred miles from its mouth. It is rapid, and from eight to ten feet deep. At the western extremity of Galveston Island is SAN LUIS harbour. The passage, over its bar, is stated to be somewhat deeper than that of Galveston. A few leagues west, of San Luis, the BRAZOS DE DIOS flows across a shifting sand-bar, over which there is only six to eleven feet depth of water.

Mr. Kennedy says, the Brazos is exceedingly well adapted for steam navigation. Opposite Velasco (at its mouth) its width is about 170 yards, and for 500 miles it varies from 150 to 200 yards." After heavy rains it swells into a torrent. In ordinary seasons its banks, twenty to forty feet high, are overflowed. Like the Red river, its waters are coloured red, with earthy particles, carried down from the uplands. It is navigated by several steam vessels, and has numerous tributaries. The first colonists from the United States made *San Felipe*, 150 miles up this river, their head-quarters.

MATAGORDA BAY is a lagoon, sixty miles long, and from six to ten miles broad: the entrance, *Paso Cavallo*, from the gulf, has only from eight to nine feet water on its bar: within it is safe and deep.

The COLORADA, or TEXAS, falls into this inlet by two branches. It has steep banks, which are seldom overflowed. Its navigation is interrupted by a raft; but if not already, it will, no doubt, soon be removed by the government. The river will then be found navigable, for steamers, more than 200 miles. Many of its tributaries are navigable. Several rivers fall into La Baca Bay, a branch of Matagorda. The *La Baca*, and *Novida*, are navigable, about thirty miles for steamers.

The large inlet, forming the bays of ESPIRITU SANTO, ARANSAS, and COMPANO, are separated from the gulf, by two long islands, Matagorda, and St. Joseph. The *Aransas* passage from the gulf is not more than seven to eight feet deep over the bar. The bay is also shallow, and the river *Guadalupe*, and the *Nuences*, and other streams, which fall into these bays, are described as not deep, but capable of being rendered advantageous, for bringing down the produce of the upper countries to the sea, in vessels requiring only a light draft of water.

CORPUS CHRISTI and the LAGUNA DEL MADRE, form an inlet, about 100 miles long, within three long islands, separated by narrow passages. The bay of Corpus Christi extends, inland, about forty miles, north and south. The *Rio de las Mucas*, which falls into this bay, is a long, rapid river, navigable for small boats for about forty miles.

The LAGUNA DEL MADRE, though so long, and from five to six miles in breadth, is shallow, and the water in many places is not more than from eight, to eighteen, inches deep. The *Barra del Santiago*, or the outer inlet from the gulf into the lagoon, has from six to seven feet water over the bar, and small vessels with merchandise frequently enter, and discharge.

The mouth of the RIO GRAND DEL NORTE, is separated by a narrow neck of land from the *Barra del Santiago* by a narrow isthmus. The entrance to this large river, from the gulf, has no greater depth of water than from three to five feet over its shifting bar. For 200 miles upwards, its current is described as smooth and deep, to Laredo, where rapids commence.

The CLIMATE OF TEXAS is described as mild and salubrious. Not subject to yellow fever, or pulmonary consumption. The *Mineralogy* of the country we believe to be only imperfectly known. Bituminous coal is said to be abundant in the interior. Gold and silver are also asserted to abound in the hilly and mountainous country; and specimens of both have been produced. Iron ore is said to be plentifully distributed; and copper, lead, and alum are asserted to have been discovered in considerable quantities. Excellent building stone is abundant in all parts except the sea coast region. There are large salt lakes and salt springs; and as, it is by all admitted, that, the soil, and climate, of Texas, are not surpassed in any country, as there is sufficient timber and minerals,—the want of deep harbours appears to be the only great natural disadvantage of this extensive region of America: which has, until the last few years, remained more wild, and uncivilized than it could have been when Mexico was conquered by Cortez.

HISTORICAL ABSTRACT.*

On the 17th of January, 1821, Moses Austin, a native of New England, obtained permission, from the supreme government of the eastern, internal, provinces of Mexico, to introduce three hundred families, as colonists, from Louisiana, into Texas.

In consequence of Moses Austin's death, his project of colonisation was taken up, and prosecuted, by his son Stephen, who was obliged, in 1822, to apply to the authorities of revolutionized Mexico, for confirmation of the privilege, which had been conceded to his father, by the authorities of old Spain. On the 4th of January, 1823, a colonization law, approved by the Mexican emperor Iturbide, was promulgated; and on the 18th of February of the same year, an imperial decree was issued, empowering Austin to found a colony, under the provisions of the general law.

A revolutionary movement having displaced Iturbide; and, the government which succeeded him having decreed the nullity of all imperial titles, Austin was constrained to solicit the confirmation of his concession from the congress of Mexico. This he obtained on the 14th of April, 1823, which may, therefore, be recorded as the legal date of the commencement of Anglo-American colonization in Texas.

* Chiefly from a compilation by Mr. Kennedy.

To encourage the settlement of her waste frontier lands, and thereby interpose a barrier against Indian aggression, and strengthen herself against Spanish attempts at reconquest, Mexico held out various inducements to the earlier colonists of Texas: and, among them, a temporary exemption from taxes and tithes.

By article 24 of the Mexican colonization law of the 4th of January, 1823, it was enacted, that, during six years from the date of the concession, the colonists should not pay tithes, or duties, on their produce, nor any contribution whatever of a public kind.

By article 25, of the same law, it was enacted, that during the six years immediately succeeding the termination of the first specific period the colonists should pay half the tithes and half the contributions, direct and indirect, that were paid by native citizens.

These enactments emanated from *the general government of Mexico*.

The united state of Coaguila and Texas, as a member of the Mexican Federation, by article thirty-two, of a colonisation law, passed by its legislature on the 24th of March, 1825, ordained that during the first ten years—reckoning from the commencement of the settlement—colonists, within the limits, of the state should be free from any kind of public contribution, except such as were generally demanded to prevent, or repel, invasion. After ten years, new settlers were to bear an equal proportion of the public burdens with native citizens.

The law containing these provisions was repealed by an act, dated the 28th of April, 1832, which exempted “all new towns” for ten years, from the time of their foundation, from every description of tax, except contributions for defence against foreign invasion. For the site of each of these “new towns,” the state appropriated four square leagues of land.

The establishment of custom-houses in Texas, and of garrisoned posts, to enforce the collection of the national revenue, which followed the periods of exemption from taxation granted to the infant settlements, formed, with the colonists, prominent causes of dissatisfaction; while, on the other hand, the infraction of its fiscal enactments, was regarded by the government of Mexico as ungrateful, and rebellious, on the part of men invited, by its liberality, to occupy its fertile lands. The colonists were refractory. In June, 1832, a party of them attacked and captured, the Mexican garrison, at the port of Velasco—in April, 1833, petitions complaining of the tariff, and praying for the privilege of free importation, for a term of three years, of the most important articles of consumption, were transmitted by the colonists to the general government. In the autumn of 1834, a number of persons seized the collector of customs, at Anahuac, and expelled the military stationed at that post—and, in the autumn of 1835, the Anglo-Americans in Texas and Mexico were in a state of declared war.

In November, 1835, an Anglo-American convention was held in Texas, and

a provisional government proclaimed, which conferred on a governor and council the power "to impose and regulate impost and tonnage duties, and to provide for their collection under such regulations as might be deemed expedient."

An ordinance of this provisional government, imposing certain duties of customs, passed on the 12th of December, 1835, was repealed by another ordinance on the 27th of the same month, which placed a duty of twenty-five per cent, *ad valorem*, on such goods, wares, and merchandise, as were "entitled to a debenture" in the port of shipment, and a duty of fifteen per cent, *ad valorem*, on such as were not entitled to debenture. Articles imported, *bona fide*, for the use of emigrants, including farming implements, household furniture, provisions, stores and machinery of all kinds, were to be admitted free.

The declaration and establishment of the independence of Texas, and the adoption of a constitution, by its inhabitants, were followed by the convocation of a Congress, which, on the 20th of December, 1836, passed an act "to raise a revenue by impost duties," under which the following charges were exigible:

On the invoice value of wines, spirituous and malt liquors, 45 per cent, *ad valorem*; silk goods, and all manufactures of silk, 50 per cent, *ad valorem*; sugar and coffee, 2½ per cent, *ad valorem*; teas, 25 per cent, *ad valorem*; bread stuffs, 1 per cent, *ad valorem*; iron and castings, 10 per cent, *ad valorem*; coarse clothing, shirtings, shoes, blankets, kerseys, satinets, and stuffs formed of a mixture of cotton and wool, 10 per cent, *ad valorem*. All other non-enumerated goods an *ad valorem* duty of 25 per cent on invoice price.

Another and more comprehensive customs law was passed on the 12th of June, 1837, "for the purpose of raising a revenue to aid in defraying the public expenses, sustaining the public credit, and securing to the public creditors a fair annual, or semi-annual, interest on the shares of stock in the funded debt."

The tariff underwent a farther revision by an act passed on the 5th of February, 1840.—(*See the late tariff of Texas, subjoined to the tariff of the United States.*)

It is to be observed that the receipt of duties, in national paper, profusely issued, on an unsound basis—and, of course, rapidly depreciated—has, from time to time, caused the tariff to appear much higher than it really was; and the successive endeavours, to realise, amidst the confusion occasioned by a spurious currency, an adequate tangible revenue, has imparted a capricious character to the fiscal legislation of the republic, discouraging and injurious to the merchant and the emigrant. The duties, at present, are receivable only in gold and silver, *at their market value*.

More than two-thirds of the revenue from customs have been received at the port of Galveston. The eastern counties of Texas, which possess a comparatively dense population, contribute but a small proportion to the public funds, owing to their geographical position, which secures every facility to the smuggler.

The gross amount received at the port of Galveston, for the year ending the 31st of December, 1842, was, in round numbers, about 110,000 dollars; the receipts for the same period at Brazos, Matagorda, Red River, San Augustine, and Sabine, at 30,000 dollars. The average expense of collection was a fraction above fourteen per cent.

All attempts hitherto made to raise a revenue by *direct taxation* have been unsuccessful.

The laws for regulating the general trade of Texas, as well as the coasting trade, and the tariff, are now the same as those of the United States. Certain local regulations are continued in force, until changed under the state constitution and legislature of the state of Texas.

The following laws may be considered as remaining in force :

HOSPITAL AT GALVESTON.—By an act approved by the president on the 3rd of February, 1845, for the establishment of a hospital at Galveston, it is provided that, from and after the 1st of May next ensuing, "the commander of every vessel arriving at the port of Galveston shall be required to pay to the collector of customs at that port the sum of 50 cents for every foreign white male cabin passenger over sixteen years of age, and twenty-five cents for every white male steerage passenger over sixteen years of age, according to the list of passengers produced by the said commander, or his clerk, which list shall be sworn to."

CHAMBER OF COMMERCE AT GALVESTON.—By an act approved by the president, 3rd of February, 1845, a corporate body was created under the style and title of "The Galveston Chamber of Commerce," an institution which, according to the preamble of the act, "is much required by the mercantile community, as tending to diminish litigation and to establish uniform and equitable charges."

It is provided that the act of incorporation shall "be in force for and during the space of twenty years from the passage thereof, and take effect from and after its passage."

LAW PROCEEDINGS.—An Act supplementary to "an Act to regulate Proceedings in Civil Suits." This act provides that, from and after the 27th of June, 1845, "in all suits brought to recover the price or value of any goods, wares, or merchandise imported, or notes given for the same, the fact that such goods, wares, or merchandise, were imported or introduced into the republic without payment of the lawful duties, or in violation of any revenue law thereof, may be pleaded in defence, and if established, shall constitute a legal and valid defence in all such cases." It is further provided that, "In cases where such defence shall be pleaded"—and also in cases—"when any civil action shall hereafter be brought to recover duties not paid, the party so charged, or unpleaded, shall not be liable to any criminal prosecution for the same offence on non-payment."

WRECK-MASTERS.—An Act “to amend an Act passed the 8th of January, 1841, respecting wreck-masters,” approved by the president February 3rd, 1844, provides—

“That from and after its passage, the wreck-masters of the republic shall be appointed by the president of the republic, and controlled by the collectors of customs of the several maritime districts, who shall each appoint for his district at least one, and not more than three wreck-masters; and it shall be the duty of each of these person so appointed to attend, in the manner set forth in the act to which this is an amendment—to the saving and disposing of all property wrecked in his district, or in the part of it allotted to him, if such property be declared to be abandoned by its owner, or the agent, or factor for the same; or be found abandoned, no such person appearing.

“That it shall not be lawful for the wreck-master to recover out of the proceeds of any wrecked property sold by him as wreck-master, an auctioneer’s commission, or any other in addition to that allowed in the act aforesaid; but he shall be allowed to charge for the services and mileage of a crier, at a rate which shall be fixed by the collector of the district.

“That, in order to award the rate or amount of salvage, on property wrecked, one arbitrator shall be appointed by the wreck-master, on behalf of the salvors, and one by the owner of the property salvaged, or the agent, or factor, for the same, or, default of those, by the chief justice of the county in which the wreck happens.—And the wreck-masters, before appointing an arbitrator, shall notify the salvors of such intent, and if a majority of the whole number of salvors shall request him to appoint any individual named and agreed on by them, as arbitrators, for the salvors, the said wreck-master shall so appoint such individual, and in case of the arbitrators not agreeing, they shall choose an umpire, who shall decide between them—his awardment not being higher than the rates, or amounts awarded by the two arbitrators;—and, from the decision of the arbitration, an appeal to the Court of Admiralty may be taken by either of the parties, or by any portion of either, if the amount in question be such as by law would entitle the party to appeal from a magistrate to a district court;* but, in such case, the party appealing must notify the opposite party of such intention, within two days after the awardment appealed from is made known—otherwise the right to appeal shall be forfeited; and where an appeal is taken it shall not impede the sale of the property wrecked.

“Finally—That it shall be the duty of all wreck-masters, in whose district any wreck may occur, to publish, or cause to be published, either in some public journal in said district, or by affixing to the doors of at least three several public

* By an act of Congress, passed January 19th, 1841, an appeal may be had from the decision of a magistrate to the district court, where the sum in controversy shall exceed twenty dollars.

places in said district, a written or printed notice, with a description of property offered at said wreck-master's sale, at least ten days previous to the aforesaid sale.

"This act to take effect from and after its passage."

Gross Return of British and Foreign Trade within the Consulate of Galveston, during the Year ending December 31, 1844.

REMARKS. Three of the vessels classed by the custom-house under the head of "Bremen," were Hanoverian; chartered at Emden, for Bremen use. The demand for cotton exceeding the supply, some European vessels were obliged to leave Galveston without cargo. The vessels classed "Belgian," and four of the vessels classed "Bremen," conveyed emigrants to Texas. The British ships brought no emigrants.

No account of the crews of ships entering the port of Galveston is kept by the local authorities; the return, therefore, is, in this particular, incomplete.

* Average rate of exchange, 108.

The following is a statement relative to its previous debt, revenue, and trade, compiled by Mr. J. P. Kettel; also from official returns.

Public Debt of Texas.

D E B T.	Term.	Amount.	Amount.	Amount.
		dollars.	dollars.	dollars.
Funded act of 1837.....	1841	2,400,000	345,000	1,645,000
" " 1840.....	5 years	2,400,000	240,000	1,940,000
Bonds pledged.....	20 "	500,000	170,000	670,000
Issued for navy.....	1842	620,000	302,000	502,000
Bonds at 8 per cent.....	5 years.	100,000	32,000	132,000
Treasury notes.....		2,250,000		2,250,000
Land receipts.....		1,500,000		1,500,000
Floating debt.....		500,000		500,000
Total debt.....		7,050,000	1,079,000	5,169,000

According to a congressional report of 1839, the quantity of government land was as follows:

L A N D.	Acres.	Acres.
	number.	number.
Extent of the Texian republic.....		263,420,000
Granted by Mexico, and confirmed by Texas.....	53,311,267	
Texas grants, since her independence.....	5,597,356	
Military bounty lands.....	4,263,074	
Land scrip issues.....	1,500,000	
		64,671,797
Unappropriated balance.....		138,614,203

The imports and exports of the United States, to and from Texas, have been as follow :—

IMPORTS and Exports to and from Texas.

Y E A R S.	Exports to Texas.		Total.	Imports.
	Domestic Goods.	Foreign Goods.		
	dollars.	dollars.	dollars.	dollars.
1837.....	797,312	210,610	1,007,922	163,381
1838.....	1,028,818	210,002	1,238,820	165,718
1839.....	2,379,616	308,017	2,687,633	318,116
1840.....	937,073	281,009	1,218,082	306,847
1841.....	516,255	772,041	1,288,296	293,026
1842.....	278,978	127,951	406,929	180,892
1843.....	705,140	37,713	742,853	143,799

The largest exports to Texas were in 1839, and consisted mostly of clothing, furniture, lumber, and dry goods, of which over 250,000 dollars was domestic cottons. A large portion of their exports consisted, undoubtedly, of the property of emigrants; but they seem now to supply themselves from other quarters, the United States having lost the trade. In the mean time, the exports of Texas, consisting of cotton almost altogether, have rapidly increased. The quantity and value brought into the United States, in each year, have been as follows :—

IMPORTS of Cotton into the United States, from Texas.

Y E A R S.	Pounds.	Value.	Y E A R S.	Pounds.	Value.
	number.	dollars.		number.	dollars.
1836.....	1,473,133	232,330	1840.....	2,065,655	223,184
1837.....	1,082,626	141,587	1841.....	3,128,776	270,315
1838.....	1,491,293	156,212	1842.....	5,255,142	46,943
1839.....	1,890,972	210,130	1843.....	7,593,107	379,750

This shows a regular and steady increase of business, apparently largely in favour of Texas. The imports and duties for the port of Galveston, for the year ending November 1, are as follows :—

IMPORTS AND DUTIES.	1842	1841	Increase.
	dollars.	dollars.	dollars.
Imports.....	365,532	510,309	144,777
Duties.....	23,042	158,815	135,773

The revenue and expenditure are as follow :—

Revenue.....	dollars.
Expenses.....	166,158
	166,269
Excess revenue.....	5,940

By the "Annual Report of the Treasury Department, to the ninth Congress of the Republic of Texas," dated "Washington, December 1, 1844," and signed "J. B. Miller, Secretary of the Treasury;" it appears that during the year ending on the 31st of July, 1844, 130 vessels entered the ports of Texas from foreign ports, or with cargoes subject to duty.

Amount of merchandise imported.....	dtrs. cts.	dtrs. cts.
Total gross amounts of revenue.....	201,113 30	686 04 03
Expenses of collection.....	23,551 15	
Net amount of revenue.....	177,561 85	

The value of the merchandise imported from the United States of America, 593,525 dollars 14 cents; Great Britain and Ireland, 51,059 dollars 89 cents; British West Indies, 3,624 dollars 10 cents; Spanish West Indies, 148 dollars 87 cents; France, 5584 dollars 58 cents; Hanse Towns, 27,494 dollars 54 cents; the Austrian Adriatic dominions, 1185 dollars 86 cents; Yucatan, 663 dollars 57 cents.—Total, 686,503 dollars 3 cents.

The rate of per centage which the gross amount of impost duties bears to the total amount of merchandise imported, is above twenty-six and a half per cent.

Official statement of revenue collected at the Custom-house, port of Galveston, for the year commencing November 1, 1843, and ending October 31, 1844 :—

ON Imports.

	dls.	cts.
Total amount subject to specific duty.....	130,847	84
ad valorem duty.....	378,325	95
Free duties.....	1,325	54

\$1,345 dollars 38 cents exchequer bills, at different rates.....	74,927	89
Amount paid in par funds.....	81,587	34
Total.....	156,615	47
Expenses of collection.....	9,455	

CHAPTER XLI.

TREATIES OF COMMERCE AND NAVIGATION BETWEEN THE UNITED STATES AND FOREIGN STATES.

The first treaty of commerce and amity, which was negotiated by the United States, was with Holland in 1778, and lead to declaration of war by England against the latter country. After the peace of 1783, treaties of peace and amity were negotiated between the United States and various foreign countries. It would be tedious and useless to enumerate all these treaties. According to a report published (April, 1840) by the Department of State of the United States, in obedience to a resolution adopted by the Senate at the last session of Congress, showing the nature and extent of the privileges and restrictions of the commercial intercourse of the United States with foreign nations, it is stated that twelve nations, viz., Austria,

Brazil, Central America, Denmark, Ecuador, Greece, the Hanseatic cities, Prussia, Russia, Sardinia, Sweden, and Venezuela, have met the propositions of America in a spirit of liberality. In the ports of all these countries American vessels, with their cargoes, whether the produce of the United States or not, are admitted on the same terms as the vessels of those countries respectively. If outward bound, they are entitled to the same drawback or bounties on goods exported, as domestic vessels are. The report then observes,

"With Great Britain, France, the Netherlands, Mexico, and Texas, our commercial relations are of a more restricted character. These nations severally confine the principle of equality to the *direct trade*. That is to say, Great Britain admits the vessels of the United States into her ports on payment of the same tonnage duties and charges as British vessels, with these conditions: First, that the vessel be built and owned in the United States, and navigated by a master and crew, three-fourths of which are citizens of the United States; and second, that the goods composing the cargo be the produce of the United States, which in practice limits the import trade to the direct intercourse between one country and the other. The trade of the United States with the British colonial possessions is regulated by treaty stipulations or by diplomatic arrangement. In all cases, however, some restrictions are observed, giving an advantage in general trade, to British bottoms. The importation from the United States of all goods but those of their own produce is mostly prohibited.

"France admits the vessels of the United States into her ports on payment of a discriminating duty of five francs, or ninety-four cents, per ton over and above that paid by French vessels. In the importation of articles, the produce of the United States, no difference is made between French and American vessels; but in reference to other articles the discriminating duty prevails in favour of French bottoms.

"In the Java trade, under the government of the Netherlands, the productions of the United States, and of other countries, are admitted at a duty of seven and four-fifths per cent ad valorem, if imported in Dutch vessels, and fifteen and three-fifths per cent ad valorem, if imported in vessels belonging to the United States.

"Chili and the Ottoman dominions admit our vessels and productions upon the footing of the most favoured nations, reserving the privilege of giving a preference to their own. Five Powers, viz., the Argentine confederation, Belgium, China, Hayti, New Grenada, Portugal Spain, the Two Sicilies, and Uruguay, are left free to deal with the commerce and the navigation of the United States as they may think proper, without any other check than our countervailing legislative provisions. With three of them, however, Belgium, Portugal, and the two Sicilies, negotiations are on foot for the conclusion of commercial treaties."

Since the publication of that report, treaties of navigation and commerce have been ratified between the United States and the following countries, viz., China, Belgium, Hanover, and Portugal.

TREATIES OF COMMERCE AND NAVIGATION BETWEEN THE UNITED KINGDOM AND THE UNITED STATES.

Treaties of peace and amity between the United Kingdom and the United States, and for the suppression of the slave trade treaty (by which the United States stipulates with England to consider that trade piracy) have at different times been concluded. The following treaties contain the stipulations agreed upon for regulating the trade and navigation between the United States and the United Kingdom and British dominions.

The treaty of commerce of the 3rd of July, 1815 has been interrupted by absurdly conceived British orders in council, and president's proclamations; but that treaty and other conventions, now in force, are those under which the trading intercourse between both countries is regulated.

Convention of Commerce between Great Britain and the United States. Signed at London, 3rd July, 1815: Renewed by Convention signed at London, 6th of August, 1827.

I. There shall be between all the territories of his Britannic Majesty in Europe, and the territories of the United States, a reciprocal liberty of commerce. The inhabitants of the two countries respectively shall have liberty freely and securely to come with their ships and cargoes to all such places, ports, and rivers in the territories aforesaid, to which other foreigners are permitted to come, to enter into the same, and to remain and reside in any parts of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and generally the merchants and traders of each nation respectively shall enjoy the most complete protection and security for their commerce; but subject always to the laws and statutes of the two countries respectively.

II. No higher or other duties shall be imposed on the importation into the territories of his Britannic Majesty in Europe, of any articles the growth, produce, or manufacture of the United States, and no higher or other duties shall be imposed on the importation into the United States, of any articles the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country, produce, or manufacture of either country respectively, the amount of the said drawbacks shall be the same whether the said goods shall have been originally imported in a British or American vessel; but when such re-exportation shall take place from the United States in a British vessel, or from the territories of his Britannic Majesty in Europe in an American vessel, to any other foreign nation, the two contracting parties reserve to themselves, respectively, the right of regulating or diminishing, in such case, the amount of the said drawback.

The intercourse between the United States and his Britannic Majesty's possessions in the West Indies, and on the continent of North America, shall not be affected by any of the provisions of this article, but each party shall remain in the complete possession of its rights, with respect to such an intercourse.

III. His Britannic Majesty agrees that the vessels of the United States of America shall be admitted, and hospitably received, at the principal settlements of the British dominions in the East Indies, viz., Calcutta, Madras, Bombay, and Prince of Wales's Island, and that the citizens of the said United States may freely carry on trade between the said principal settlements and the said United States, in all articles of which the importation and exportation, respectively, to and from the said territories, shall not be entirely prohibited: provided only, that it shall not be lawful for them in any time of war between the British government and any state or power whatever, to export from the said territories, without the special permission of the British government, any military stores, or naval stores, or rice. The citizens of the United States shall pay for their vessels, when admitted, no higher or other duty or charge than shall be payable on the vessels of the most favoured European nations, and they shall pay no higher or other duties or charges on the importation or exportation of the cargoes of the said vessels, than shall be payable on the same articles when imported or exported in the vessels of the most favoured European nations.

But it is expressly agreed, that the vessels of the United States shall not carry any articles from the said principal settlements to any port or place, except to some port or place in the United States of America, where the same shall be unladen.

It is also understood, that the permission granted by this article is not to extend to allow the vessels of the United States to carry on any part of the coasting trade of the said British territories, but the vessels of the United States having, in the first instance, proceeded to one of the said principal settlements of the British dominions in the East Indies, and then going with their original cargoes, or any part thereof, from one of the said principal settlements to another, shall not be considered as carrying on the coasting trade. The vessels of the United States may also touch, for refreshment, but not for commerce, in the course of their voyage to or from the British territories in India, or to or from the dominions of the Emperor of China, at the Cape of Good Hope, the island of St. Helena, or such other places as may be in the possession of Great Britain, in the African or Indian seas; it being well understood that in all that regards this article the citizens of the United States shall be subject, in all respects, to the laws and regulations of the British government, from time to time established.

IV. It shall be free for each of the two contracting parties, respectively, to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but before any consul shall act as such, he shall in the usual form be approved and admitted by the government to which he is sent; and it is hereby declared, that in case of illegal or improper conduct towards the laws or government of the country to which he is sent, such consul may either be punished according to law, if the laws will reach the case, or be sent back, the offended government assigning to the other the reasons for the same.

It is hereby declared, that either of the contracting parties may except from the residence of consuls such particular places as such party shall judge fit to be so excepted.

V. This convention, when the same shall have been duly ratified by his Britannic Majesty and by the president of the United States, by and with the advice and consent of their senate, and the respective ratifications mutually exchanged, shall be binding and obligatory on his Majesty and on the said United States for four years from the date of its signature; and the ratifications shall be exchanged in six months from this time, or sooner if possible.

Convention between Great Britain and the United States. Signed at London, the 20th of October, 1818; renewed by Convention, Signed at London, the 6th of August, 1827.

I. Whereas differences have arisen respecting the liberty claimed by the United States, for the inhabitants thereof, to take, dry, and cure fish, on certain coasts, bays, harbours, and creeks, of his Britannic Majesty's dominions in America, it is agreed between the high contracting parties, that the inhabitants of the said United States shall have, for ever, in common with the subjects of his Britannic Majesty, the liberty to take fish of every kind, on that part of the southern coast of Newfoundland which extends from Cape Ray to the Rameau Islands, on the western and northern coast of Newfoundland, from the said Cape Ray to the Quirpon Islands, on the shores of the Magdalen Islands, and also on the coasts, bays, harbours, and creeks, from Mount Joly, on the southern coast of Labrador, to and through the straits of Belleisle, and thence northwardly indefinitely along the coast, without prejudice, however, to any of the exclusive rights of the Hudson's Bay Company: and that the American fishermen shall also have liberty, for ever, to dry and cure fish in any of the unsettled bays, harbours, and creeks, of the southern part of the coast of Newfoundland hereabove described, and of the coast of Labrador; but so soon as the same, or any portion thereof, shall be settled, it shall not be lawful for the said fishermen to dry or cure fish at such portion so settled, without previous agreement for such purpose, with the inhabitants, proprietors, or possessors of the ground. And the United States hereby renounce for ever any liberty heretofore enjoyed or claimed by the inhabitants thereof, to take, dry, or cure fish, on or within three marine miles of any of the coasts, bays, creeks, or harbours of his Britannic Majesty's dominions in America, not included within the abovementioned limits:

provided, however, that the American fishermen shall be admitted to enter such bays or harbours, for the purpose of shelter and of repairing damages therein, of purchasing wood, and obtaining water, and for no other purpose whatever. But they shall be under such restrictions as may be necessary to prevent their taking, drying, or curing fish therein, or in any other manner whatever abusing the privileges hereby reserved to them.

Act of Congress "concerning the Convention to regulate the Commerce between the Territories of the United States and his Britannic Majesty." Approved the 1st of March, 1816.

Be it enacted and declared by the Senate and House of Representatives of the United States of America in Congress assembled, that so much of any act as imposes a higher duty of tonnage or of impost, on vessels, and articles imported in vessels, of Great Britain, than on vessels, and articles imported in vessels, of the United States, contrary to the provisions of the convention between the United States and his Britannic Majesty, the ratifications whereof were mutually exchanged the 22nd day of December, 1815, be, from and after the date of the ratification of the said convention, and during the continuance thereof, deemed and taken to be of no force or effect.

Act of the British Parliament "to carry into effect a Convention of Commerce concluded between his Majesty and the United States of America, and a Treaty with the Prince Regent of Portugal."

VI. And whereas it is expedient that vessels built in the countries belonging to the United States of America, or any of them, or condemned as prize there, and being owned and navigated as herein-before mentioned, should be allowed to clear out from any part of the United Kingdom for the principal settlements of the British dominions in the East Indies; viz., Calcutta, Madras, Bombay, and Prince of Wales's Island, with any articles which may legally be exported from the United Kingdom to the said settlements in British-built ships; be it therefore further enacted, that all vessels built in the said United States of America, or any of them, or condemned as prize there, and being owned and navigated as hereinbefore mentioned, shall be allowed to clear out from any port of the United Kingdom for the following principal settlements of the British dominions in the East Indies, viz., Calcutta, Madras, Bombay, and Prince of Wales's Island, with any goods, wares, or merchandise which may be legally exported from the United Kingdom to the said settlements in British-built vessels, subject to the like rules and regulations, restrictions, penalties, and forfeitures as are now by law imposed upon the exportation of such goods to the said settlements in British-built ships, any law, custom, or usage to the contrary notwithstanding.

VII. And be it further enacted, that nothing in this act contained shall extend, or be construed to extend to repeal or in anywise alter the duties of package, scavage, bailage, or portage, or any other duties payable to the mayor and commonalty, and citizens of the city of London, or to the Lord Mayor of the said city for the time being, or to any other city or town corporate within Great Britain, or any other special privilege or exemption to which any person or persons, bodies politic or corporate, is or are now entitled by law in respect of goods imported and exported, but the same shall be continued as heretofore.

Convention of Commerce, signed at London, August 6, 1827.

ART. I.—All the provisions of the convention concluded between his Majesty the King of the United Kingdom of Great Britain and Ireland, and the United States of America, on the 3rd of July, 1815, and further continued for the term of ten years by the fourth article of the convention of the 20th of October, 1818, with the exception therein contained as to St. Helena, are hereby further indefinitely, and without the said exception, extended and continued in force, from the date of the expiration of the said

ten years, in the same manner as if all the provisions of the said convention of the 3rd of July, 1815, were herein specifically recited.

ART. II.—It shall be competent, however, to either of the contracting parties, in case either should think fit, at any time after the expiration of the said ten years—that is, after the 20th of October, 1828—on giving due notice of twelve months to the other contracting party, to annul and abrogate this convention; and it shall, in such case, be accordingly entirely annulled and abrogated, after the expiration of the said term of notice.

Act of Congress of the United States, "to repeal the Tonnage Duties upon Ships and Vessels of the United States, and upon certain Foreign Vessels." 31st May, 1830.

SEC. I.—Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, that, from and after the 1st day of April next, no duties upon tonnage of the ships and vessels of the United States, of which the officers and two-thirds of the crew shall be citizens of the United States, shall be levied or collected; and all acts and parts of acts imposing duties upon the tonnage of ships and vessels of the United States, officered and manned as aforesaid, so far as the same relate to the imposition of such duties, shall, from and after the said first day of April next, be repealed.

SEC. II.—And be it further enacted, that, from and after the said 1st day of April next, all acts and parts of acts imposing duties upon the tonnage of the ships and vessels of any foreign nation, so far as the same relate to the imposition of such duties, shall be repealed: provided, that the President of the United States shall be satisfied that the discriminating or countervailing duties of such foreign nation, so far as they operate to the disadvantage of the United States have been abolished.

[Approved 31st of May, 1830.]

Proclamation of the President of the United States, opening to British Vessels the Trade between the British Colonial Possessions and the American Ports. 5th October, 1830.

Whereas, by an act of the Congress of the United States, passed on the 29th day of May, 1830, it is provided, that whenever the President of the United States shall receive satisfactory evidence that the government of Great Britain will open the ports in its colonial possessions in the West Indies, on the continent of South America, the Bahama Islands, the Caicos, and the Bermuda or Somer Islands, to the vessels of the United States, for an indefinite or for a limited term; that the vessels of the United States, and their cargoes, on entering the colonial ports aforesaid, shall not be subject to other or higher duties of tonnage or impost, or charges of any other description, than would be imposed on British vessels, or their cargoes, arriving into the said colonial possessions, from the United States; that the vessels of the United States may import into the said colonial possessions, from the United States, any article or articles which could be imported in a British vessel into the said possessions, from the United States; and that the vessels of the United States may export from the British colonies afore-mentioned, to any country whatever, other than the dominions or possessions of Great Britain, any article or articles that can be exported therefrom in a British vessel, to any country other than the British dominions or possessions as aforesaid—leaving the commercial intercourse of the United States, with all other parts of the British dominions or possessions, on a footing not less favourable to the United States than it now is; that then, and in such case, the President of the United States shall be authorised, at any time before the next session of Congress, to issue his proclamation, declaring that he has received such evidence, and that thereupon, and from the date of such proclamation, the ports of the United States shall be opened indefinitely, or for a term fixed, as the case may be, to British vessels coming from the said British colonial possessions, and their cargoes, subject to no other or higher duty of tonnage or impost, or charge of any description whatever, than would be levied on the vessels of the United States, or their cargoes, arriving from the said British possessions; and that it shall be lawful for the said British vessels to import into the United States, and to export therefrom, any article or articles which

may be imported or exported in vessels of the United States; and that the act, entitled, "An Act concerning navigation," passed on the 18th day of April, 1818, an act supplementary thereto, passed the 15th day of May, 1820, and an act, entitled, "An Act to regulate the commercial intercourse between the United States and certain British ports," passed on the 1st day of March, 1823, shall, in such case, be suspended or absolutely repealed, as the case may require:

And whereas, by the said act, it is further provided, that whenever the ports of the United States shall have been opened under the authority thereby given, British vessels and their cargoes shall be admitted to an entry in the ports of the United States, from the islands, provinces, or colonies of Great Britain, on or near the North American continent, and north or east of the United States.

And whereas satisfactory evidence has been received by the President of the United States, that, whenever he shall give effect to the provisions of the act aforesaid, the government of Great Britain will open, for an indefinite period, the ports in its colonial possessions in the *West Indies*, on the continent of *South America*, the *Bahama Islands*, the *Caicos*, and the *Bermuda* or *Somer Islands*, to the vessels of the United States, and their cargoes, upon the terms, and according to the requisitions of the aforesaid act of Congress:

Now, therefore, I, Andrew Jackson, President of the United States of America, do hereby declare and proclaim, that such evidence has been received by me; and that by the operation of the act of Congress, passed on the 29th day of May, 1830, the ports of the United States are, from the date of this proclamation, open to British vessels coming from the said British possessions, and their cargoes, upon the terms set forth in the said act; the act entitled, "An Act concerning navigation," passed on the 18th day of April, 1818, the act supplementary thereto, passed the 15th day of May, 1820, and the act, entitled, "An Act to regulate the commercial intercourse between the United States and certain British ports," passed the 1st day of March, 1823, are absolutely repealed; and British vessels and their cargoes, are admitted to an entry in the ports of the United States, from the islands, provinces, and colonies of Great Britain, on or near the North American continent, and north or east of the United States.

Given under my hand, at the city of Washington, the 5th day of October, in the year of our Lord 1830, and the 55th of the independence of the United States.

By the President:

ANDREW JACKSON.

M. VAN BUREN,

Secretary of State.

British Order in Council, for regulating the Commercial Intercourse between the United States and the British Colonial Possessions. 5th November, 1830. At the Court of St. James's, the 5th day of November, 1830. Present, the King's most excellent Majesty in Council.

Whereas by a certain act of parliament, passed in the sixth year of the reign of his late majesty, King George the IVth [cap. 114.], entitled, "An Act to regulate the Trade of the British Possessions Abroad," after reciting that, "by the law of navigation, foreign ships are permitted to import into any of the British possessions abroad, from the countries to which they belong, goods, the produce of those countries, and to export goods from such possessions, to be carried to any foreign country whatever, and that it is expedient that such permission should be subject to certain conditions;" it is, therefore, enacted, "that the privileges thereby granted to foreign ships shall be limited to the ships of those countries which, having colonial possessions, shall grant the like privileges of trading with those possessions to British ships, or which, not having colonial possessions, shall place the commerce and navigation of this country, and of its possessions abroad, upon the footing of the most favoured nation, unless his majesty, by his order in council, shall, in any case, deem it expedient to grant the whole, or any of such privileges, to the ships of any foreign country, although the conditions aforesaid shall not in all respects be fulfilled by such foreign country."

And whereas by a certain order of his said late majesty in council, bearing date the 27th day of July, 1826, after reciting, that the conditions mentioned and referred to in the said act of parliament had not in all respects been fulfilled by the government of the United States of America, and that, therefore, the privileges so granted as aforesaid by the law of navigation to foreign ships, could not lawfully be exercised or enjoyed by the ships of the United States aforesaid, unless his majesty, by his order in council, should grant the whole or any of such privileges to the ships of the United States aforesaid: his said late majesty did, in pursuance of the powers in him vested by the said act, grant the privileges aforesaid to the ships of the said United States; but did thereby provide and declare that such privileges should absolutely cease and determine in his majesty's possessions in the West Indies and South America, and in certain other of his majesty's possessions abroad, upon and from certain days in the said order appointed, for that purpose, and which are long since passed:

And whereas, by a certain other order of his said late majesty in council, bearing date the 16th of July, 1827, the said last-mentioned order was confirmed; and whereas, in pursuance of the acts of parliament, in that behalf made and provided, his said late majesty, by a certain order in council, bearing date the 21st day of July, 1823, and by the said order in council bearing date the 27th day of July, 1826, was pleased to order, that there should be charged on all vessels of the said United States, which should enter any of the ports of his majesty's possessions in the West Indies or America, with articles of the growth, produce, or manufacture, of the said states, certain duties of tonnage and of customs therein particularly specified:

And whereas it hath been made to appear to his majesty in council, that the discriminations heretofore imposed by the laws of the United States aforesaid, upon British vessels, navigated between the said states and his majesty's possessions in the West Indies and America, have been repealed, and that the discriminating duties of tonnage and customs heretofore imposed by the laws of the said United States upon British vessels and their cargoes, entering the ports of the said states from his majesty's said possessions, have also been repealed, and that the ports of the United States are now open to British vessels and their cargoes, coming from his majesty's possessions aforesaid; his majesty doth, therefore, with the advice of his privy council, and in pursuance and exercise of the powers so vested in him, as aforesaid, by the said act, so passed in the sixth year of the reign of his said late majesty, or by any other act or acts of parliament, declare, that the said recited orders in council, of the 21st day of July, 1823, and of the 27th day of July, 1826, and the said order in council, of the 16th day of July, 1827 (so far as such last-mentioned order relates to the said United States), shall be, and the same are, hereby respectively revoked:

And his majesty doth further, by the advice aforesaid, and in pursuance of the powers aforesaid, declare that the ships of and belonging to the said United States of America, may import from the United States aforesaid, into the British possessions abroad, goods the produce of those states, and may export goods from the British possessions abroad to be carried to any foreign country whatever.

And the right honourable the Lords Commissioners of his Majesty's Treasury, and the Right Honourable Sir George Murray, one of his majesty's principal secretaries of state, are to give the necessary directions herein, as to them may respectively appear.

JAMES BULLER.

CHAPTER XLII.

COMMERCIAL POLICY AND LEGISLATION OF ENGLAND AND AMERICA.

I. ENGLAND.

IN order to comprehend, distinctly, the commercial policy, and legislation, of the United States of America, it will be indispensable to review, cursorily, the former, and recent, commercial policy, and legislation of England; and, it will then appear evident, that all the erroneous principles, which have degraded the commercial laws of America, bear a closely imitative affinity to those fallacious legislative commercial enactments, that have been maintained, since the first planting of her trans-Atlantic colonies, by England.

It would have been superfluous to advert to the former, and recent, commercial policy of England, were it not, that in the United States, and in the states of continental Europe, the *example of England, however unsound, is always referred to, by the advocates of the fallacies of legislative protection to national industry, ingenuity and enterprise.* We state boldly, that England owes not her prosperity to the precious legislative protection, which America and other nations, extol as sagacious wisdom; or, as grasping maritime, and commercial, monopoly, on the part of the rulers, and lawgivers, of Britain. We repeat, that which we have frequently endeavoured to prove, and which happily, although the progress of conviction has been slow, is now very generally believed in the United Kingdom, and which will be, at no remote period, as generally entertained, and acted upon, in the United States,—but which foreign statesmen, and foreign writers, have very seldom admitted.—We repeat, that England has attained her prosperity,—not by the aid,—but in defiance, of her illiberal commercial system;—that England has owed her wealth, and power, and even her liberty, to her geographical position; to her many commanding harbours; to her fisheries, which originated her naval architecture and her fleets; to the vast power of production, yielded by her mines of coal and iron—*interstratified* for the coal to smelt the iron;—to the all fields, generally, of the north, central, and western counties, and of Wales; to the coal and iron of the Clyde; to the salt mines of Cheshire, and Gloucestershire; to the copper and tin mines of Cornwall and Wales;—to her geological formation, from her granite, and limestone, to the chalk and sandstone;—to the variety, elevations, and depressions of her soils, rising, from the rich, low, lands of Kent, Essex, Norfolk, and Lincolnshire,—from the fertile valleys and plains of the south, and of the central counties, up to the pastures, on the heights of the South Downs,—on the hills of Devonshire and Somersetshire,—and up to the peaks of Derby, and to the mountains of Wales and Cumberland:—to soils and pastures, varying from the straths, and dales, of Scotland, up to the brows of the Cheviot and Pentland hills, and, north, to Bredalbane, to the Grampians, and to the highlands:—to the materials for building, which her stone, lime, and slate.

quarries, and her clays, and her woods, have yielded;—to her oak, and other forests, which enabled her to build her war fleets, her merchant ships, her coasting vessels, and her fishing boats, until wood, when wanted, could have been brought to her ports, and ship yards, from afar;—to the very inconstancy of a climate, not liable to great heat, nor to intense cold:—and, superadded to these great natural advantages,—to those political, moral, and inventive elements, without which all other blessings would have been of minor power:—that is to say,—to civil liberty, under the constitution of England, founded on the Magna Charta, and strengthened, and secured by the Petition of Rights, the Habeas Corpus Act, the Bill of Rights, and the Act of Settlement:—to the perseverance, and industry of her people;—to the enterprise of her manufacturers, and the skill of her artisans; to the Bridgewater canal, and the canals which it originated;—to the steam-engine, spinning-jenny, mule, and power-loom;—to the adventurous spirit of her princely merchants;—and, to the hardy intrepidity of her brave mariners:—To all these physical, and moral elements, does Great Britain owe her power, and prosperity,—her manufacturing and commercial wealth,—her ability, in the maintenance of her power and credit, to pay high taxation and high rents:—in despite of monopolies, protective duties, and dear food;—in despite of all these *banes to national prosperity*—*banes to national progress*, which all countries, and none more so than the United Kingdom, and the United States, would act wisely by cancelling from their legislation.

Nor must it be forgotten, that England also escaped, on her own soil, the perpetual wars, which devastated, and prevented the manufacturing industry of the continental states of Europe; and although her taxation, and her public debt, have been carried to an incredible height, and her people compelled to pay far higher for maintaining existence, than those of any other country; yet the genius and character of her people, and the natural advantages of the British islands, have enabled her, in defiance of Napoleon's wars and decrees—in spite of high taxation and dear food, to enrich herself, so far, as to bear all her war burdens. Her people were enabled to do all this, and to pay those high prices for bread and butchers' meat, which served to yield high rents to the landlords of the United Kingdom;—not by restrictive legislation, but by home industry, and by maritime enterprise,—by a most profitable carrying-trade,—and, by throwing her manufactures, with great gain, into all the markets of the world: while the industry, of other European countries, was paralyzed by the insecurity, occasioned by desolating invasions.

In time of war, the harbours of England gave her military, and commercial, fleets, an incalculable advantage over those of continental Europe. Lying west of the continent, the prevailing winds, which prevented foreign ships from putting to sea, enabled those of the east coasts, of Britain, and Ireland, to leave their ports; those of the west coasts being at the same time safe, from their position, as well as from the protection of our ships of war, cruising in, and off, the entrance of

the English and Irish Channels. Thus, while the nations of the continent were disturbed in all their industrious pursuits, Great Britain enjoyed, from her geographical situation and commanding harbours, peace at home, and the opportunity of supplying the rest of the world with her domestic fabrics and the produce of her colonies. In defiance of the Berlin and Milan decrees, our manufactures found their way into the heart of Germany, and Italy; while, even in France, we clothed the soldiers of Napoleon! Thus, although taxed, beyond all possible calculation of endurance, the natural advantages of England, and the enterprise of her people, enabled her to withstand, in magnificent splendour, the convulsions that shook the continent to its foundation.

During the whole period of the last war, and since the days of Charles II., the navigation laws of England, and the system of high duties, or the prohibition of the fabrics of other countries, similar to those manufactured in the United Kingdom, were, it is true, in full force: the only *valve* of elusion, escape, and circumvention of these laws, *being the contraband trade*.

But let us fully understand the condition of Europe, and of America, during that period.

For a great portion of the time which elapsed between the passing of the navigation act* and the peace of Utrecht, the continent of Europe was involved in

* We have never attributed our maritime greatness to the much extolled Navigation Act. The geographical position of England rendered her always, to some extent, a maritime power. The Danish invasions, and their settlement in various parts of Britain, increased the spirit of naval adventure, and tolls and customs were levied in the port of London before the *Angles* discontinued selling their children to foreign countries, which slave trade did not cease until the latter part of the time of Canute the Great. In the reign of King John, 1213, his fleet is said to have captured 300, and sunk 100 French ships near Helvoetsluys, being the greater part of a French fleet, sent by Philippe Augustus against the Flemings; and we find a commercial and navigation treaty between England and Norway, as early as 1230, and a similar treaty with Flanders as early as 1274.

In 1302, the same year that the mariner's compass is asserted to have been invented, Edward I. passed a law, *Charta Mercatoria*, for the protection of *foreign merchants in England*; and the Cinque Ports were then compelled to provide him with fifty-seven ships. Two years after, he was enabled to *lend her biggest ships of war to France*.

During the fourteenth century we find that treaties of commerce and navigation had been concluded between England, and Portugal, Spain, Venice, Holland, Genoa, the towns of Flanders, Cologne, Pisa, and with Scotland and Finland. Edward III. had a great galley built for him at Nice. In 1393 England *lends* ships of war to Denmark. In 1483 the king of England prohibits the importation of foreign manufactures.

In 1512, the king formed a permanent royal navy. He had one ship of 1000 tons, and hired two ships of war to Venice to fight against the Turks.

The first navigation act on record is that of the 5th, Richard II., 1381, which enacted in substance, "That for increasing the shipping of England, of late much diminishes, none of the king's subjects shall hereafter ship any kind of merchandise either outward or homeward, but only in ships of the king's subjects, on forfeiture of their ships and merchandise, in which also the greater part of the crew shall be the king's subjects."

Henry VII. prohibited the importation of certain commodities, unless imported in ships belonging to English owners, and manned by English seamen. By the 5 Eliz. c. 5, foreign ships were excluded from our fisheries and coasting trade. The Parliament, in 1650, prohibited all ships, of all foreign nations whatever, from trading with the plantations in America, without having previously obtained a licence; and on the 9th of October, 1651, the Parliament of the Commonwealth passed the famous *Act of Navigation*, intended 'to promote British navigation, and to weaken or destroy the naval power of the Dutch.' The act declared 'that no goods or commodities whatever, of the growth, production, or manufacture of Asia, Africa, or America, should be im-

war, and manufacturing industry was consequently paralysed except in England. The fleets of England were generally victorious, and often enriched the country

ported either into England or Ireland, or any of the plantations, except in ships belonging to English subjects, and of which the master and the greater number of the crew were also English; that no goods of the growth, production, or manufacture of any country in Europe, should be imported into Great Britain, except in British ships, or in such ships as were the real property of the people of the country or place, in which the goods were produced, or from which they could only be, or, most usually were, exported.

The Dutch had but little home produce to export. The act of the Commonwealth not having been allowed to remain on the statute-book, the provisions of the Navigation Act were embodied, with some little modifications, in the act of 12 Car. 2, c. 18. It was broadly proclaimed, and considered to be, the *Charta Maritima* of England!

In the 14th of Charles II. a supplemental statute was passed, for obviating evasions of the previous statute. The latter statute prohibited all importation of a long list of enumerated commodities, under any circumstances, or in any vessels, whether British or foreign, under the penalty of seizure and confiscation of the ships and goods, from Holland, the Netherlands, Germany, Turkey, and Russia, were included in the 12 Car. 2, c. 18.

Amongst the very few fallacies uttered by Adam Smith, is his admiration of the navigation laws. 'When,' says he 'the act of navigation was made, though England and Holland were not actually at war, the most violent animosity subsisted between the two nations. It had begun during the government of the long parliament, which first framed this act, and it broke out soon after in the Dutch wars during that of the Protector and of Charles II. It is not impossible, therefore, that some of the regulations of this famous act may have proceeded from national animosity. They are as wise, however, as if they had all been dictated by the most deliberate wisdom. National animosity at that particular time aimed at the very same object which the most deliberate wisdom would have recommended,—the diminution of the naval power of Holland, the only naval power which could endanger the security of England. The act of navigation is not favourable to foreign commerce, or to the growth of that opulence which can arise from it. The interest of a nation in its commercial relations to foreign nations is like that of a merchant with regard to the different people with whom he deals, to buy as cheap and to sell as dear as possible. But the act of navigation, by diminishing the number of sellers, must necessarily diminish that of buyers; and we are thus likely not only to buy foreign goods dearer, but to sell our own cheaper, than if there was a more perfect freedom of trade. As defence, however, is of much more importance than opulence, the act of navigation is, perhaps, the wisest of all the commercial regulations of England.'—*Wealth of Nations*.

Mr. MacCulloch, on this opinion, makes the following judicious remarks. "It may, however, be very fairly doubted, whether, in point of fact, the navigation law had the effects, here ascribed to it; of weakening the naval power of the Dutch, and of increasing that of this kingdom. The Dutch were very powerful at sea, for a long period after the passing of this act; and it seems natural to conclude, that the decline of their maritime preponderance, was owing rather to the gradual increase of commerce and navigation in other countries, and to the disasters and burdens occasioned by the ruinous contests the Republic had to sustain with Cromwell, Charles II., and Louis XIV., than to the mere exclusion of their merchant vessels from the ports of England. It is not meant to say, that this exclusion was altogether without effect. The efforts of the Dutch, to procure a repeal of the English navigation law, show that, in their apprehension, it operated injuriously on their commerce. It is certain, however, that its influence, in this respect, has been greatly over-rated in this country. *Excessive taxation*, and not our navigation law, was the principal cause of the fall of profits, and of the decline of manufactures, commerce, and navigation in Holland. 'Les guerres,' says the well-informed author of the *Commerce de la Hollande*, 'terminées par les traités de Nimègue, de Ryswick, à Utrecht, et enfin la dernière par le traité d'Aix-la-Chapelle, ont successivement obligé la République de faire usage d'un grand crédit, et de faire

with the spoils of the enemy; the Anglo-Americans carried on an active contraband trade in supplying the Spanish, and French, colonies, in America, and in the West Indies with British manufactures; although Spain and France prohibited any foreign trade or intercourse with their colonies. The periods of peace, which occurred between the treaty of Utrecht, in 1713, and the general peace of the world, 102 years afterwards, were of far too short duration for the nations of Europe to become great manufacturing states. The French, and Germans, and Flemings, were industrious; but the profligate extravagance of Louis XIV., the derangement of the public revenues under Louis XV. and his unfortunate successor,—the extortion of the farmers general, and the degraded state of the industrious, and productive, classes in France, were all

des emprunts énormes pour en soutenir les fraix. Les dettes ont surchargé l'état d'une somme immense d'intérêts, qui ne pouvoient être payés que par une augmentation excessive d'impôts, dont il a fallu faire porter la plus forte partie par les consommations dans un pays qui n'a qu'un territoire extrêmement borné, et par conséquent par l'industrie. Il a donc fallu faire enchérir infiniment la main-d'œuvre. Cette cherté de la main-d'œuvre a non seulement restreint presque toute sorte de fabrique et d'industrie à la consommation intérieure, mais elle a encore porté un coup bien sensible, au commerce de frêt, partie accessoire et le plus précieuse du commerce d'économie: car cette cherté a rendu la construction plus chère, et augmenté le prix de tous les ouvrages qui tiennent à la navigation, même de tous les ouvrages des ports et des magasins. Il n'étoit pas possible que l'augmentation du prix de la main-d'œuvre ne donnât, malgré tous les efforts de l'économie Hollandoise, un avantage sensible aux autres nations qui voudroient se livrer au commerce d'économie et a celui de frêt.—(Tome ii. p. 221.)

"This extract, which might, were it necessary, be corroborated by others to the same effect from all the best Dutch writers, show that it is not to our navigation law, nor to the restrictive regulations of other foreign powers, but to the abuse of the funding system, and the excess of taxation, that the decline of the commercial greatness and maritime power of Holland was really owing. Neither does it appear that the opinion maintained by Dr. Smith and others, that the navigation law had a powerful influence in augmenting the naval power of this country, rests on any better foundation. The taste of the nation for naval enterprise had been awakened, the navy had become exceedingly formidable, and Blake had achieved his victories, before the enactment of this famous law. So far, indeed, is it from being certain that the navigation act had, in this respect, the effect commonly ascribed to it, that there are good grounds for thinking it had a precisely opposite effect, and that it operated rather to diminish than to increase our mercantile navy. It is stated in Roger Coke's *Treatise on Trade*, published in 1671 (p. 36), that this act, by lessening the resort of strangers to our ports, had a most injurious effect on our commerce; and he further states that we had lost, within two years of the passing of the act of 1650, the greater part of the Baltic and Greenland trades. (p. 48.) Sir Josiah Child, whose treatise was published in 1691, corroborates Coke's statement; for while he decidedly approves of the navigation law, he admits that the English shipping employed in the East India, and Baltic trades, had decreased at least *two thirds* since its enactment, and that the foreign shipping employed in these trades had proportionally increased. (*Treatise on Trade*, p. 89, Glasg. edit.) Exclusive of these contemporary authorities, it may be worth while to mention, that Sir Matthew Decker, an extensive and extremely well-informed merchant, condemns the whole principle of the navigation act; and contends that, instead of increasing our shipping and seamen, it had diminished them both; and that, by rendering the freight of ships higher than it would otherwise have been, it had entailed a heavy burden on the public, and been one of the main causes that had prevented our carrying on the fishery so successfully as the Dutch. (*Essay on the Causes of the Decline of Foreign Trade*, p. 60, ed. 1756.)

ruinous to French manufactures, notwithstanding the genius and thrift of the artisans and manufacturers of Paris and other towns. To a certain extent, the silk manufacturers of Lyons, who always declaimed against legislative protection, formed a remarkable exception;* and this *prosperity* was favoured by the contraband trade in French silks, prohibited to be legally imported into England.

In Germany, including the Austrian dominions, the inhabitants were not sufficiently advanced in the arts, nor were the feudal, or military, systems of those countries favourable to manufacturing industry. Pasturage and agriculture were more immediately remunerative occupations: both the latter could be resorted to with little means, even by the soldier on *furlough*. Excepting some imperial and royal fabrics, producing some porcelain, glass, and other articles of luxury, all at an enormous cost;—excepting, also, the common woollens and linens, spun and woven, in most countries, by the peasantry, and common smiths' work, and the rough gear, and other articles made by millwrights, wheelwrights, and other ordinary artisans, there were but two manufactures, of any great importance, in all Germany, including the Austrian dominions. These manufactures were the linen fabrics, chiefly of Silesia, and the woollens, especially the fine cloths of Saxony. *Both attained perfection without any legislative protection: without the government prohibiting, or imposing high duties on, British or other linens or woollens: without, as in England, Scotland, and Ireland, on linens, as in France on woollens, excluding, by prohibitions and duties: without premiums on their exportation, or bounties on their being made, and used, for home consumption.*

England at one time imposed legislative impositions, or prohibitions, on both foreign linen and woollen manufactures. But, *cui bono?* Did either thrive in consequence? Certainly not. The wars of Frederick the Second, and the wars of Napoleon, which involved, in ruin, the peaceful homes, and industry, of Saxony and Silesia, rendered useless high duties on, or prohibitions of, the linens and woollens of those countries, in England.

The manufactures of Venice, and of Italy, were on the decline; and, as far as they entered into the general traffic of the world, were vanishing before the wars of the French revolution. Those of Flanders and Holland, also, had been paralysed by those, and previous, wars. The characteristic industry, and thrifty habits of the Dutch, and Flemings, did not abandon them; but the wars caused them to fail in producing fabrics, to compete with those of England.

Denmark, Sweden, and Russia, never had, before the peace of 1814, any manufactures of consequence. Portugal had none, except some jewellery, common trinkets, and the ordinary woven fabrics of the peasants, and the common articles, made by ordinary handicraftsmen. Long before the date of the unwise Methuen treaty, British woollens were worn, and used, in Portugal.

* See Commercial Statistics. Part V. France.

The imbecility of the Spanish monarchs, and administrators,—the bigotry of the ecclesiastics,—and the ignorance, and superstition, of the common people,—and the pride and haughty character of the aristocracy, rendered it impossible, at all times, for that country to manufacture in competition with England.

Anglo-America was not, nor, during the colonial sway, England would not allow her to become, a manufacturing country; and, although we have denounced that policy as arbitrary and unjust on the part of England, it would not have been profitable for America to fabricate articles, which would have been supplied much cheaper by England, in exchange for the raw materials of the old colonies, and for the money realised by the trade carried on, illicitly, or otherwise, with the foreign West Indies.

With the exception of one article, therefore, there were none that, it could have been even pretended, any other country was able to manufacture cheaper than England: that article consisted of silk in its various forms. Yet in Lyons, the chief, and most profitable, seat of the silk manufactures, the manufacturers always denounced legislative interference, and protection. In order to create magnificent silk manufactures in Spitalfields and Derby, French silks were absolutely prohibited until 1828; and, since then, high, and in many cases prohibitory duties, have been imposed, and are still imposed, on French silk manufactures. Now what has been the result of high duties, or prohibitions, in England? It is evident that the manufacturers of cotton, of wool, of metals, and of earthenware, never—or scarcely ever—looked up to high duties, and prohibitions, as protections, under which they should rise and flourish. They naturally considered the home demand, as a remunerating market; but they looked, also, to the markets of the world for their fabrics, and in which, if they did not manufacture as cheaply, as other countries, they must sell at a loss, and not at a profit. Can any French, or German, or American statesman, or legislator, or politician, or elector, or manufacturer, or shipowner, be sufficiently credulous to believe, that English manufacturers, would have persisted, since the days of Charles the Second, in fabricating goods, extensively, for supplying foreign markets, at a loss, because a monopoly of the home market was secured to them by the legislature?

No! It is evident that whenever an article, of any importance, continues to be exported to a foreign market, it cannot be injured, by a similar article, manufactured abroad, entering into competition in the home market with the home-produced article: otherwise, the home-produced fabric could not be prepared for any market so cheaply as the foreign article,—and, consequently, would not sell in a foreign market, except at a loss: that is, at a price as low as a similar foreign article of equal quality.

It was attempted, in the United Kingdom, to rear and encourage linen manufactures, by prohibiting, or nearly excluding, by high duties, all foreign manufactures of flax, except linen yarns: the latter being required for the looms, the importation of them chiefly from Silesia. Bounties were also granted on the exportation

of linens. The whole fallacious expedient proved a miserable failure. The forced manufacture, was never really profitable, but it was expensive. The Scotch linen-spinners, weavers, and bleachers, did not depend upon artificial, but upon the intrinsic cheapness of their fabrics, and upon economy: they considered the bounty on the exportation of linens a free gift, which they did not refuse to accept. The bounty upon linens, exported, was abolished, and the prices actually increased. We could, without difficulty, prove, in all other cases of productive industry, as well as in regard to linen manufactures, that protection has been the bane of prosperity; and that competition, where the practical elements of production exist, is the true promoter of perfecting, and rendering profitable, and consequently prosperous, the works of labour and ingenuity.

Of all the fabrics of England, the silks of Spitalfields have been the most highly protected. Yet there are not so wretched a body of artisans, in the United Kingdom, as the silk weavers of that dirty, unhealthy, squalid district. The weather-beaten, daring, smuggler, has always despised the customs laws, and the coast guards, upon which depended the shrivelled, degraded, and feeble artisans, who have inhabited, and now inhabit, the miserable dwellings in the south-eastern London districts. If there had been no prohibitions, or high duties, the silk manufactures of Spitalfields, would have either never existed, to tempt men into wretched employment, or, they would have arisen, and prospered, on fair, practical grounds of moral, and natural, advantages, or principles; and, would have, consequently, entered into profitable competition with similar fabrics produced elsewhere. The weavers, and others, concerned as artisans, would have clean, and salubrious, places of abode,—they would have had a sufficiency of what we believe they have never had, either in the present generation, or in past generations,—that is, a sufficiency of wholesome food, and decent clothing. Instead of which, they were miserable when foreign silks were prohibited; they continue miserable, when there have been only modifications in the duties, so far as still to allow the smuggler ample profits, by eluding the duties, of from thirty to sixty per cent, on fabrics which are small in bulk compared with their great value. We have little hope of greatly ameliorating the wretchedness of the present generation of silk weavers in Spitalfields; but let us not entice, by the fallacious hypocrisy of high duties, another generation into the same, or similar abodes of wretchedness.

But whenever a diminution of duties upon foreign articles has been attempted, the manufacturers, of similar articles at home, have very generally, though not always, proclaimed, that ruin must be the consequence. We have never discovered that this effect has followed; and the only arts, or manufactures, which we have found not to prosper have been those, for which natural, and moral, elements were not favourable, and which, consequently, ought never to have been attempted. One drawback we have to observe,—that is, when the raw material has been highly taxed. When the duties were lately reduced on gloves,

and manufactures of leather, on leather itself,—on rosin, by the distillers of turpentine,—all engaged in those fabrics assured the Board of Trade *that they could be ruined*. But they have all gone on, since then, prospering: so has experience, in England, proved it to have been, in all cases, where restrictions have been abolished,—and such will be the salutary effect of removing every duty, which has been imposed, under the assumption of *protecting* any branch of productive industry.

Were it otherwise, we should still consider it pernicious, and unjust, in a government, or a legislature, to tax any one class, or any one individual, at the expense of another.

We lay it down as a sound principle, that the *occupations of the people, commodities, and commerce, should not*, any one of the three, be taxed at the expense of the other two.

Since the year 1821 there have been great modifications in the British customs duties. The tariffs of 1842, and 1845, have constituted the greatest advances since Mr. Pitt's tariff in 1787, towards sound principles; but the existing tariff still includes the most pernicious rates of duties. Modifications of the navigation laws, have also been made.—*See Navigation and Customs Laws.*

As to the terms RECIPROCITY, and PROTECTION, the first, as well as the last term, has been fertile in fallacious arguments. The advocates of reciprocity contend, that we should not, in England, reduce our customs duties, if other countries do not diminish their import taxes. In plain language, that so long as other nations continue to do what is *wrong*, the British government, and parliament, should also maintain that which is *wrong*—that we should not do that, which, we know, to be *right*, because other nations do not, simultaneously, decide upon doing that which is *right*.

When the interchange of commodities, either raw or manufactured, between the inhabitants of a town or district, is subjected to no other restriction than, its just proportion, of the tax purely necessary to maintain its *security* and its *municipal order*, and to defray the expense of erecting and supporting *indispensable public buildings and institutions*, we find, in that case, practical *free trade* existing, within such town or district, based upon a common interest, which each individual will, from personal interest, struggle to maintain in its peaceful course.

A great nation is a great community, and all the nations of the earth, if the intercourse and trade between them were as free as between the individuals of a municipality, would then actually enjoy a peaceful and profitable system of common intercourse, based upon common interests, which it would be ruinous to any one of the nations concerned to disturb. The greater the commercial relations between the nations, the more disastrous would be the consequences of a war which would interrupt their reciprocity of interests. In proportion as this commercial and reciprocal interest has been of long standing, and of great extent, the greater would be the securities for the maintenance of peace, and the

more disastrous would be the calamity, of continuing a war, between two or more countries so circumstanced.

All wars are, more or less, detrimental to the production of wealth, but a suspension of intercourse with a nation in which England finds but a trifling demand for her manufactures, would be of minor consequence, provided such war did not interrupt our intercourse with countries whose trade was of important value. A suspension of intercourse, for example, between England and America, could, only with great loss to both, from the long duration, and enormous extent of their mutual intercourse, be possibly maintained.

A WAR of MATERIAL INTERESTS, or, more properly speaking, of MATERIAL INJURIES—that is, a *war of custom-houses or fiscal forts*, with their *garrisons of revenue officers and servants*, has long been declared and carried on between most European nations. This warfare of interests, or injuries, has not ceased with the wars of bloodshed; and, if we may ever expect security against a recurrence of the calamities attendant on, and consequent to the latter, it will be, when we destroy the elements of the former,—in short, by the *extension of free trade between all nations*.

In the history of Europe we cannot discover a sovereignty, great or insignificant, that has not maintained its war of material injuries against its neighbours, during the usually considered state of peace, as well as when engaged in actual armed hostility.

There is no theory, probably, more flattering to princes and statesmen, or to a whole nation, than to institute measures which hold out independence of all other nations, by producing, and manufacturing, at home, all that is considered necessary and luxurious. It was easy to win a prince, and people, to adopt the application of so very plausible a delusion. Louis XIV., authorised M. Colbert to revise and establish* those fabrics which that monarch, by his *dragonades*, and by revoking the edict of Nantes, nearly ruined; while he, at the same time, drove the most skillful artisans from France into England, Holland, and Germany. M. Colbert, one of the most honest and patriotic ministers, of whom France can boast, directed his steadfast attention to financial reform; but, unfortunately for his country, he became dazzled with the fallacious principle of forcing home manufactures by monopolies, by *premiums*, and by imposing duties on those of other countries. He encouraged, by large bounties, and by exclusive privileges, manufacturers to settle in France; he protected them by despotic laws, without considering that he was taxing, and oppressing, the many for the benefit of the few,—that he was destroying

* M. Colbert did not, however, establish the system of prohibition. The duties he imposed on imports, never exceeded ten per cent *ad valorem*. "He gave way to national prejudice," says Voltaire, "against the freedom of trade in corn." With the exception of his erroneous though patriotic views respecting manufactures, we are bound to admit the general wisdom of Colbert's administration. He had to struggle all his life against rivals and prejudices. The king was shamefully ungrateful to him. The aristocracy detested him, and his unpopularity was so great, when he died in 1683, that he was buried at night to prevent a riot.

that competition which creates cheapness, and perfection, in manufactures, —that his bounties, and duties, were taxes on the whole community, and especially on the agriculturists, who have ever since been oppressed by duties, nearly prohibitory, on the article *iron*: most necessary, for ploughs, harrows, and all other implements of husbandry. The system of Colbert, however, became exceedingly popular. Its promised grandeur, flattered national vanity; and neither the monarch, nor the people, nor Colbert himself, understood its fallacy. Political economy was then unknown.

If we are to be governed by the lessons of experience, we are led to the following conclusions, on the taxing of commodities; whether levied, by an excise on the produce of home labour, or, by a customs, on foreign or colonial articles.

In order to obtain the greatest revenue, from taxes so imposed, the maximum of taxation will be the point, which will yield the most revenue, without that maximum ascending higher than the point, where it commences to reduce the consumption of the taxed article, in a greater ratio than the increase of the tax: or if the article taxed, be imported from, or similar to one produced in, a foreign country, the tax must not, whether the object be revenue, or, the fallacy called, protection, be so high, as to leave any profit, exclusive of the risk, to the contraband trader.

The governments of nearly all countries have, probably as far back as their foundation, exacted tribute, or tolls, on the importation, or exportation, of commodities. The department of government, established to levy those taxes, was variolously named. It was originally neither more nor less than a toll-house, erected at in and passes, or at landing-places, for collecting a tribute to be paid to the king, or prince. In progress of time, it grew up to be one of the most formidable departments of state,—by the sea-coast, by straits, by rivers, and by land. In Germany the name is still *Zoll*, or toll,—in France, *Douane*, in Italy, *Dogana*.

Commodities produced in one country, and imported into another country, to be used therein, can only enter extensively into consumption when the price is, as *low* as, or *lower* than, that which similar commodities can be produced at home.

The natural advantages, or disadvantages, of soil, climate, minerals, raw materials, geographical position, population, and the state of the arts and sciences, vary so greatly in one country from those of another, that some countries *can* produce some commodities, which others *cannot*, at equally low prices.

Commodities which a country does not produce at all, or only at high prices, can be consumed, by the non-producing, or dear-producing, country, with more advantage, and in greater quantity, if those articles are purchased at, and brought from, the places where they are to be found at the cheapest cost.

There is no country, with ordinary advantages, that does not produce some commodities so cheaply, as to find a market for what it produces, over its home consumption, in some other country; and, from which a different kind of article may be brought, with profit, in return.

This interchange constitutes international trade.

The more numerous, or more burdensome, are the restrictions, the more limited will this commerce be.

The fewer and lighter are the restrictions, the more extended will it prove.

All experience forms evidence of these facts.

If a nation were in a condition that its administration, and security, could be

maintained without *exacting that TAX upon the value* of COMMODITIES, which constitutes, not the whole national income, but, as usually levied, what is termed the *indirect public revenue*, then no *duty* whatever should be levied either upon articles produced at home, or upon those imported from foreign countries.

A public revenue being indispensable to defray the necessary public expenditure, PROPERTY, whether in LAND, or in COMMODITIES *produced at home, or imported from abroad, ought to be taxed*, or made to yield up annually a *just proportion* of its *rent, or profit*, equal to the amount of the *annual legitimate claims upon the nation*. This proportion of the *annual rent, or profit*, of PROPERTY would then form the *whole amount of equitable taxation; levied upon all that could equitably constitute the WHOLE NATIONAL INCOME*.

But unless the revenue required be small, and the property taxed be such as not to render the collection of the tax inquisitorial, direct taxes will not be willingly submitted to. Yet they are submitted to in every state in Europe, though scarcely at all in the United States of America. But in levying a revenue, independently of direct taxation, if commodities which enter into home consumption are to be taxed, the equitable scale of levying this tax would be, to impose exactly the same duty upon an article, produced at home, as upon a similar article, imported from abroad.

There can be no other equitable scale of taxing commodities, whether produced at home, or imported from abroad, for domestic consumption.

The producer never pays the tax upon the article he produces; he must add, to make any profit by it, the duty, or tax, as well as his profit, to the cost of production, and then the consumer pays the whole, including the tax.

Whoever produces the article consumed, or wherever it is produced, the consumer pays, not the cost of producing it, but the whole market value of the article, including every tax upon it. The producer is, however, limited in his sales by the article he produces being highly taxed, whether at home or abroad, and his profits are also diminished by taxes, either at home or abroad, upon the article which he produces, as well as by the taxes upon every article which he consumes.

If the market value, of the home-produced article, be higher than the cost of a similar article, produced and imported from abroad, that difference of value arises from a restriction upon the admission, for consumption, of the cheaper article: either by actual prohibition, or by high duties forming practical prohibition, or by duties so high, that the foreign article can only be imported, and used, at prices equal to the amount, both of its natural market value, and also of the tax added, either for revenue, or to protect the article produced at home.

The difference between the natural price of an article imported from abroad, and the higher price of a similar article produced at home, is a tax imposed upon the whole community, with the view, for there can be no other, of putting the amount of that difference into the pocket of the producer of the home-made

article. It is also a far greater burden upon the nation, which is further taxed to the value of so much of the labour, production, trade, and navigation, which the *protective tax* restricts.

If taxation upon articles of consumption be indispensable to meet the claims upon the public revenue: *then*, if a quarter of wheat imported from Prussia, Odessa, or elsewhere, pay a duty of eight shillings, or four shillings, when entered for consumption in the United Kingdom: in like manner, every quarter of wheat produced at home ought, on sound principle, to pay a duty of eight shillings or four shillings: or, if 112 lbs. of sugar imported from Jamaica pay a duty of fourteen shillings when entered for consumption, there should be no distinction made to the consumer, when he pays a tax on the sugar he uses, whether it has been produced in Bengal, Brazil, Cuba, Jamaica, Java, or elsewhere: or, if a gallon of distilled spirits *produced*, and *consumed*, at home be taxed ten shillings, in that case a gallon of distilled spirits whether *imported* from France, Holland, the West Indies, or elsewhere, ought to pay no more, when *consumed* in the United Kingdom, than a tax of ten shillings.

But although this mode of taxing commodities must be admitted equitable, there will always exist in the United Kingdom, as great a feeling against, as great a resistance to, taxing articles produced at home, as there would be to levy the revenue by direct taxation. *In fact, an excise, from the necessarily inquisitorial nature of its character, will always be odious among a free people.*

It, therefore, remains to be considered how far we can advance, in simplifying, or reforming a system of finance, in order, at the same time, to raise the necessary revenue; and, to impose taxes according to the most equitable distribution, and consistently with the least possible inquisitorial, or oppressive, mode of collection.

FIRST, AS TO TAXES UPON COMMODITIES.

The following statements will illustrate the revenue collected by the two great departments of these taxes, the *excise* and *customs*.

Excise.—There is no disputing that the permanent establishment of this, at all times to the people of England, odious means of taxation, owes its foundation to the long parliament, which “*assembled, and sat, with the resolute purpose of never dissolving until all illegal taxation was abolished.*”

Odious, however, as the excise has ever been to the people of England, numerous articles were subjected to it, from the time when it was established by the long parliament, and afterwards under William III., and from that time it was increased under every sovereign, down to the late war, when we find the list of excise paying articles to include, before the close of the year 1800,—

Auction duty and licences; beer, bricks and tiles, candles, duty and licences; coffee, cocoa-nuts, coaches, duty and licences; cyder, perry, and verjuice, coffee dealers, chocolate dealers; dealers in all other excisable articles; gold and silver dealers, glass, hides and skins, hops, leather, malt, manufacturers of all excisable articles, metheglin or mead, old malt, mum, cyder and perry duties continued;

paper, parchment, printed calico, and all printed woven goods; salt, soap, shawls British, Irish, and foreign snuff, starch, sweets, or home-made wines, tea, tobacco vellum, wine, wire.

These forty-two heads of excise duties yielded, in 1802, a gross revenue:

In England, of	£15,517,290
„ Scotland	1,034,595
	<hr/>
	16,551,885
Expenses of collection	2,833,226
	<hr/>
Net revenue	£13,718,659

Ireland had then its separate revenue and income.

Great reductions have been made in the number of excisable duties since 1820, viz.;

In 1821, the excise yielded a gross revenue of 27,399,902*l*.

But this included the revenue upon the following articles transferred, reduced, or repealed, viz.;

Date.	ARTICLES.	Date.	ARTICLES.
1823.....	Cocoa and cocoa-nuts.	1832.....	Candles, ditto.
„.....	Pepper.	1833.....	Tiles, ditto.
„.....	Foreign spirits	1834.....	Starch, ditto.
„.....	Wine.	„.....	Stone bottles, ditto
„.....	Salt, repealed.	„.....	Sweets, mead, and home-made wines, ditto
„.....	Coaches transferred to stamps and taxes.	„.....	Tea, transferred to the customs.
1826.....	Wire, repealed.	1835.....	Glass, reduced.
1828.....	Cyder and perry, ditto.	1836.....	Paper ditto.
„.....	Hides and skins, ditto.	„.....	Soap, ditto.
1831.....	Printed goods, ditto.		

One of the great causes of grievance under the excise, is the necessary surveys or visits of the excise-officers, which, according to the report of the commission on excise management, subjected in 1835 to surveys or visits 587,917 establishments. The principal of which were:—

TRADES.	Number.	TRADES.	Number.
Brewers.....	42,715	Tea-dealers.....	164,974
Malsters.....	11,254	Brandy-dealers and retailers.....	81,114
Brickmakers.....	5,334	Beer-dealers and retailers.....	36,560
Tallowmakers—not for revenue, but as a		Wine-dealers.....	26,034
check upon soap-boilers.....	2,025	Glass-manufacturers.....	515
Soapmakers.....	172	Papermakers and stainers.....	715

Besides numerous others: as pyroligneous acid makers, rectifiers, glass pinchers, white-lead makers, snuff-mills, card-makers, University printers, corn-mills, and kilns (Ireland).

Since 1835, surveys on several of the above trades have been taken off. Those relieved from the excise surveys on tea, wine, beer, vinegar, starch, sweets, and home-made wine, and stone bottles, amounted to 262,191 persons. Licences to these were found to cost those in surveys, above 1*l*. each person, and the expense of surveys abstracted 72½ per cent from the amount of the licence-duty, the net produce was only 37½ per cent of the 401,004*l*. paid by the dealers.

The gross duty on vinegar was only 22,000*l*.; to obtain this trifling amount 72,970 persons were subjected to a survey of their premises.

The excise laws have been revised and very greatly simplified: and the present

management of the department is intrusted to persons, who administer its duties with every leniency, consistent with the necessity of preventing fraud.

In 1832, the gross revenue levied by the excise amounted to 18,266,071*l.*, but this included tea, 5,509,820*l.* Tiles, starch, stone bottles, sweets, mead, and home-made wines, &c., abolished; and soap, paper, and glass, on which the duties were reduced to about one-half.

The produce of the excise has apparently decreased, but not, if the duties repealed, and those transferred to the customs and stamps are added to the account

PRODUCE of Excise Duties in the Year 1844.

In 1845 Sir Robert Peel abolished the auction duty, and the obnoxious duty on glass, amounting together to 953,013*l.*

Now, in order to render the excise as little oppressive—as free from inquisitorial interference with labour, manufactures, and trade, we consider that, whenever the revenue can be levied equitably, and less oppressively, from any other source, we should abolish all the remaining excise taxes: excepting the duties on distilled spirits, malt, and licences; and, the collection of the two first of these might be transferred to one *new and efficient revenue department*, to replace those of the existing customs, and excise, and which would collect the taxes on commodities. The third licences might be transferred to the stamps and taxes.

We would therefore abolish, 1. The duty on bricks, as bearing oppressively hard upon a laborious occupation, which affords, and would afford, much greater employment to the people; thereby giving employment to bricklayers, carpenters, glaziers, joiners, upholsterers, &c., &c., thereby diminishing poor-rates.

2. The hop duty is partially repealed; an excise duty upon wheat or apples would be as reasonable as upon hops. It imposes a tax upon particular productions which can only be cultivated in certain parts of England; and the poor-rates in Kent are much higher than in any other county.

3. Paper duties are also an obnoxious and unequal tax.

3. The post-horse duty is a tax upon intercourse, and highly objectionable.

4. The soap duties are absolutely a nuisance.

5. The game certificates are ridiculous as a revenue tax.

6. But with every exception that can be urged against the excise, we cannot dispense with its revenue, except by bold, equal, and just legislation in regard to other sources of taxation

* A —The limits of this class have been so far extended as to include some articles which, though not strictly in a raw state, have undergone only a slight degree of preparation.
† D — Into this class have been thrown, not only those articles which contribute immediately to human subsistence, but also some which are used chiefly or entirely as the food of cattle; and others, such as spices, wine, and tobacco, which properly belong to the class of condiments or stimulants.

For a specification of the Receipt of respective Articles, see the following pages.

II.—REVISION OF THE CUSTOMS DUTIES.

With the exception of the duties and prohibitions imposed for protecting various interests, the duties increased since 1787, were augmented with the idea of adding the same proportion to the income then yielded, as to the duty increased. The fact of high duties either causing a diminution of consumption, or an increase of smuggling, seems to have been utterly unknown to the generations which had arisen in the Exchequer, and the House of Commons, during the reign of George the Third, and until the duties and prohibitions were grappled with after the year 1819, by Mr. Huskisson and others. The revisions made in the tariff of 1825, by Mr. Huskisson, 1831 and 1832 by Lord Althorp, and in 1833 and afterwards by Lord Sydenham, then Mr. Poulett Thomson (although those statesmen went as far as parliament would allow them, the ministers having been actually outvoted in an attempt to revise the timber duties), still left the customs duties and corn laws on a scale highly injurious to the nation. The reductions and abolitions of customs duties carried into effect by Sir Robert Peel in 1842 and 1845 formed the greatest reform made in the customs duties since 1787; but the defects even of the existing reformed tariff of customs duties are palpable. The scale of corn duties were not defended as revenue duties, but as a scale of protection to the British agriculturist. The scale could not be protective, without raising the price of bread to the consumer. If it did not intend this it meant nothing. If it did not intend to allow corn to be imported from foreign countries to be sold at *natural prices*—that is unrestricted competition prices—the scale was a fallacy. If it intended to be a scale of revenue duties, the duties should have been fixed, and not variable duties, veering with the weather, and with the season. But we are bound in justice to the minister, to say his difficulties were great, and that his moderate reduction of corn duties, aroused the great body of landlords into opposition against him.

The sugar duties are highly fallacious, both in regard to supply and revenue. There can be no equitable pretence for taxing sugar, or any other commodity except for revenue. In eight months there has been a decrease of about one 1,000,000*l.* of revenue, occasioned by the recent alteration of the sugar duties. A duty of 18*s.* 8*d.*, or 2*d.* per lb. on all sugars, without reference to production or origin, would have yielded an increase in the year of about 1,000,000*l.*: difference of revenue about 2,000,000*l.*

Nor can the rates of timber duties be equitably defended. There has been a loss of 600,000*l.* occasioned by reducing the colonial timber duties to 1*s.* per load. If this duty had been reduced only to 5*s.* there would have been no loss of revenue; although the duty on foreign timber was reduced from 55*s.* to 25*s.* per load.

A STATEMENT of the Amount of Customs Duty received on the undermentioned Articles during the following Years.

* Exclusive of tea sold by the East India Company prior to the 22nd of April, 1841, the duty on which was paid to the Exchequer.

† Including copper at reduced duties.

Since the reductions in 1847 the duties on all the articles marked (a) have been abolished, as well as the greater number, about 500, of those classed 35 as "Other articles" (c). On those marked (b) the duties have been reduced. The duties on animals, bacon, beef, pork, and hams, and most of the articles marked (c) will be completely abolished; the duties on corn, grain, flour, meal, rice, reduced to low nominal duties, and the duties on butter, cheese, tallow, rice, silk manufactures, &c., will be greatly reduced by Sir Robert Peel's great free trade measure for 1846.

If we examine the foregoing table we find that, with the exception of timber, metals, tallow, articles of food, which may all be considered as raw materials, and silk and gloves, which are manufactures, the revenue derived from all, with the exception of the first eight articles, is scarcely worth the expense of collection.

The total revenues of customs, deducting articles of food, amounted in 1844. to 22,041,418*l*. Deducting the revenue from articles upon which the duties have been abolished (about 1,400,000*l*.), there remains 20,641,418*l*. Of this amount the eight articles first enumerated in the table yielded 19,520,326*l*., leaving a balance only for all other duties (except food), not abolished, of only 1,121,092*l*., and of this balance timber alone, at the reduced duties, yielded 916,606*l*. Nett balance of duties which we would propose to repeal (exclusive of timber) 204,486*l*.

If we therefore proceeded to tax commodities only upon the sound principle that, if an article should be taxed, the duty should be levied without any reference to its origin, let us examine the result as to the extent of oppression, and the inquisitorial mode of imposing and collecting the taxes.

Taking the revenue from customs and excise, for 1844, deducting the duties abolished, and corn, which it has been contended ought not to be considered an article taxed for revenue :

Customs	£21,341,743
Excise, deducting sums which we would propose transferring to stamps and taxes	12,460,062
Total	33,801,805

Now, upon the principle of taxing no article with reference to its origin—if we abolish all the articles included in the excise, with the exception of malt and distilled spirits; and all duties of customs, except the first eight in the table, we attain this object, and we render the excise infinitely less inquisitorial, and oppressive than it has ever been, since its establishment by the Long Parliament.

These abolitions accomplished, the next consideration is the amount of revenue to be received, taking the year 1844 as the basis of calculation, viz. :

The first eight articles under the customs	£19,520,326
Malt and distilled spirit	10,003,752
	29,524,078
Loss of revenue, supposing no increase of consumption	4,277,727
Total	33,801,805

The year 1844, however, yielded from malt and distilled spirits less than the average revenue, which has amounted and may be safely calculated upon to yield hereafter, say	£ 10,000,000
If we allowed the consumption of the eight articles of customs first enumerated to increase, even in a much less proportion than the increase of population since 1835, and look at the revenue derived from those articles at that period, and especially if we equalise the duties on sugar without reference to its origin, we consider it perfectly safe to estimate the revenues from the first-named commodities at	21,500,000
Total taxes on commodities	31,500,000

The collection of these taxes might be placed with great saving, which would at least add half a million to the revenue, under one revenue department efficiently and intelligently organised.

REVISION OF THE DIRECT TAXATION.

The next class of taxes are the direct taxes, with which we may include the income tax, viz.,

Assessed taxes	£4,385,067
Income tax	4,989,800
Total direct taxes	9,374,867

The most convenient adjustment of the present assessed taxes, would be to abolish them altogether, and substitute a direct tax upon the profits of all realised property. A revenue of from 10,000,000 to 12,000,000 might be raised by this simple and just method of direct taxation; and we are confident, from what we have observed in France, Austria, Prussia, and some other states, that its collection would in a short period be found less grievous to the inhabitants of Great Britain, than the existing vexatious and inquisitorial assessed taxes. But we are not blind to the parliamentary obstacles opposed to such an equitable tax, in substitution of the existing assessed and income taxes, and to provide for other taxes, which we propose to abolish.

One obstacle to our plan is the Land Tax Redemption Act of 1789—certainly the greatest financial blunder ever committed by a British statesman. The rottenness of one measure, of expediency, will ever be found to give birth to some other, unsound, expedient, to palliate for the time, what is only curable by a bold and sound remedy. Temporary expediencies, without any certain provision for future exigencies, occasioned the financial difficulties that called forth the Bank Restriction Act. The embarrassments in which this act involved the then Chancellor of the Exchequer, made him seize upon the most available expedient: *that* was to offer up for sale the fixed revenues of Great Britain. The history of this measure, as far as it has been carried into effect, may be usefully instructive, in showing how little advantage has been gained to the treasury, not only in proportion to the amount of revenue lost, but as regards the obstacle which

the Land Tax Redemption Act has formed to a sound adjustment of the taxation of Great Britain. Had the land tax been completely, instead of partially redeemed, this difficulty in the way of financial legislation would have been greatly diminished; but as it is, it has formed a plea for not imposing any further tax upon land. But to this we are honestly bound to demur.

Another difficulty opposed to an equitable adjustment of the assessed taxes is, the circumstance of there being no such taxes levied in Ireland. The justice, again, of this *exemption in one, and of liability in the other two, of the three united kingdoms*, would be a task requiring powers of more than ordinary ability to defend. The justice of the exemption we deny. Taking the assessed taxes of Great Britain as we now find them, and considering them not only to be inquisitorial, and grievous, in the collection, but exceedingly injurious in their operation, being detrimental to industry, and to the employment of artisans, and the labouring classes, we consider the following revision as the most equitable, which may be adopted with the least objection in practice, and with the greatest safety to the exchequer.

The nett amount of land, and other assessed taxes, for 1844, was	£1,585,067
The nett amount of unredeemed land tax	1,199,148
	<hr/>
Nett amount of assessed taxes, exclusive of land taxes	£3,245,919

All the assessed taxes we propose to abolish, except the unredeemed land tax, and for the following reasons:

First.—THE WINDOW TAX, which yielded for the year 1843 . . . £1,545,281

Reasons for Abolition.—Being inquisitorial and vexatious in the assessment and collection; injurious to the health of the population; being objectionable as regards architecture, cleanliness, and restricting the employment in glass manufactures, of joiners who make window-frames, of glaziers and painters; and being a tax unequal in its assessment, as large houses do not require the same number of windows, in proportion to rents, as small and middle-sized houses. In the latter respect, the window-tax is particularly injurious.

Second.—SERVANTS, yielding revenue in 1843 . . . £200,251

Reasons.—Being a tax which limits the giving employment to servants, and by their not being employed, the occupation of others is limited, as cloth manufacturers, tailors, hatters, shoemakers, &c., for their clothing, &c. Every limitation of employment, whether of servants or others, limits industry, and increases the poor-rates.

Third.—CARRIAGES, in 1843 . . . £428,903

Reasons.—This tax is grievous, as it limits to a most injurious extent the employment of artisans and workmen, the great proportion of the value of carriages of whatever description, and their appurtenances, being the labour and skill of coach-builders, coach-spring makers, coach-smiths, curriers,

cloth-manufacturers, coach-painters and glaziers, harness-makers, and saddlers, &c. The employment of carriages creates also employment for coachmen, servants, and horses, &c., &c.

Fourth.—Horses for riding, &c., and other horses and mules . . . £376,001

Reasons.—By the assessed taxes restricting the employment of horses for riding, and other horses and mules, &c., it is easy to prove that this tax does, to an immense amount, limit employment; *exercise* for health and recreation is also greatly restricted by its expense. It is especially grievous as a tax on horses by the day. Countless thousands, who cannot afford to keep horses, on account of the expense of feeding and taking care of them, would hire horses frequently by the hour or day, were it not for the high duty on each time a horse is let. It is also injurious to curriers, saddlers, harness-makers, horse-cloth makers, blacksmiths, stable-keepers, sellers of fodder and oats, grooms, &c.

Horse-dealers £10,860

Reasons.—Tax unjust. Why not tax other dealers?

Dogs £151,857

Reasons.—Chiefly that of abolishing the assessed taxes, and as the substitution to be proposed will justify the abolition of this tax. It is also inquisitorial, and an often evaded tax.

Hair Powder £ 4,212

Armorial Bearings 67,137

Reasons.—The same as those for abolishing the dog-tax.

Game Duties £127,130

Reasons.—The same as those for abolishing the taxes on dogs.

Now the amount of the direct taxes, exclusive of the income-tax, proposed to be abolished, is about 3,225,000*l*.

We believe if all the grievances and inconveniences of the assessed taxes, which we propose to abolish, and the convenience, in collection, of the taxes we propose to substitute, and the far less inquisitorial nature of rating the rents, or profits, of realised property, were but clearly understood by Members of Parliament and their constituents, that this great financial reform, which may appear, to little men, a bold measure, would be carried in the House of Commons without a division. In order to extend the direct tax upon property, we should, in equity, extend it to Ireland; and we could show that the people of Ireland would neither be treated, unjustly by such taxation upon the rents, and profits, of realised property, but that it would even be made beneficial to the improvement of that country, and to the condition of the inhabitants.

STAMP DUTIES.—This tax yields the treasury,

From Great Britain, about	£ 6,750,000
From Ireland, about	453,487
Total	<u>7,203,487</u>

The delay and restriction imposed by stamps upon trade and commerce, would justify the abolition of this tax altogether, but its amount is too important, in the existing financial condition of the United Kingdom, to permit such a measure of convenience, as well as relief, to the population. In some respects, it cannot be highly objectionable; deeds and other acts and documents of great importance, owing much of their security against fraud and forgery to the stamp, may reasonably be made to bear an expense for this security.

But knowing that the stamp-duty acts oppressively in many respects, we cannot pass it over without proposing some alterations.

The stamp-duty upon fire insurances is, annually, about double the amount charged for insuring property; this high duty, not only greatly prevents the insuring of property, but property, not insured, is frequently exposed to danger, by the firemen with their engines not exerting themselves to extinguish uninsured property, as they are directed by the companies who pay them, to take care, in the first place, to preserve the property insured.

On marine insurances, the stamp-duty is so heavy and pernicious, that a great part of the insurances which would otherwise be effected in England, are made at Antwerp, Rotterdam, Amsterdam, and Hamburg.

The stamps, therefore, on fire and marine insurances, now yielding about a million and a quarter, should be abolished.

Licensing stage-carriages and hackney-coaches appears a duty which ought to be abolished; it produces something above half a million for Great Britain.

Ireland is exempt from this duty on hackney-coaches and stage-carriages. The licence-duty on them in England is, however, not severely felt, nor very restrictive upon occupation; while it forms, to some extent, a guarantee for the faithful performance of the obligations of the proprietors of carriages and their servants.

The probate and legacy-duty yields about two millions sterling annually, for Great Britain; and for Ireland, only 66,032*l*.

It is a duty that may be evaded, by giving, during life, that which is bequeathed by the giver, only after his death, to the person who is to receive the legacy. The mistrust of the possessor, however, or the power that it gives him, while in life, does not often allow him to surrender his property until he is in a state unable any longer to meddle with it. So that while men continue to possess wealth, the treasury will receive a considerable revenue from the stamp-duty

on probates, and legacies. But we cannot defend the principle of making personal estate liable to, and exempting real estate from, this duty. This requires an equitable adjustment.

The duties on hawkers' and pedlars' licences, are grievous impositions upon itinerant dealers; nor do we believe that those licences are of any advantage in preventing fraud.

The stamp-duty on gold and silver plate is less objectionable than many others. It is, however, considered inquisitorial, and may not be a security as to the purity of the metals, for the stamp may very easily be forged. It yields about 100,000*l.*, of which about 2000*l.* only is paid in Ireland.

Taking, therefore, into consideration the exigencies of the treasury, we cannot well propose any diminution or abolition of the stamp duties, except upon,

Fire and marine insurances, which would leave an annual revenue from stamps of at least 1,200,000*l.*

All the stamp-duties, however, require an equitable adjustment.

THE POST-OFFICE.

We have, long before the time of the late reform in the post-office charges, been of opinion that, as the government should never possess a monopoly of trade, the post-office charges should be regulated, not with a view to revenue, but to the purposes of covering all the expenses, required to convey letters, and intelligence with security, and with rapidity.

The tax imposed upon the public, by the late post-office reform, is so very moderate, that while it still yields a considerable revenue, which we believe confidently will increase, no one can desire any alteration in the rate of postage.

Many of the recent arrangements of the government for conveying the mails have been so extremely beneficial, that great credit is due to the late and present administration. There are, however, many additional places, to which we would recommend morning mails to be despatched. This would be beneficial, and would be no expense to the post-office. The line of steam-packets established by the government contract with Mr. Cunard, for carrying the mails twice a month across the Atlantic, between Liverpool, Halifax, and Boston, has not only already more than repaid the outlay made by the government, but leaves every prospect of an increasing surplus of revenue. This fiscal consideration would be effectually secured, if such powerful steam-boats as those of the Liverpool, Halifax, and Boston line were to be de-patched from Liverpool once a week during the eight spring, summer, and autumnal months, and once a fortnight during the months of November, December, January, and February.

The post-office would not only gain in revenue from this arrangement, but this frequent intercourse would form a great and rapid line of communication

between the whole of Europe and all North America, including all the countries from the Gulf of Mexico to Lake Superior. It would, in practical effect, be connecting Europe and America in common interests, by convenient, rapid communication, forming, in truth, a great broadway of intelligence and civilisation, and, with freedom of trade, the best means of increasing the commerce and prosperity reciprocally of, and maintaining peace and good faith between, the countries most interested. Under the old packet system, between Falmouth and Halifax, by the gun-brigs, exclusive of the deplorable loss by foundering of nearly all those dangerous vessels, with all their crews and passengers, the expense to government was about 40,000*l.* annually more than the receipts of postage. By the recent line of steam-ships, a balance will, we believe, at the end of one year after the first packet steam-ship sailed from Liverpool, appear to the credit side of the Atlantic mails.

Many other arrangements for carrying the mails by steam have been made by the treasury and admiralty. Traversing the world from England to the Gulf of Mexico, and then overland, to meet other steam-ships on the west of the Isthmus of Panama, to communicate over the Pacific to New Zealand and New Holland, —meeting other lines communicating with India, the Red Sea; and by crossing over the Isthmus of Suez, meeting the British mail steam-packets for England at Alexandria, we believe to be far from an impracticable delusion. The practicable, and not unprofitable, establishment of all this is not far distant; especially when we all know, how very lately the practicability of running steam-ships across the Atlantic was questioned, doubted, and denied. The recent contracts for multiplying the steam communication with India, and by a branch line from Ceylon to China, will be found of immense advantage. The steam communication recently extended to the Levant, is also important.

There is another great consideration, one of economy, too, in the end, in regard to large, strongly built, and powerful steam-ships—that is the readiness with which mail steam-ships of great strength and power may be turned into steam-ships of war; and that they may be *de facto* considered as such on the North American, West Indian, and Mediterranean lines. Now, if this mail steam-marine were to belong to foreign countries, British capital no doubt would, we believe, be that chiefly invested in them; yet in the event of war, they would not only, not be available to England, but they would in all the likelihood of probabilities, be turned against us. This, in the change which steam power must create in naval tactics, is a most serious consideration for the British government, and for the British public.

We would, therefore, recommend that any surplus revenue from the post-office should be applied to increasing the number of mail steam-ships.

PROPERTY AND INCOME TAXES.

These never have been, nor are they likely to be, taxes agreeable to the people:—especially the tax upon incomes not derived from realised property, that is, the tax on trades and professions. But when we have, from ordinary sources, a deficient revenue, we are bound to resort to extraordinary means, and we shall always do so, in order to maintain the national honour, credit, and dignity.

If a house tax, alone, would meet the deficient expenditure, after the abolition of the unsound, and inquisitorial, taxes we have enumerated under the heads of excise, customs, taxes, and stamps, we would prefer, infinitely, to discountenance rather than to have any recourse to, an income and property tax. But it is clear that the demand upon the treasury, to meet the expenditure, will not, for some years, permit the abandonment of the property tax. The next consideration is, can we render it more equitable, and less inquisitorial? We are convinced that this can be effected.

THE Income Tax collected in the Year ending the 5th of April, 1843.

	Income.	Tax.
	£	£
ENGLAND AND WALES		
Schedule A, lands, tenements, &c., in respect of the property thereof.....	13,725,479	2,150,414
Schedule B, lands, &c., in respect of the occupancy thereof.....	29,199,946	2,875,663
Schedule C, annuities, dividends, &c.....	77,571,091	812,983
Schedule D, profits of trade.....	52,290,643	1,496,985
Schedule E, public officers, &c.....	8,930,881	24,057
Total.....	181,717,999	4,559,102
SCOTLAND.		
Schedule A.....	9,781,383	751,221
Produce of tax in Scotland on all the schedules.....		751,221

9,281,383*l.* at 7*d.* in the pound, should produce 270,794*l.*, leaving for the remaining four schedules 123,530*l.* = 394,324*l.*, which sum, collected at the same rate as those four schedules produced in England, indicates an income of 4,650,959*l.*, showing the total income of Scotland to be 13,965,342*l.*, and of Great Britain 195,287,544*l.*, exclusive of incomes under 150*l.*

In 1801, the assessments for England, including incomes above 150 <i>l.</i> amounted to.....	71,626,894
.. The income from assessments under 150 <i>l.</i> per annum, and not under 60 <i>l.</i> amounted to.....	18,105,240
Difference being incomes above 150 <i>l.</i> per annum.....	53,521,654

Now, if 56,571,654*l.* : 18,105,240*l.* :: 195,287,544*l.* : 62,499,831*l.*, and if the incomes under 150*l.*, and above 60*l.*, from all the schedules be, in 1845, in the same proportion to those above 150*l.* as in 1801 (and there is no reason that they should not), then the total income of Great Britain, in 1845, should amount to 257,787,375*l.* We consider that of this amount 200,000,000*l.* may be estimated as the rents and profits of all realised property, viz., the rents and profits of all lands, tenements, houses, constructions, funds, stocks, and shares: including factories, warehouses, docks, shipyards, railways, canals, public funds, Bank of England stock,

East India and South Sea stock, and the stock and shares of all companies whose stocks and shares are bought and sold in the market.

PRO FORMA FINANCIAL SCHEME.

Having analysed the present system of taxation, we would propose the following simplification of the taxes upon the more sound principles which we consider practicable.

PRO FORMA VIEW of equalising the ANNUAL REVENUE and EXPENDITURE presuming that the Excise and Assessed Taxes, and the Stamps on Marine and Fire Assurances, and also the Duties of Customs (except on eight articles) should be abolished, and adding Distilled Spirits and Malt, now under the Excise, to the Customs, and Excise Licences to the Stamps : abolishing all other of the Assessed Taxes, and the whole Excise Establishment.

	£
<i>First.</i> Assuming the total annual expenditure not to exceed	50,000,000
Revenue, necessary to meet this expenditure, to be raised as follows :—	
I. From <i>uniform</i> duties on (1) Tea ; (2) Sugar and Molasses ; (3) Coffee and Cocoa ; (4) Tobacco ; (5) Distilled Spirits ; (6) Wines ; (7) Dried Fruits ; (8) Spices	£21,500,000
II. Home Distilled Spirits	£5,000,000
Malt, whether made at home, } 5,000,000 } 10,000,000	
or imported from abroad	
III. Stamps, leaving out Marine and Fire Assurances, and including Licences now under the Excise	7,500,000
IV. Unredeemed Land Tax	1,200,000
Deficit to be provided for during the first year	9,800,000
	<hr/>
	£50,000,000

This deficit to be levied, not by doubling, or rather more than doubling, the present income tax, but by the less inquisitorial and more direct and equitable plan of an annual assessment, in the pound, upon the annual value of all realised property. And surely 11,000,000*l.*, including the unredeemed land tax, out of 50,000,000*l.* of total taxation, forms but a small proportion of the total sum to be levied directly. But if we may form an estimate, founded on the experience of the past, the ordinary sources of revenue would annually increase ; and the amount of direct taxation would be proportionably diminished, at least so long as peace shall continue. Finally, the direct taxation necessary would, we believe, not embrace more than the unredeemed land tax and a house tax, equal to the present window and other assessed taxes proposed to be abolished.

We could also show that the customs, including the security and collection of the duties on malt and spirits, now under the excise, might be conducted at less expense than at present ; and that, at all events, an amount of expense equal to that of the whole present excise establishment might be saved to the country.

We could also equitably modify the stamp duties, so as to produce a much greater revenue. The interest on exchequer-bills might also be saved, as in

Prussia, by the exchequer-bill office issuing paper, not bearing interest, but being at all times a legal tender, as much so as Bank of England notes are now.

In our *pro formá* view of fiscal reform, we have stated the deficit to be provided for during the first year at 9,800,000*l.*, or nearly five per cent on the annual rents and profits of all realised property. As we object to the present assessed taxes, and especially to the window tax, which ought to have been repealed simultaneously with the excise upon glass, we do not see how we can diminish the amount of our proposed property tax: except,

1. By substituting an additional tax on houses, in lieu of the *window tax*. But this substitution, though very far less objectionable than the window tax, would, if we are to have a property tax at all, be, however, a tax on houses greater than on other property.

2. By continuing other, though objectionable, duties. Timber is a raw material which, next to the essential food of man, ought to be admitted free from duty. But if the wisdom of Parliament will continue the timber duties, why not adjust these duties upon pure fiscal principles? The duties on foreign and colonial timber have yielded a revenue of 1,691,329*l.* In 1844, by reducing the duties on colonial timber to 1*s.* per load, which scarcely pays the expense of collection, the revenue from timber of all kinds, including deals, amounted to less than 1,000,000*l.* If we should persevere in continuing the timber duties, we should modify them to about the following proportions, viz.: a duty of 5*s.* per load on white pine timber from the colonies, and of 15*s.* upon the more valuable fir timber of the north of Europe; and upon deals, &c., in proportion. We take these two duties fiscally, but not on any other principle. By these low scales, with a proportionate higher duty on deals as a semi-manufactured article, we might levy one million annually of revenue from timber. Exclusive of revenue from corn, the duty on other articles yielding any revenue, and that are not to be abolished, are from copper ore, about 65,000*l.*, from tallow about 175,000*l.* Neither of the duties for revenue from these should be continued. The revenues from duties on corn, butter, and cheese, should all be abolished.

Therefore, we might save and realise, an additional revenue, as follows, viz.:

	£
1. <i>Save.</i> Interest on exchequer-bills due	500,000
2. <i>Realise.</i> From timber	1,000,000
From equalisation of sugar duties, a further sum of	1,000,000
	<hr/>
	£2,500,000

This modification of our fixed scheme would reduce the property tax from 9,800,000*l.* to somewhat under 7,000,000*l.*, or to scarcely three-and-a-half per cent on all realised property without distinction.

The following table exhibits how our exports have increased to those countries upon the products and manufactures of which we have removed prohibitions, equalised differential duties, and reduced other duties. This appears especially with reference to our exports to France, the government of which has made no

relaxation in favour of British produce or manufactures; while the British government have equalised the duties on French and other foreign wines, and reduced the duties on French silks, bronzes, clocks, watches, and all works of Parisian industry.

An Account of the declared Value of British and Irish Produce and Manufactures exported from the United Kingdom, specifying the various Countries to which the same were exported, in each Year from 1830 to 1844.

CONCLUSION.

The foregoing proposed reforms in the financial legislation of the United Kingdom are bold. Yet, we consider them not only equitable but practicable. The tendency of public opinion is, yearly, increasing in their favour; and, considering the financial reforms made during the last few years, it will be impossible to impede the progress of equitably reforming our financial and commercial legislation.

In accordance, therefore, with the principles which we have laid down, that country which possesses average advantages from nature, and whose population possesses the greatest industry, ingenuity, and intelligence, will, if unfettered from legislative restriction upon labour, industry, agriculture, manufactures, navigation, and trade, become, in proportion to its extent, resources, and advantages, the most flourishing country in the world; or, at least as prosperous as any other country, with equal natural, and moral advantages, and legislating upon equally liberal principles.

We believe that the United Kingdom possesses all the requisite advantages to become that, more happy country, which nothing but false legislation prevents; viz., *far more independent, prosperous, and far more rich and powerful; and, with the whole population far less poor, far better employed, more fairly paid for their labour, better sheltered, clad, and fed, and more independent than that, at the present time, of any other country in the world.*

The agriculture, the manufactures, the shipping, the foreign and colonial trade, and the power of the United Kingdom might, in their present stage, be viewed as only in their infancy, instead of being considered as having, before now, attained manhood, if those sound principles of fiscal, and commercial legislation, which we have attempted to elucidate, but which are not new, were boldly taken up, in order to be carried by the Imperial Parliament.

II. COMMERCIAL LEGISLATURE OF AMERICA.

If England has made great advances, towards an equitable, and liberal system of commercial legislation, the Free and United States of America have actually retrograded from a system fiscally, and commercially, unsound in its origin, into the most wretched, and unenlightened schemes of customs duties: framed on the fallacious basis of protecting manufactures.

The numerous customs tariffs of the United States, would be discreditable to the most ignorant, and barbarous government; and, when we consider the intelligence of the citizens, and the condition of the country, when Congress first passed laws to impose duties on the importation of foreign commodities, we can only account for the blunders committed, by an hereditary attachment to the bad example of the mother country.

If any country was ever placed, by favourable circumstances, to legislate wisely, on sound commercial, and fiscal principles, that country was, and is, the United States of America.

In comparing the constitution, agreed to by this great republic, with that of the governments of other nations, we must remember, that when the Anglo-American colonies declared their independence, their moral and physical condition was very different from that of all republics, that had previously existed. The people were generally intelligent, and thoughtful; their habits frugal and

industrious; and, unlike the Europeans of South America, their ideas were free from religious intolerance, and from the thralldom, of ecclesiastical tyranny.

The abilities of the men, who directed their councils, were more solid than brilliant; practical rather than experimental. They adopted the constitution and laws of the then most free government in the world, as the groundwork of theirs; making a royal hereditary chief magistrate, a titled privileged nobility, and a national church establishment, the chief exceptions.

The vast regions of their territory comprehended soils yielding every production under heaven. They were watered by numerous navigable rivers, and streams; they abounded in useful woods and minerals. The sea-coast was indented with harbours; and the shores, rivers, and seas afforded plentiful fisheries. All these secured to them every natural advantage.

Their language and education enabled the people to enjoy all the benefits of English knowledge and literature, without the labour or expense of translation, or paying for copyrights. They had also the earliest advantage of discoveries in the arts and sciences, without the cost of purchasing the rights of patents.

With the good fortune, also, of being governed, at that solemn period of their history, by honest men, they had the experience of all ages and countries to aid their judgment.

Possessing, therefore, such extraordinary advantages, the Anglo-Americans were placed in a condition to avoid the blunders committed by nations, the governments and laws of which, growing up from their birth in the feudal ages, during centuries of bigotry, intolerance, tyranny, and ignorance, down to periods of liberality and intelligence, were consequently incompatible with equal justice, personal liberty, and sound principles.

But with all these lights and advantages to guide them, and having a free course before them, erroneous views of commercial legislation arose out of the very principles of independence, which they declared. Men of moderate ambition and frugal habits, like Washington and many others, entertained, with no doubt pure intentions, the idea, that in order to be perfectly independent, they must produce at home, every thing required for food, raiment, shelter, convenience, and luxury. This fallacious principle has hitherto prevailed, but we believe cannot be very long continued.

"As early as August 14th, 1774, a convention was held in Virginia, and resolutions were passed, signed by George Washington, Thomas Jefferson, and other statesmen, as follows:

"We do hereby resolve and declare that we will not, either directly or indirectly, import from Great Britain any goods, wares, or merchandises, nor any of her manufactures. We will turn our attention from the cultivation of tobacco to the cultivation of such articles as may form a basis for domestic manufactures, which we will endeavour to encourage throughout this colony to the utmost of our abilities."

This declaration, it must be remembered, was directed against England in order to diminish her manufactures and trade, and consequently her means of

coercing the colonies, far more, than for protection to home manufactures. For there was no prohibition of goods from Saxony, France, or other countries, which could send manufactures to America.

It is also a remarkable fact, that when a virtuous and, in other respects, a great man, like Washington, delivers a fallacious, and, at the same time, a specious opinion, such a blunder will be a thousand times more pernicious, than if pronounced by a profligate in power.

General Washington, in his message, in 1789, recommended to Congress the encouragement of manufactures, in the following words:—

“ Congress have repeatedly, and not without success, directed their attention to the encouragement of manufactures. The object is of too much consequence not to insure a continuance of their efforts, in every way that shall appear eligible. Ought our country to remain dependent on foreign supply, precarious because liable to be interrupted? If the necessary article should, in this mode, cost more in time of peace, will not the security and independence thence arising form an ample compensation?”

We do not, however, find Washington recommending high protecting duties or prohibition. We would argue the contrary from the following maxims, in his parting address, on retiring from public life.

“ *Observe good faith,*” says he, “*and justice towards all nations; cultivate peace and harmony with all. Religion and morality enjoin this conduct; and can it be that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and (at no distant period) a great nation, to give to mankind the magnanimous and more exalted example of a people always guided by an exalted justice and benevolence.*”

“ In the execution of such a plan, nothing is more essential than that *permanent, envenomed antipathies against particular nations, and passionate attachments for others,* should be excluded, and, that in the place of them, *just and amicable feelings towards all should be cultivated.*”

“ The great rule of conduct for us in regard to foreign nations, is *extending our commercial relations,* and to have with them *as little political connexion as possible.* So far as we have already formed engagements, let them be fulfilled with perfect good faith. Here let us stop.

“ It is our true policy to *steer clear of permanent alliances, with any portion of the foreign world;* so far, I mean, as we are now at liberty to do it; for let me not be understood as capable of patronising infidelity to existing engagements. I hold the maxim no less applicable to public than to private affairs, that honesty is the best policy. I repeat it, therefore, let those engagements be observed in their genuine sense. But, in my opinion, it is unnecessary, and would be unwise to extend them.

“ Harmony, and a liberal intercourse with all nations, are recommended by policy, humanity, and interest. But even our commercial policy should hold an equal and impartial hand; *neither seeking nor granting exclusive favours, or preferences; consulting the natural course of things; diffusing and diversifying, by gentle means, the streams of commerce, but forcing nothing;* establishing with the powers so disposed, in order to give trade a stable course, to define the rights of merchants, and to enable the government to support them, conventional rules of intercourse—the best that present circumstances and mutual opinion will permit; but temporary, and liable to be, from time to time, abandoned, or varied, as experience and circumstances shall dictate; *constantly keeping in view, that it is folly in one nation to look for disinterested favours from another; that it must pay with a portion of its independence for whatever it may accept under that character; that by such acceptance, it may place itself in the condition of having given equivalents for nominal favours, and yet of being reproached with ingratitude for not giving more.* There can be no greater error than to expect or

calculate upon real favours from nation to nation. It is an illusion which experience must cure, which a just pride ought to discard."

President Jackson, in his message as late as the 11th of December, 1838, on alluding to the prosperous trade of the country, and to the relations of America with foreign courts—observes

"This desirable state of things may be mainly ascribed to our *undeviating practice of the rule which has long guided our national policy,—to require no exclusive privileges and to grant none.*"

"Nor have we less reason to felicitate ourselves on the position of our political than of our commercial concerns. They remain in a state of prosperity and peace—the effect of a wise attention to the parting advice of the revered father of his country (Washington) on this subject, condensed into a maxim for the use of posterity by one of his most distinguished successors—*to cultivate free commerce and honest friendship with all nations, and to make entangling alliances with none.*"

The first act for raising a revenue by impost and protecting manufactures was passed July 4, 1789, and advocated by James Madison and others, headed—

"Whereas it is necessary for the support of the government, for the discharge of the debts of the United States, and *the encouragement and protection of manufactures*, that duties be laid on goods, wares, and merchandise imported."

Mr. Jefferson, who is generally called the father of democracy in America, says, in his message, December, 1802 :—

"To cultivate peace and maintain commerce and navigation in all their lawful enterprises, and *to protect the manufactures adapted to our circumstances, are the landmarks by which to guide ourselves in all our proceedings.*"

And, in a letter dated January 9, 1816, says :—

"We have experienced, what we did not before believe, that *there exists both profligacy and power enough to exclude us from the field of interchange with other nations; that to be independent for the comforts of life, we must fabricate them for ourselves.*" We must now place the manufacturer by the side of agriculturist. The grand inquiry now is, shall we make our own comforts or go without them at the will of a foreign power? He, therefore, who is against domestic manufactures, must be for reducing us either to a dependence on that nation, or be clothed in skins, and live like wild beasts in dens and caverns. I am proud to say I am not one of these. *Experience has taught me that manufactures are now as necessary to our independence as to our comfort; and if those who quote me as of a different opinion, will keep pace with me in purchasing nothing foreign*, when an equivalent of domestic fabric can be obtained, without regard to difference of price, it will not be our fault if we do not have a supply at home equal to our demand, and wrest that weapon of distress from the hand which has so long wantonly wielded it."

The specious and fallacious opinions of Messrs. Jefferson and Madison, and those afterwards of Mr. Alexander Hamilton prevailed. Yet Franklin and many others delivered sound maxims on commercial legislation.*

* Those who advocate restrictions on foreign trade, and those who are opposed to such restrictions, may, or at least ought to, derive instruction from the sound and clear opinions of Benjamin Franklin, the most practical statesman and financier ever born in the United States.

"If," he observes, "the importation of foreign luxuries could ruin a people, we should, probably, have been ruined long ago; for the British nation claimed a right and practised it, of importing among us, not only the superfluities of their own production, but those of every nation under heaven; we bought and consumed them, and yet we flourished and grew rich. At present our independent governments may do what we could not then do, discourage by heavy duties, or prevent by heavy prohibitions, such importations, and thereby grow richer; if indeed, which

The sound maxims of Franklin and others were unrespected: but we have little hesitation in saying, that the fallacious commercial system of the United States, would not have been maintained, were it not for the example, as well as the conduct, of England towards America, after the acknowledgment, by the former, of the independence of the latter.

If the governments of England and America had been wise, when, and after, the crown of England had acknowledged the independence of the United States, they might have established, between both countries, as valuable, and important a commercial system, based altogether upon liberal principles and mutual interests, instead of upon jealous prejudices—as could have been maintained, if the regions now forming the United States, and the people constituting the citizens, had continued, as provinces, and as subjects of the sovereign of England.

Under a liberal commercial system, Great Britain might have enjoyed every possible trading advantage with the United States, which could have been desirable, or at least just, to possess, if they had continued under British domination. All these peaceable, and profitable, advantages might, assuredly, have been

may admit of dispute, the desire of adorning ourselves with fine clothes, possessing fine furniture, with elegant houses, &c., is not, by strongly inciting to labour and industry, the occasion of producing a greater value than is consumed in the gratification of that desire.

"The agriculture and fisheries of the United States are the great sources of our increasing wealth. He that puts a seed into the earth is recompensed, perhaps, by receiving forty out of it, and he who draws a fish out of our water, draws up a piece of silver.

"Let us (and there is no doubt but we shall be attentive to these, and then the power of rivals, with all their restraining and prohibiting acts, cannot much hurt us. We are sons of the earth and seas, and like Antæus in the fable, if in wrestling with a Hercules we now and then receive a fall, the touch of our parents will communicate to us fresh strength and vigour to renew the contest.

"Several of the princes of Europe, having of late, from an opinion of advantage to arise by producing all commodities and manufactures within their own dominions, so as to diminish or render useless their importations, have endeavoured to entice workmen from other countries by high salaries, privileges, &c. Many persons pretending to be skilled in various great manufactures, imagining that America must be in want of them, and that the Congress would probably be disposed to imitate the princes above-mentioned, have proposed to go over on condition of having their passages paid, lands given, salaries appointed, exclusive privileges for terms of years, &c.

"Such persons, on reading the articles of confederation, will find that the Congress have no power committed to them, or money put into their hands, for such purposes; and that if any such encouragement is given, it must be by the government of some separate state. This, however, has rarely been done in America; and when it has been done, it has rarely succeeded so as to establish a manufacture, which the country was not yet so ripe for as to encourage private persons to set up; labour being generally too dear, and hands difficult to be kept together, every one desiring to be a master, and the cheapness of land inclining many to leave trade for agriculture. Some indeed have met with success, and are carried on to advantage; but they are generally such as required only a few hands, or wherein great part of the work is performed by machines. Goods that are bulky, and of so small a value as not well to bear the expense of freight, may often be made cheaper in the country than they can be imported; and the manufacture of such goods will be profitable wherever there is a sufficient demand.

"The farmers in America, indeed, produce a good deal of wool and flax, and none is exported—it is all worked up; but it is in the way of domestic manufacture, for the use of the family. The buying up quantities of wool and flax with the design to employ spinners, weavers, &c., and form great establishments, producing quantities of linen and woollen goods for sale, has been several times attempted in different provinces; but those projects have generally failed, goods of equal value being imported cheaper. And when the governments have been solicited to support such schemes by encouragements, in money, or by imposing duties on importation of such goods, it has been generally refused on this principle,—that if the country is ripe for the manufacture, it may

secured, without the unavoidable expense of governing, restricting, or overawing them.

The trade, and navigation, of the United States might have, in like manner, derived every commercial, and maritime, advantage that could have been, upon the most liberal understanding, obtained from the mother country, without being subjected to the, possible, incapacity of a colonial office; to the maladministration of colonial governors, to the interference of a British parliament, or to the obstinate exercise of the sovereign prerogative. We lament that there ever should have been causes to warrant separation; and we grieve that, when that separation was effected, the family relations between both countries were not established upon more just principles, and more kindly feelings. Unfortunately, wisdom did not pervade the councils of either England or America, upon the subject of international trade—during so favourable an opportunity, as the peace of 1783, for establishing the foundation of a commercial system, between England and America, which must have attained an unexampled magnitude:—a trade, and navigation, which would have formed durable bonds of friendship, and of peace,—which the reciprocal interests of the people of the one, and of the other, country, would render too powerful for any government to violate.

In justice to Mr. Pitt, we must absolve him from any share of illiberality in regard to such a commercial intercourse with the United States.

be carried on by private persons to advantage; and if not it is folly to think of forcing nature. Great establishments of manufacture require great numbers of poor to do the work for small wages; those poor are to be found in Europe, but will not be found in America till the lands are all taken up and cultivated, and the excess of people who cannot get land want employment.

"MAXIMS.—1. All food, or subsistence for mankind, arises from the earth or waters.

"2. Necessaries of life that are not food, and all other conveniences, have their value estimated in the proportion of food consumed while we are employed in procuring them.

"3. Fair commerce is where equal values are exchanged for equal, the expense of transport included. Thus if it cost A in England as much labour and charge to raise a bushel of wheat as it costs B in France to produce four gallons of wine, then are four gallons of wine the fair exchange for a bushel of wheat; A and B meeting at half distance with their commodities to make the exchange. The advantage of this fair commerce is, that each party increases the number of his enjoyments, having, instead of wheat alone, or wine alone, the use of both wheat and wine.

"OF AN OPEN TRADE.—Perhaps in general it would be better if government meddled no further with trade than to protect it, and let it take its course. Most of the statute or acts, edicts, or arrests, and placards of parliament, princes, and states, for regulating, directing, and restraining of trade, have, we think, been either political blunders or jobs obtained by artful men for private advantage under the pretence of public good. When Colbert assembled some of the wise old merchants of France, and desired their advice and opinion how he could best serve and promote commerce, their answer, after consultation, was in three words only—*Laissez vous faire*;—"Let us alone." It is said by a very solid writer of the same nation, that he is well advanced in the science of politics who knows the full force of that maxim, *Par trop gouverner*;—"not to govern too much," which perhaps, would be of more use when applied to trade than in any other public concern. It were therefore to be wished that commerce were free between all the nations of the world as it is between the several counties of England; so would all, by mutual communications, obtain more enjoyments. Those counties do not ruin each other by trade, neither would the nations. No nation was ever ruined by trade, even seemingly the most disadvantageous.

"Wherever desirable superfluities are imported, industry is excited and thereby plenty is produced. Were only necessities permitted to be purchased, men would work no more than was necessary for that purpose."—*Franklin's Essay*.

In March, 1783, he brought into Parliament a bill for the temporary regulation of this intercourse.

By this bill vessels belonging to citizens of the United States were to be admitted into the ports of the West India islands, with goods, or merchandisè of American growth or produce; and they were to be permitted to export to the United States any merchandise or goods whatever; subject only to the same duties and charges as if they had been the property of British natural born subjects, and had been exported and imported in British vessels.

Violent opposition was made to this bill by the British shipping interest, headed by Lord Sheffield; and the Pitt administration being soon after dissolved, the bill itself was laid aside; and the power of regulating the commercial intercourse between the two countries was, by the succeeding administration, lodged with the king and council. By orders in council soon after issued, "American vessels were entirely excluded from the British West Indies; and some of the staple productions of the United States, particularly fish, beef, pork, butter, lard, &c., were not permitted to be carried there, even in British bottoms."

But we must admit, that if there were an absence of wisdom, in respect to commercial policy, in the general, as well as in each state government, there was manifested in the policy of England a far more lamentable spirit. When Mr. Adams, the United States minister at the court of St. James's, proposed, in 1785, to place the navigation and trade between all the dominions of the crown of England and all the territories of the United States of America, upon a basis of perfect, and liberal, reciprocity, this generous proposal was not only positively rejected, but he was given to understand that no other would be entertained.*

* The British government refused to accede to this or any other commercial treaty. Mr. Adams, in his letter to the American Secretary of Foreign Affairs (Mr. Jay), dated London, the 21st of October, 1785, referring to this subject, says—"This being the state of things, you may depend upon it the commerce of America will have no relief, at present, nor, in my opinion, ever, until the United States shall have generally passed navigation acts. If this measure is not adopted, we shall be denied, and the more we suffer, the more will our calamities be laughed at. My most earnest exhortations to the states, then, are, and ought to be, to lose no time in passing such acts."

Some of the states passed acts of the character recommended by Mr. Adams; but the others not concurring, they were unavailing, and were repealed.

This was one of the principal causes of the adoption of the present constitution. The acts passed by the first Congress that met under the new form of government, imposing the discriminating tonnage, and other duties, did not escape the particular notice of British statesmen. Their injurious effects, upon the navigating interest of Great Britain, were at once perceived by them. They saw that American commerce was no longer at the mercy of thirteen distinct legislative bodies, not subject to the control of the king and council. As early as the 20th of September, 1789, therefore, the acts imposing those duties were referred to the lords of the committee of the board of trade.

The same committee was afterwards instructed to consider and report, "what were the proposals of a commercial nature it would be proper to be made by their government to the United States."

In January, 1791, this committee made a report, not only upon the subject of the American duties, but also upon the general subject of the commercial relations between the two countries. This report was drawn up by Lord Liverpool; and on the subject of a commercial treaty, espe-

Instead of acting wisely, and scorning an offer which would have been so beneficial to the empire, it was, by strong sovereign will, decreed, that the full measure of stringency, provided for in the Navigation Act, should be extended to the ships, the trade, and the citizens of the United States.

In consequence of this wretched policy, on the part of the then sovereign and ministers of England, the government and Congress of the United States, on the adoption of the constitution, passed also a Navigation act, which, as regards British trade and shipping, contained the same provisions as the navigation law of England.

In 1789 a tariff of duties on foreign goods was imposed, upon the principle of creating, maintaining, and protecting domestic manufactures.

As a revenue tariff, this tariff was based on an utter disregard of fixed principles. It may be said to have been continued until 1816—meantime, what was the conduct of the government?

Foreign countries always complained of the British navigation laws; but during the war the circumstances detailed, in the first part of this article, rendered any countervailing legislation, on the part of European nations, of little injury to British trade or shipping. This circumstance did not, however, apply to the maritime and commercial relations between the British empire and the United States of America. These considerations, led finally to the adoption of the reciprocity system, which was first argued, and advocated, as well as the system of countervailing and protective duties, by the celebrated Alexander Hamilton.

In the American navigation laws, countervailing duties were imposed, upon all foreign vessels trading to the United States, of half a dollar per ton duty beyond what should at any time be paid by American ships (the duty was soon after doubled); and, further, that goods imported in foreign vessels should pay a duty of ten per cent over and above, what was payable on the same description of goods when imported in American vessels.

These countervailing duties were directed against the navigation of Great Britain, and grounded on the same principles as the British navigation laws. Various

cially in reference to navigation, it states—"After full consideration of all that has been offered on the subject of navigation, the committee think that there is but one proposition, which it would be advisable for the ministers of Great Britain to make, on this head, to the government of the United States, in a negotiation for a commercial treaty between the two countries, viz.: that British ships, trading to the ports of the United States, should be there treated, with respect to the duties on tonnage and imports, in like manner, as the ships of the United States shall be treated in the ports of Great Britain."

The committee add, however—"If Congress should propose (as they certainly will) that the principle of equality should be extended to the ports of our colonies and islands, and that the ships of the United States should be there treated as British ships, it should be answered that this demand cannot be admitted, even as a subject of negotiation."

As to the advantages this circuitous trade would secure to British shipping, the same committee say—"Many vessels now go from the ports of Great Britain, carrying British manufactures to the United States; there load with lumber and provisions for the British islands, and return with the produce of these islands to Great Britain. The whole of this branch of trade," they add, "may also be considered as a new acquisition, and was attained by your majesty's order in council before-mentioned, which has operated to the increase of British navigation compared with that of the United States."

measures to counteract the American system were devised by the British government, and they failed upon the principle of our continuing to maintain in full force the navigation laws. To all intelligent men it became evident that we had engaged in an unequal struggle, and that the real effect of our policy was to give a bounty on the importation of the manufactured goods of other countries into the United States, to the gradual exclusion, both of our manufactures, and ships, from the ports of America. By a commercial treaty agreed upon between Great Britain and the United States in 1815, it was stipulated that in future *equal charges* should be imposed on the ships of either country in the ports of the other, and that *equal duties* should be laid upon all articles, the produce of the one country, imported into the other, whether such importation were effected in the ships of the one or the other, and further that no higher duties should be levied upon the produce of, or manufactures, of the one, or the other, than upon the produce or manufactures of the most favoured nation.

This is usually considered the first English reciprocity treaty: but such is not the fact. Our early treaties with Spain and Denmark were reciprocity treaties: in the trade with which countries England, however, had always contrived to obtain the chief advantages.

The Americans continue to complain that, as far as the British colonial trade is open to them, although the letter of the treaty is extended to them, that the full principle of reciprocity is not faithfully observed: inasmuch as a British ship can carry a full cargo, or part of a cargo, from a British to a colonial port,—discharge the whole, or part thereof, there: then proceed, reladen, to any port in the United States, and from thence carry a cargo, from the United States, to any other part of the world: or, a British ship may sail with a cargo in the first instance from a British possession to the United States, — then with another cargo to a port in the United States,—there re-lade, and then proceed to any part of the world; while an American ship can only import a cargo direct from the United States to a British port; and although an American ship may re-lade in England and sail to any foreign port, it cannot sail from England to any British possessions:—the East Indian territories excepted.

We admit this legal inequality; and we are convinced that it would be for the interest of both nations to place the trade of every port in the United States, and every port of the British empire, for the ships of both countries, upon the footing of an unrestricted coasting trade. There is no one could deny the immense increase of the carrying trade, which, under a liberal tariff, would follow. The shipping of both countries, instead of being injured, would benefit by such a truly great measure. If the countries, constituting the United States, had continued to this day British possessions, this would have been the present state of the trade and navigation between those countries and every other part of the British empire. To deny this, would be the same as saying it would be wise commercial policy to place the navigation between the different ports of the United

Kingdom, and of those of British America and of the West and East Indies, upon the same footing as the laws of trade and navigation with foreign ports. Why should not England and America now enjoy the most unrestricted mutual commercial advantages, when England has neither the expense nor perplexity of governing the American states, as colonies, and when the Americans have not the argument to urge of British subjection, interference, or menace?

Neither in England nor America has the consideration of this question received that grave, earnest attention, which the incalculable importance of international trade and navigation demands.*

* The late Mr. Condé Raguet, President of the Chamber of Commerce of Philadelphia, who thoroughly understood sound commercial and fiscal principles, quaintly introduces an article on the impolicy of countervailing duties, as follows:—

"In the twenty second chapter of the First Book of Kings, we read that Ahab, the King of Israel, invited Jehoshaphat, the King of Judah, to go with him to battle to Ramoth-Gilead, and that the latter consented to go, but at the same time expressed a wish that the former would consult his prophets as to the probable issue of the expedition. We further read, that in compliance with this request, Ahab consulted four hundred prophets, who assured him of victory; but that Jehoshaphat having doubts of the truth of their prediction, and suspecting, perhaps, that they were more of court sycophants and politicians than prophets, was not entirely satisfied with their reply. The following question will show the sequel:

"And Jehoshaphat said, 'Is there not here a prophet of the Lord besides, that we might inquire of him?'

"And the King of Israel said unto Jehoshaphat, 'There is yet one man, Micaiah, the son of Imlah, by whom we may inquire of the Lord; but I hate him; for he doth not prophesy good concerning me, but evil.'

"A dislike to hear the truth when opposed to one's interests or prejudices, has always existed in the world, and may be considered to be the cause of a large portion of the mischievous errors which so universally prevail. The fault of Ahab, recorded in the chapter referred to, is the fault of nine men out of ten at the present day, who, instead of applying to the sources where truth is most likely to be found, with the honest intention of being guided by its dictates, endeavour to find false prophets who will prophesy unto them 'smooth things,' in order to confirm them in their preconcived errors, and minister to their ambition and avarice. Most especially is this true amongst the people of the United States, in reference to those two most important branches of knowledge, the science of government, and the science of political economy; and hence have arisen in the one case, parties which have no fixed principles of action, and in the other, a school of theorists, who propose to make a nation rich by the adoption of measures which can only produce an opposite effect."

Mr. S. G. Arnold, in an article on the absurdity of prohibitions and protections, observes—

"This doctrine of saving money is one of those popular fallacies which are but too prevalent on the subject of *national wealth*. It should be remembered that commerce is an exchange of equivalents; an exchange which is equally beneficial to both parties. Now it makes no sort of difference whether this exchange is effected by means of money or of goods, as in either it is made *value for value*. If a man wants a hat more than he wants five dollars, he is none the poorer for parting with his money. The loss or gain, therefore, which would attend the home production of silk, must depend on something else beside the mere passage of money across the Atlantic.

"The hatter who should undertake to *save money* by making his own boots, would be regarded as a very poor economist; as every body knows that he could procure more boots by giving his undivided attention to his own business, and exchanging products with the bootmaker, than he could by dividing his time between boots and hats. So, as it regards the culture of silk—the *saving* to the country will depend on the fact whether more silk can be obtained by raising cotton, or wheat, or tobacco, than by cultivating mulberries and propagating silkworms. If it costs more to produce the silk than to procure it by exchange, it is clearly *no saving to the country*."

The liberal commercial policy, which was proposed by Mr. Pitt, on the part of England, and of Mr. Adams on the part of the United States, having been defeated by an adverse party in Great Britain, the adoption of a counterpart of the British navigation law was adopted and enforced by the United States, and persevered in to this day. Some relaxations have been made, however, towards those countries which treat American vessels upon more favourable terms than they are treated in British ports. An unsound tariff, on protective principles, was adopted by America; and revenue cruisers were built to enforce the United States customs laws—all in imitation of England. Steam revenue-cutters have since then been established to guard the coast against smugglers.

"Another fallacy, quite as common as the last, is, that protection is necessary to encourage *domestic industry*. Thus we often hear it asked, when articles of luxury are brought into the country for the rich, 'Why such men do not encourage *home manufacture*, and give encouragement to *domestic industry*?' At first view, this position may appear quite natural. But let us examine it a little more closely. These articles have been procured abroad in exchange for American products, and are therefore just as much the result of American industry as if they had been produced at home. Who will say that the labourer, who, at the end of the week, exchanges his wages for a coat, has not procured it by his own industry just as much as if he had fabricated it with his own hand?

"Further: let us suppose that a wealthy farmer of New York chooses to clothe his family in the richest kind of silk. He could do it in two ways. He might, 1st, employ a dozen men to plant mulberries, and carry on the manufacture on his own farm; or, 2nd, he might set these men to ploughing his fields and producing a crop of wheat. The wheat thus raised, he would exchange with a southern planter for cotton, and this cotton he would exchange with the French merchant for silk. Who will say that the foreign silk is not just as much the product of *American industry* as though it had been made directly by the labourers of the New York farmer?

"But it is said, again, that although under a protective policy, we may be obliged at first to ask a higher price for our productions; yet having once introduced them, they will, in the end, become cheaper by competition than before, and that we shall finally reap a benefit from protection. To this we answer, 1st, that if the soil, climate, &c., present natural obstacles to the production of any article, no competition can ever make it profitable; and, 2nd, that all things being as favourable as in other countries, except labour and capital, still, as no competition can ever reduce prices below the cost of production, and as these circumstances must continue to influence the cost of production while they remain, the protective policy can have no favourable effect in lowering prices.

"In a country like ours, where every thing is progressive, an article which may not be profitably produced now, may be profitably produced at some future time, when capital shall have become more abundant, and labour less productive. To attempt to anticipate that time by means of the forcing system of protection can never prove advantageous to a country, as it must inevitably be attended with public loss, and by injuring the accumulating capital of the nation have a direct tendency to put off that time to a more distant day.

"Besides, it must not be forgotten that our situation, located, as we are, some thousands of miles from the most producing nations, is itself a natural protection, and that this protection is still further increased by the duties which are required for the support of government. These give us an advantage without the special interposition of the state, which is quite sufficient to stimulate our enterprising citizens to the pursuit of wealth in every mode of industry which offers the least prospect of success.

"In short, we are fully satisfied that the only sure guide to wealth and prosperity is FREEDOM, entire and unrestricted FREEDOM. It is, we think, a great mistake for

governments to compel men into this or that mode of production. We believe it to be no part of their duty ; and it seldom fails of leading, in the end, to disaster and ruin. Under a system of free trade, men are guided by the instinct of their own interests, and the cotton-planter, the wheat-grower, the manufacturer, the blacksmith, hatter, shoemaker, tanner, &c., all fix themselves in such situations as they believe will be most profitable to themselves ; and unless they greatly mistake their own interests, their choice will be best calculated to produce the greatest amount of products to the country.

"The best protection, then, is the protection of all men in their persons and property—the protection of society by means of general education—and the protection of our flag wherever it shall be unfurled to the four winds of heaven. It is such protection which gives nerve to enterprise, spirit to industry, and wing to commerce ; and which is destined to carry forward our country in that mighty and glorious progress which she has commenced with such Herculean and lofty strides."

The preambles of the two first revenue bills declared that they were imposed for protection and for revenue ; but the rates of duty did not really amount to a great restriction.*

The preambles, in fact, embrace no more than an erroneous deduction based upon the following passage, delivered by Washington on the 8th of January, 1790, in his second annual message, viz.—

"A free people ought not only to be armed, but disciplined ; to which end, a uniform and well-digested plan is requisite, and their safety and interest require that they should promote such manufactures as tend to render them independent of others for essential, particularly for military supplies. The advancement of agriculture, commerce, and manufactures, by all proper means, will not, I trust, need recommendation ; but I cannot forbear intimating to you the expediency of giving effectual encouragement as well to the introduction of new and useful inventions from abroad, as to the exertions of skill and genius in producing them at home."

On January 15th, 1790, the House of Representatives adopted the following resolution :—

"Ordered, that it be referred to the secretary of the Treasury to prepare and report to this house, a proper plan or plans, conformable to the recommendation of the President of the United States, in his speech to both houses of Congress, for the encouragement and promotion of such manufactures as will tend to render the United States independent."

The secretary of the Treasury at that time was the celebrated Mr. Hamilton. A fallacy, if once entertained by a strong mind, enlightened upon most subjects, and by a character of unimpeached integrity, cannot fail to be pernicious. Such unfortunately was the effect of the unsound views taken with undoubted patriotism and honesty of purpose, by Mr. Hamilton. His views, although not at first adopted, were ultimately sanctioned.

On the 5th of December, 1791, his celebrated report on manufactures was presented to the House of Representatives.

* The preamble of this act declared : Whereas it is necessary, for the support of government, for the discharge of the debts of the United States, and the encouragement and promotion of manufactures, that duties be laid on goods, wares, and merchandises imported—

SECTION I. *Be it enacted, &c.*

Notwithstanding the declaration of the preamble, that one of the objects of the bill was the promotion of manufactures, the bill gives earnest of no such intention. The recital became a complement of peculiar emptiness when it was discovered that the highest *ad valorem* duties were fifteen per cent ; and these were imposed, not on rival manufactures, but on such foreign luxuries as a sumptuary law, which was strongly allied with the prejudices of the revolutionary statesmen, might be supposed to operate. Ten per cent was the average duty on foreign manufactured goods ; and such a duty, it is manifest, savours far more of revenue than of protection.

On the 23rd of January, 1792, the house came to the following order:—

"Ordered, That the report of the secretary of the treasury, on the subject of manufactures, be committed to a committee of the whole house, on Monday next."

Protection, however, excepting so far as might be concealed under the revenue principle, did not receive the sanction of Congress.

On the 10th of August, 1790, before the presentation of Mr. Hamilton's report, the second revenue bill received the sanction of the president. The preamble declares:—

"Whereas, by an act entitled 'An act for laying a duty on goods, wares, and merchandises imported into the United States,' divers duties were laid on goods, wares, and merchandises so imported, for the discharge of the debts of the United States, and the encouragement and protection of manufactures; And whereas the support of government and the discharge of the said debts render it necessary to increase the said duties,

But this act, was in its scale of duties purely a revenue bill: and the increase of duties on foreign teas and coffees, on spirits and wines, and on those enumerated in the following clause, show that the principle of protection to manufactures was not introduced, except in the preamble:

"On cabinet wares, buttons, saddles, gloves of leather, hats of beaver, felt, wool, or a mixture of any of them; millinery, ready made; castings of iron, and slit and rolled iron; leather, tanned or tawed, and all manufactures of which leather is the article of chief value, except such as are herein otherwise rated; canes, walking-sticks, and whips; clothing, ready made, brushes; anelors; all wares of tin, pewter, or copper, all or any of them; medicinal drugs, except those commonly used in dyeing; carpets, and carpeting; all velvets, velveteens, satins, and other wrought silks; cambrics, muslins, muslinets, lawns, laces, gauzes, chintzes, and coloured calicoes and nankeens, seven and a half per cent, ad valorem."

In the following tariffs, which include all that followed previous to the year 1816, not only was the preamble free from allusion to the protective system, but the rates, although in some cases too high, were framed on the exclusive revenue requisitions:—

In consequence, of the war having nearly annihilated the revenue from customs, and of the debt incurred, which exceeded 100,000,000 dollars, on which there was 6,000,000 dollars annual interest. Mr. Dallas, secretary to the treasury, submitted a report to Congress, suggesting "That, in the year 1817, and annually in every subsequent year, there be appropriated the sum of 2,000,000 dollars, in addition to the sum of 8,000,000 dollars now annually appropriated, for the payment of the interest and principal of the public debt; that the payment of this additional sum be made out of the proceeds of the revenue derived from the customs, the sale of public lands, and the internal duties, or either of them, available after the payment of the sums for which they are now respectively pledged or appropriated; and that the said additional sum of 2,000,000 dollars annually be payable to the commissioners of the sinking fund, to be applied by them in the same manner as the moneys which they are now entitled by law to receive; that is to say—1st. To the payment of the interest on the public funded debt. 2nd. To the reimbursement of the principal, from time to time, as the same, or any portion of it, shall become reimbursable, according to the terms of the contracts by which it has been created. 3rd. After having answered these purposes, if there shall remain a surplus at their disposal, to the purchase of such parts of the public funded debt as shall appear to them to be most to the advantage of the United States,

in the manner prescribed by law, and at a rate not exceeding the par value." The assumed object was to raise the maximum of revenue, which a tax on imports would yield.

In his opening message, Mr. Madison strongly urged the duty of providing amply for the debt, collateral to which, in order to carry all other parties, he dwelt upon those arguments which "the necessities of the manufactures afforded."

On March 20th, 1816, the committee reported to the house a bill, which, with some amendments, was sanctioned by Mr. Madison, and included the celebrated protective tariff of 1816.

SECTION I. Be it enacted, by the Senate and House of Representatives, in Congress assembled That from and after the 30th day of June, one thousand eight hundred and sixteen, the duties heretofore laid by law on goods, wares, and merchandise, imported into the United States, shall cease and determine; and there shall be levied, and collected, and paid, the several duties hereinafter mentioned; that is to say:—

A duty of twenty-five per centum, *ad valorem*, on hempen cloth, or sail cloth, (except Russian and German linens, Russia and Holland duck,) stockings, of wool or cotton; printing-types; all articles manufactured from brass, copper, iron, steel, pewter, lead, or tin, or of which these metals, or either of them, is the material of chief value; brass wire, cutlery, pins, needles, buttons, button-moulds, and buckles of all kinds; gilt, plated, and japanned wares, of all kinds; cannon, muskets, fire-arms, and side-arms; Prussian blue, Chinaware, earthenware, stoneware, porcelain, and glass manufactures, other than window glass, and black glass quarts bottles.

A duty of twenty-five per centum, *ad valorem*, on woollen manufactures of all descriptions, or of which wool is the material of chief value, excepting blankets, woollen rugs, and worsted, or stuff goods, shall be levied, collected, and paid, from and after the 30th day of June next, until the 30th day of June, one thousand eight hundred and nineteen, and after that day, twenty per centum on said articles; and on cotton manufactures, of all descriptions, or of which cotton is the material of chief value, and on cotton twist, yarn, or thread, as follows, *viz.*: for three years next ensuing the 30th day of June next, a duty of twenty-five per centum, *ad valorem*; and, after the expiration of the three years aforesaid, a duty of twenty per centum, *ad valorem*.

A duty of thirty per centum, *ad valorem*, on carriages of all descriptions, and parts thereof; leather, and all manufactures of leather, or of which leather is the material of chief value; saddles, bridles, harness; paper of every description, pasteboard, paper-languages, blank-books, parchment, vellum, brushes, canes, walking-sticks, whips, and clothing ready made. And in all cases where an *ad valorem* duty shall be charged, it shall be calculated on the nett cost of the article at the place whence imported (exclusive of packages, commissions, and all charges), with the usual addition established by law, of twenty per cent on all merchandise imported from places beyond the Cape of Good Hope, and of ten per cent on all articles imported from all other places.

The following duties, severally and specifically:—On tarred cables and cordage, three cents per lb.; on untarred cordage, yarns, twine, packthread, and seines, four cents per lb.; on wax and spermaceti candles, six cents per lb.; on Chinese cassia, six cents per lb.; on cinnamon, twenty-five cents per lb.; on cloves, twenty-five cents per lb.; on cheese, nine cents per lb.; on chocolate three cents per lb.; on cocoa, two cents per lb.; on coal, five cents per heaped bushel; on copra, one dollar per cwt.; on copper rods, bolts, spikes, or nails, and composition rods, bolts, spikes, or nails, four cents per lb.; on coffee, five cents per lb.; on cotton, three cents per lb.; on gunpowder, eight cents per lb.; on hemp, one dollar and fifty cents per cwt.; on iron or steel wire, not exceeding No. 18, five cents per lb., and over No. 18, nine cents per lb.; on iron in bars and bolts, excepting iron manufactured by rolling, forty-five cents per cwt.; on iron in sheets, rods, and hoops, two dollars and fifty cents per cwt.; and in bars or bolts, when manufactured by rolling, and on anchors, one dollar and fifty cents per cwt.; on indigo, fifteen cents per lb.; on lead in pigs, bars, or sheets, one cent per lb.; on shot manufactured of lead, two cents per lb.; on red and white lead, dry, or ground in oil, three cents per lb.; on steel, one dollar per cwt.; on cigars, two dollars and fifty cents per thousand; on spirits from grain, of first proof, forty-two cents per gallon; of second proof, forty-five cents per gallon; of third proof, forty-eight cents per gallon; of fourth proof, fifty-two cents per gallon; of fifth proof, sixty cents per gallon; above fifth proof, seventy-five cents per gallon; on spirits from other materials than grain, of first and second proof, thirty-eight cents per gallon; of third proof, forty-two cents per gallon, of fourth proof, forty-eight cents per gallon; of fifth proof, fifty-seven cents per gallon; above fifth proof, seventy cents per gallon; on shoes and slippers of silk, thirty cents per pair; on shoes and slippers of leather, twenty-five cents per pair; on shoes and slippers for children, fifteen cents per pair; on spikes, two cents per lb.; on soap, three cents per lb.; on brown sugar, three cents per lb.; on white, clayed, or powdered sugar, four cents per lb.; on lump sugar, ten cents per lb.; on loaf sugar, and sugar candy, twelve cents per lb.; on snuff, twelve cents per lb.; on tallow,

one cent per lb. ; on tea from China, in ships or vessels of the United States, as follows, viz. : bohea, twelve cents per lb. ; souchong, and other black, twenty-five cents per lb. ; imperial, gunpowder, and gomee, fifty cents per lb. ; hyson and young hyson forty cents per lb. ; hyson skin, and other green, twenty-eight cents per lb. ; on teas from any other place, or in any other than ships or vessels of the United States, as follows, viz. : bohea, fourteen cents per lb. ; souchong, and other black, thirty-four cents per lb. ; imperial, gunpowder, and gomee, sixty-eight cents per lb. ; hyson, and young hyson, fifty-six cents per lb. ; hyson skin, and other green, thirty-eight cents per lb.

Such was the first tariff, which was avowedly in principle protective ; a tariff which underwent modification afterwards, but which continued unsound in all its principles. With reference to the modifications of the tariff, Mr. Pitkin, a disciple of the protective system, observes :—

“ We would here observe that a *permanent duty* of thirty per cent *ad valorem* was imposed on various other articles ; and among these were hats, cabinet wares, and all manufactures of wood, carriages of all descriptions, leather and all manufactures of leather, and paper of every description. And to encourage the manufacture of domestic sugar, a specific duty of three cents per lb., was laid on all imported brown sugar.

“ Without advertent to the details of the various acts, afterwards passed, altering that of 1816, we would observe, that the duty on bar iron was raised in 1818, and that in 1824, the duties on woollens and cottons was revised ; and that by the act of that year, a duty of twenty-five per cent was laid on all woollen goods, the value of which should not exceed 33½ cents per square yard ; and after June 30th, 1825, a duty of 33½ per cent *ad valorem* was imposed upon those costing more than 33½ cents per square yard, with the exception of blankets and stuff goods.

“ Much more time, skill and experience are requisite in the various branches of the manufacture of wool, than in that of almost any other article, in order to meet, with success, more experienced foreign manufacturers.

“ In addition to the want of skill and experience, the American manufacturer of wool had to struggle with the countervailing laws and regulations of the British government, made with the express view of injuring this branch of American industry ; or, in the language of Brougham, ‘ to stifle it in its cradle.’ One of the countervailing measures of that government, was a reduction of the duty on imported wool. Prior to the American act of 1824, the duty on wool imported into England was sixpence sterling per lb. ; but soon after the passage of this act, this duty was reduced to one penny per lb. ; and for the purpose, as the debates in parliament show, of enabling the British manufacturer to send his woollens to the United States at a cheaper rate. And, not long after, with the same view, the duty on all wool, the price of which was less than one shilling sterling, was reduced to a half-penny.

“ The American manufacturer of wool,” says Mr. Pitkin, “ finding it difficult, if not impossible, to struggle against all these difficulties, again applied to Congress for aid, and the celebrated Tariff act of 1828, was the result of this application—*an act, which has been declared not only highly oppressive to the great mass of the community, and injurious to commerce, but in direct violation of the constitution itself.*

“ By this Act, the minimum system was extended generally to woollens. All manufactures of wool, with some exceptions, the value of which did not exceed fifty cents the square yard, paid a duty on that sum, of forty-five per cent *ad valorem* ; those, the value of which exceeded fifty cents, but did not exceed 1 dollar the square yard, paid a duty of forty-five per cent *ad valorem* on the latter sum ; those between 1 dollar and 2 dollars 50 cents, the same duty on the latter sum ; those between 2 dollars 50 cents and 4 dollars, the same duty on the latter sum, and those exceeding 4 dollars, fifty per cent *ad valorem*.

“ Unmanufactured wool was also subjected to a duty of four cents per lb. and forty per cent *ad valorem*. Additional duties were also laid upon iron, hemp, flax, and molasses ; and the minimum price of cottons was raised to thirty-five cents the square yard. The policy of this act was questioned by many of the merchants of this country, and its constitutionality by most of the people of the southern states. Unfortunately,

it was a compound made up by its enemies as well as its friends, and was not satisfactory to either.

The time was now approaching, when the national debt, being nearly extinguished, the sinking fund, amounting to 10,000,000 dollars annually, would be no longer wanted. A new modification of the revenue system, would soon be necessary, to meet the new state of the financial affairs of this country. In this modification of the duties, the advocates of the protecting system, contemplated a reduction of the duties principally on those articles, which had not been, or could not be, produced in this country; while its opposers, on the other hand, insisted on an abandonment of the system itself, by making the duties on all imports about equal. With a view of obtaining information and enlightening the public mind on this great and interesting subject, two Conventions were held, in the summer and fall of 1831; one in the city of Philadelphia, called the anti-tariff or free-trade convention—the other at the city of New York, called the tariff convention. Both were composed of gentlemen distinguished for talents and experience; and their addresses to the people of the United States, and memorials to Congress, or as they may be called, essays expressive of their different views of the questions of political economy then agitated, were drawn up with no ordinary care and ability, and must always take a high rank among the state papers of that period. Under the influence of these conventions, Congress, after much debate, proceeded to modify the preceding tariffs, by an act of the 14th of July, 1832, to take effect after the 1st of March, 1833. It was called the Compromise Act; and the Tariff on a decreasing Scale.”—*Pitkin's Statistics of the United States*.

This modified tariff will clearly appear to be based upon false principles: those of maintaining and creating home manufactures by a tax of at least from twenty-one and a half to twenty-nine per cent, exclusive of other charges, on the value of all the cotton, woollen, and linen manufactures worn by, and on most articles of iron and other metals used by, all the citizens of the United States.

To prove this beyond any shadow of dispute, the manufactured, and all other articles, not likely to compete with those of the United States, were either admitted duty free, or at very moderate duties.

The duties levied under the tariff, in existence previous to the 14th of July, 1832, were avowedly directed against the admission of foreign manufactures in order to protect those of the United States. The duties were:

	Per cent
Cottons, white, valued per square yard under thirty cents, duty ad valorem	42½
Cottons, coloured, valued per square yard thirty-five cents	42½
Woollen manufactures, value less than eight cents per lb.	free
Woollen manufactures, value exceeding eight cents per lb.	54
Woollen cloths milled, all kinds, and flannels	50
Nails, value five cents per lb.	78
Bar iron, rolled	95
Ditto, hammered	35

The above duties were, by Mr. Clay's bill, to be reduced gradually every two years, until the whole are diminished to twenty per cent, ad valorem in 1842.

The following articles were to be reduced from high duties to the following:—

“Articles manufactured, as exceptions to the foregoing, and others on which the high or protective duties were levied in the old tariff, viz.: shops or made up clothing and hosiery, bags of wool and cotton, kendals of cotton, 2nd wool, blank books, waste cards, glass manufactures, pianofortes, artificial flowers, copper and brass manufactures, ironmongery, cutlery, tin and pewter wares, except tools, fire and side arms, carvings of all descriptions, mathematical instruments, fishing nets, brushes of all kinds, saddlery, shoes and boots, and nearly every article into which cotton, wool, hair, iron, copper, enter into the manufacture, to be admitted twenty-nine per cent maximum, twenty-three per cent medium, and twenty-one and a half per cent minimum, *ad valorem* duties.

“The following articles to be admitted at the enormous duties annexed:

“Paper for writing, printing, &c., fifteen to twenty-five cents per lb., or 7d. to 1s. per lb.

" Books printed in the English language, bound, thirty cents, or 1s. 2d. per lb., unbound, twenty-six cents, or 1s. $\frac{3}{4}$ d. per lb.

" Felt hats, eighteen cents the lb.

" Cordage, four to five cents the lb.

" All silk manufactures are admitted *duty free*, except silks from beyond the Cape, at ten per cent.

" Ditto raw, twelve and a half per cent.

" Ditto, sewing (or silk thread) twenty-six per cent.

" Sugar and distilled spirits are admitted at very moderate duties, which among the many other low rates and duty-free articles, prove how little fiscal considerations have entered into the principles of this tariff.

" Wines are also admitted, especially those of France and Germany, at little more than nominal duties; but discriminatory duties are imposed on those of Spain and Portugal.

" The following among many other articles are exempt from duty:—

" Acetates, acids nearly of all kinds, almonds, aloes, adhesive, and other plasters, ambergris, alabaster and marble figures, argol, barilla, bamboos, bark of all kinds; balls, dice, &c., of ivory; black pepper, bees-wax; brass in plates, bars, and pigs; brimstone and sulphur, brazil-paste, bones, teeth, and manufactures of ivory, burgundy-pitch, bronze casts and busts, calomel, camomile flowers, camphor, cantharides, capers, cassia, castanas, catsup, chalk, chemical preparations and oils nearly of all kinds, cinnamon, cloves, cochineal, cocoa, and coffee, coculus indicus, copper for sheathing ships, coral, corks, corrosive sublimate, coryander seed, crude saltpetre, currants, cutlasses, daggers, dates, dirks, dolls of wax, if undressed, drillings of jute flax, epaulettes of gold and silver, figs, filberts, filtering stones, fish-sauces, fisheries of United States, flax and hemp unmanufactured, frankincense, ginger, grapes, gamboge, gum-arabic and other gums, hair and wool, hair pencils, hats of palm leaf, hemlock, hemp and flax seeds, henbane, hones, honey, hops, horns of all kinds and tips, horn plates for lanterns, ink, ipecacuanha, India rubber, models of inventions and machines, isinglass, ivory-black; ivory manufactured, except combs; juniper berries, lac-dye, lead ores, linseed cake, mace, madder and its root, macaroni and vermicelli, marble, Manilla hemp, preparations of mercury, mill-stones, models of all kinds, musk, nutmegs; nuts and berries used in dyeing, and of all kinds; oakum; oil of juniper, and all oils except fish-oils and perfumed oils; olives, opium, paintings and drawings, phosphorous, pimento, pipes of clay for smoking, prunes, putty, quicksilver, quills prepared, quadrants, raisins in jars and boxes and all others, rattans unmanufactured, reeds manufactured, rhubarb, rotten-stone, saffron, saltpetre, sago; skins and hides raw, and not made-up or tanned; sextants, smalts, shellac, slate-pencils, sponges, spy-glasses, skins of all kinds for musical instruments, sumac, succory, tamarinds; tartar, viz., crude; tea, all kinds, imported in United States vessels from beyond the Cape of Good Hope; telescopes, tin-foil, tin in plates and sheets, tortoise-shell, tar from coal only, turmeric; vegetables, such as are used principally in dyeing and in composing dyes and drugs; vitriol blue, fancy wood of all kinds, wood or pastel, water colours, weld, and all articles used principally for dyeing, coming formerly under the duty of twelve and a half per cent.

" All other dyeing drugs and materials for composing dyes; all other medicinal drugs and all articles not enumerated in this act, nor the existing laws, and which are now liable to an ad valorem duty of fifteen per cent, all to be free, with a few exceptions at duties, from one to fifteen per cent the highest."

This tariff was not based upon sound fiscal principles.† It was a *blundering*

* Moderate calculations have rated the tax imposed by these tariffs on the whole community in order to encourage the manufacturers, at 48,000 dollars per annum. Goods of all kinds cost, in order to afford a home market for home manufactures, about 100 per cent above the fair price.

† The duties in this bill, though much diminished, were highly protective, thirty per cent on most woollen manufactures; on cotton manufactures twenty per cent. Mr Pitkin defends the New England states as follows:—

" We cannot but observe, however, that in the conflict of opinion which has arisen on this question, New England has been placed in a peculiar, and we may add, unfortunate situation.

compromise between monopoly and free-trade. For the time, however, it removed all the perplexing and formidable difficulties of nullifying the Union. But, when its maximum duties were to come into operation, a new policy was adopted in 1842, carried by the spirit of party, much more than by the influence of the manufacturers. The result was the monstrous tariff of that year, printed in a previous part of this work.

A new tariff was prepared in 1844, upon a greatly diminished scale, by the Committee of Ways and Means, of which Mr. Mackay was chairman. The report which accompanied it was drawn up with great clearness and ability. It dwells forcibly on the evils to all classes of frequent changes in the tariff, as well as to the revenue, and reverts to the tariff of 1828, which even the advocates of the manufacturing interests styled the "Bill of Abominations."

The Committee "consider the lowest possible duty necessarily protective, to its extent, though it may be imposed with the single view to revenue, and may be a revenue duty, in the strictest sense of those terms. Commencing at this point, they think that the duty upon any given article should be considered, and is properly called, a revenue duty, so long as an increase of the rate will increase the amount of revenue derived from the importation of the article. This conclusion is based upon the simple fact, that, up to this point, the way to increase the revenue from the given article is to raise the rate of duty; and, although the degree of protection afforded by the duty is increased with the increase of the rate, yet that is an incident, and an unavoidable incident, and cannot change the nature and character of the duty, as a duty to raise, to increase revenue. Pass that point, and raise the rate of duty so high that its prohibitory action diminishes the amount of revenue collected under it, and its character is changed. The protection afforded by it is increased, while the revenue it yields is diminished; thus giving protection as its chief fruit; and revenue as the incident. Continue to raise the rate until the prohibitory action of the duty becomes perfect, all importations of the article cease, and no revenue is realised from the duty. Then, certainly, it cannot be considered or called a revenue duty, and its exclusive object must be protection. It must be, therefore, a protective duty, in the strict sense of the term; and, in the opinion of the committee, it is clearly entitled to that appellation from the point where its prohibitory became paramount to its revenue power, and its increased rate ceases to increase the amount of revenue collected under it. This conclusion is founded upon the equally simple fact, that, at this elevation, the way to increase the revenue is to diminish the rate of

She has been accused of being the author and supporter of the system; and on that account, towards her have been directed some of the keenest shafts of reproach and calumny. Whatever of good or evil there may be in the system, New England was not its author.

"In 1846, it is well known that she voted with the south, and against New York, New Jersey, Pennsylvania, and the western states, on the great question of the extent of protection to be afforded to the manufacture of cotton.

"The committee who reported the tariff bill of that year, recommended a duty of thirty per cent on all imported cotton goods; and on the question of reducing it to twenty-five, nearly two-thirds of the New England members in the house voted for its reduction, while out of forty-three members from New York, New Jersey, and Pennsylvania who voted on the question, nine only were in favour of it. The question of reduction was therefore, carried by the New England votes, joined with those of the south.

"On the tariff of 1824, the votes of New England states were fifteen for, and twenty-three against, it, while those of the states of New York, Pennsylvania, New Jersey, Kentucky, and Ohio, stood seventy-eight for, and nine against; and on the tariff of 1828, the votes of the former were sixteen for, and twenty-three against, and those of the latter stood eighty for, and only six against it. Some of the New England votes on the tariff of 1828, were probably governed by the details of the bill."

duty. The power 'to lay and collect duties' has been carried beyond its object of obtaining revenue 'to pay the debts, and provide for the common defence and general welfare of the United States;' and a reduction of the rate of the duty only will restore the exercise of the power to that object. The understanding of this committee, therefore, is, that, while every duty is necessarily protective to its extent, yet every duty is to be considered, and is properly denominated, a revenue duty, the rate of which yields the largest amount of revenue from the importation of the article upon which it is imposed, or the rate of which is below that point, so that an increase of the rate would produce an increase of the revenue; and that every duty is to be considered, and is properly denominated, a protective duty, the rate of which is so high as to diminish the amount of revenue derived from the importations of the article upon which it is imposed, and the rate of which requires to be reduced to increase the revenue. And when a given amount of revenue is desired to be raised upon any given article of importation, the committee regard the lowest rate of duty which will effect the result as the true and legitimate revenue duty.

"This will show what description of a law the committee would denominate a revenue, and what a protective tariff; and to what extent they would give the one character or the other to any given law. The protection afforded under a revenue tariff, thus defined, they would denominate incidental; and, if the revenue be required, they cannot see that the consequent protection can be a subject of grievance or complaint on the part of any interest. The protection afforded by a protective tariff, according to the same definition, is direct and positive; operates to diminish or destroy the revenue; and constitutes, as the committee believe, an exercise of the power to lay and collect duties entirely indefensible in principle and policy, and often furnishing broad ground for just complaint. The terms 'perfect protection' the committee understand to be synonymous with perfect prohibition; and, therefore, entirely destructive of all revenue, because prohibitory of all importations.

"The terms 'free trade,' in their broad sense, the committee understand to be equally inconsistent with the idea of a revenue from imports, because they suppose that trade, which is perfectly free, cannot be burdened with any duties not imposed to furnish facilities to itself. In this sense, they are assured the phrase is understood in some portions of the country, when used in connexion with legislation of this description; and the advocates of a system of free trade are supposed to be also advocates of a change of one system of revenue from duties on imports, to internal taxation, direct and indirect. The committee believe that, if any hold these views, much the largest class of those who call themselves friends of free trade do not attach to the terms any such extent, and only intend to be understood, by the free trade they advocate, so much freedom of trade as may be enjoyed under a system of duties arranged with sole reference to a supply of the public treasury, and the rates established as low as the economical wants of that treasury will allow."*

* Mr. Mac Duffie's speech in the senate is remarkably clear and conclusive on the tariff questions: those of his opponents, especially that of Mr. Evans, most fallacious yet specious. They consider that, as manufactures have arisen in the United States, it must be owing "to protection." The story over again of the pyramids of Egypt existing; consequently the fertility of the valley of the Nile.

Mr. Mac Duffie insists that the tariff law of 1842 should be called an act to *prevent*, instead of an act to *provide* revenue. He says: "It is entitled an act to *provide* revenue—falsehood and deception stamped on the very front of it. A bill to *provide* revenue! which lays an average duty of a hundred per cent on several descriptions of imports that would come into the United States, to the amount of about 40,000,000 dollars annually, under a revenue duty of twenty per cent, but which are now totally excluded by these enormous duties. I will not go into details, but state generally, that the duties on window-glass range from ninety-four to a hundred and seventy-eight per cent, making an average of more than a hundred and fifty per cent on all descriptions; that the duties on many varieties of manufactured iron, embracing most of the tools and implements necessarily used on every farm and plantation in the country, are from seventy-five to a hundred and fifty per cent, and more ad valorem; that the duty on raw iron, an article in universal use, is 112½ per cent; that the duty on all those cotton manufactures which come under the *minimum* principle of valuation (and which would be imported annually to the amount of 10,000,000 or 15,000,000

"Mr. Benton, in the senate in 1844, takes a middle ground, and sets out with a contrast of the two systems of duties—that of duties imposed wholly for revenue, and that of duties imposed for the mixed objects of protection and revenue. In this con-

dollars, under a revenue duty of twenty per cent), range from sixty to a hundred and fifty per cent on their true value; that the duty on salt—an article of universal use, consumed in almost equal quantities by the rich and the poor, and extensively consumed by every farmer, not only for family purposes, but ten times more extensively for his live stock—is eight cents per bushel (the article costing only five or six cents in Liverpool), equal to 133½ per cent on the original cost."

He says—"A large proportion of the prints and calicoes consumed in the United States, and of which every female of the middle and poorer classes is a consumer, cost, in Manchester, from six to twelve cents a yard; but they are charged with duties of from seventy-five to a hundred and fifty per cent by the ingenious contrivance of an artificial and false valuation."

We now come to a very interesting part of Mr. Mac Duffie's argument, that relating to "discrimination." After denouncing the tariff law of 1842 as an imposition of unrighteous burdens, not for purposes of revenue, but for taking money out of the pockets of one class of the community and putting into those of another, he says—"An idea has got abroad—and I am sorry to say that many of the friends of free trade have been deceived and betrayed by it, as many patriot-soldiers have been by the holding out of false colours—an idea has obtained currency that, although you cannot impose duties for any other purpose but that of revenue, yet you may rightfully impose revenue duties, 'with a wise discrimination for the protection of domestic manufactures.' This is part of the new system of tactics to which the manufacturers have found it necessary to resort. They say one thing, and mean another. What do they mean by 'a wise discrimination?' Obviously a discrimination that will exclude imports and diminish revenue. 'A wise discrimination!' Pray, what is your whole system of revenue—levied, as it is, exclusively from duties on imports—but an enormous discrimination in favour of the manufacturers and their confederates, and against all other classes?"

Mr. Mac Duffie next takes up the allegation that protection means the protection of domestic against foreign industry; and he argues at much length, and gives numerous illustrations, to prove that protection induces a conflict between one branch of domestic industry and another, and that there can be no competition between foreign industry and domestic industry, where there is only an exchange of labour for labour. He regards the protective policy of the last twenty years as destructive of half the commerce of this country, comparing what it is with what it would be but for this policy; and yet what is left has to sustain the government, yielding all its revenue as it has done from the beginning; but it is now rapidly verging to extinction, for Europe will not, and cannot, purchase the exports of this country, if its productions will not be received in exchange. While thus steadily advancing the suicidal policy of destroying commerce, 9,000,000 dollars is asked to support a navy, the only use for which is the protection of commerce. "Against whom," exclaims Mr. Mac Duffie, "is a navy required to defend our Atlantic commerce? Against pirates? Against foreign power? Against Great Britain?—for she is the raw-head and bloody-bones always invoked to silence opposition against wasteful expenditure. As a producer of the great staple on which it (commerce) is mainly founded, I declare, with all solemnity, that I regard the Congress of the United States, as it has been constituted for the last twenty years, as more to be dreaded than all the powers of Europe combined, and all the pirates that ever infested the ocean."

He combats a doctrine, promulgated some years ago, and still held up in favour of protection, that it is necessary to relieve this country from the payment of a tribute to foreign nations. It was first broached by Mr. J. Q. Adams, when president, in one of his messages to Congress. Now what is the fact? The tribute is paid to home manufacturers, not to foreigners, for the latter offer to supply their goods at from twenty to forty per cent cheaper than the home manufacturer, and in exchange too, for the productions of American labour.

"When," observes Mr. Mac Duffie, "you have prohibited the importation of manufactures from Europe, you will have totally destroyed the demand for six-sevenths of our cotton, rendering it utterly valueless."

Mr. Mac Duffie's object was to restore the Compromise Act, and his bill was as follows:—

Sec. 1. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That so much of the existing law imposing duties upon foreign imports as provides that duties ad valorem on certain commodities shall be assessed upon an assumed minimum value, be, and the same is hereby, repealed; and that said duties be hereafter assessed on the true value of such commodities.

Sec. 2. *And be it further enacted*, That in all cases in which the existing duty upon any imported commodity exceeds thirty per centum on the value thereof, such duty shall hereafter be reduced to thirty per centum ad valorem.

trast, he divides the half century during which the government has existed, into two periods of twenty-five years each; the tariff laws of the first period, having revenue for the object, protection being the incident; and those of the second period, having protection for the object, revenue being the incident. A striking difference he points out in these two systems; first, in the amount of duty imposed, and next, in the mode of assessing or computing it. Before the late war, the rate of duty, whether *ad valorem* or specific, was always moderate, never prohibitory, and uniformly laid on with a view to the production of revenue. Since the war, duties have often been exorbitant or prohibitory, and rendered still more exorbitant by the mode of computing them on the assumption of fictitious values.

"During the first of these periods, harmony and happiness prevailed among the industrial classes; the career of labour, in all its branches, was progressively prosperous; the word *tariff* was never heard of; the incidental protection afforded by the absolute wants of the government, was quietly and silently encouraging the growth of manufactures as fast and as steadily as could be justified by the wants of the community; and the great mass of the people was in the happy condition of Molière's country gentleman, who had talked prose all his lifetime without knowing it. To those good old times, Mr. Benton wished to return; to the object and structure of those good old laws, and to the enjoyment of their happy consequences. He disapproves of the *horizontal principle* of the Compromise Act, and is not, therefore in favour of recreating that law; he avows himself in favour of discriminating between articles of luxury and necessity, making luxuries pay highest; he is for discriminating between articles made at home, and those not made at home, putting the highest duties on the foreign rivals of our own products; but he insists on some limitation, in effect, that no duty, whether *ad valorem* or specific, shall exceed 30 or to $33\frac{1}{3}$ per cent. This discrimination and incidental protection he had always advocated. It was admitted by good free trade authorities, as was proved by the South Carolina legislative report of 1828, by the Philadelphia free trade address of 1831, and by the Virginia democratic address of 1839. In a word he was for returning to the system which had worked so well anterior to the late war, when the specific duties rarely exceeded a fourth, or at most a third of the value, and when the *ad valorem* duties ranged only from five to fifteen per cent. The specific duty of $33\frac{1}{3}$ per cent to which he is willing to go for protection, is, in effect, he argues fifty per cent; for the expences of importation being $7\frac{1}{2}$ per cent, and the importing merchants' profits and charges $12\frac{1}{2}$ per cent, these sums, besides the $33\frac{1}{3}$ per cent duty, have to be added to the first cost abroad, before the imported article can come into our market in competition with the home-made article, and on this issue, he and his friends are willing to go to trial before the country.

Sec. 3. *And be it further enacted*, That from and after the 31st day of December next, all duties upon foreign imports shall be reduced to twenty-five per centum; and, from and after the 31st of December, 1844, to twenty per centum *ad valorem*.

It was defeated by the following resolutions, introduced by Mr. Evans:—

Resolved, That the bill entitled "A bill to revive the act of the 2d of March, 1833, usually called the Compromise Act, and to modify the existing duties upon foreign imports in conformity with its provisions," is a bill for raising revenue within the meaning of the 7th section of the 1st article of the Constitution, and cannot therefore originate in the Senate; therefore

Resolved, That it be indefinitely postponed.

In support of his assertions, with regard to the comparative revenue of the two periods, Mr. Benton submitted the following tables:—

TABLE I.—Low Revenue Duties, from 1791 to 1808.

YEARS.	Population.	Income.	YEARS.	Population.	Income.

1830.....	12,866,000	21,932,391	31,500,000				

The third table shows that the same ratio of revenue for population which existed in Mr. Jefferson's time, would, in the present day, yield an income for the treasury of 46,250,000 dollars. Mr. Benton says—'These tables speak a language which cannot be misunderstood, and they place in the strongest contrast the working of the two systems during the two periods; the beauty and advantages of one, and the deformities of the other, standing out in the boldest relief. In the first period, amplitude of amount, steadiness of the product and regularity of the increase, strike every beholder. In the second period, all this is reversed; confusion and madness seem to reign in our treasury. Sometimes millions too much—then not half enough. Sometimes surpluses to be distributed—then deficits to be supplied. Giving away one day—begging or borrowing

the next. Always a feast or a famine—never the right thing. Our poor treasury became a balloon—sometimes soaring above the clouds—then dragging in the mud—now bursting with distension—now collapsing from depletion.’

“Again, after quoting Mr. Jefferson’s last annual message to Congress, showing the prosperous condition of the treasury at that time, Mr. Benton says—‘Such was the working of the low duty system—ample and steady revenue—no loans, no taxes, no paper money—33,500,000 dollars of public debt paid in eight years—a surplus of 14,000,000 dollars left in the treasury—the result, not of lands exchanged for paper, but the regular result of steady revenue, strict economy, and hard money. How different from the state of things under the high duties of the present day! Instead of paying above 30,000,000 dollars of public debt in eight years, we have created near 30,000,000 dollars in four years; instead of a surplus in the treasury, there is a deficit; loans and taxes are the order of the day; and, to crown all, we have an illegal and fraudulent issue of federal paper money currency, issued by executive power, and sustained by bar-b-alliances. Such is the difference between the working of the two systems after twenty-five years trial of each!’

“With regard to the second proposition, that of the superiority of low duties over high duties, in relation to their effect upon agriculture and commerce, Mr. Benton takes the ground that these two interests go together, the state of the one being an index to the other. The exports make the imports, and agriculture is at the bottom of the whole. He contrasts the exports of the two periods—that before the late war, and that succeeding the war—with a view of showing that, in consequence of the high duty system, with a population of 18,000,000, in 1842, we exported less than we did in 1807, with a population of 7,000,000, under the low duty system. In support of this, he adduces the following tables:—

TABLE of Foreign and Domestic Exports from the United States, from 1791 to 1807.

1830.....	73,840,508	12,866,000			

“As there is, in making out tables of this kind, an apparent intricacy, so far as regards re-exports, it is proper to give Mr. Benton’s explanation, that, in comparing, the two periods, it makes no difference whether the re-exports are included or not. He says, ‘I fully understand the nature of our neutral position during the wars of the French

Revolution, and the effect which that neutrality had in promoting imports for re-exportation. We re-exported much from 1791 to 1807, and have re-exported exactly as much from 1817 to 1844! Mexico, South America, and the West Indies, have opened new markets for our re-exportations; and it is a fact, proved by the custom-house returns to be the same; 520,000,000 dollars are, as near as I can ascertain from the most careful research, the amount of re-exportations for each period; so that, in a comparison of the foreign trade in each period, they may either be both omitted or both included, as the speaker pleases. Finding them included in the tables, I choose to use them in that way. The table of revenue has already settled the question in favour of the large amount of foreign goods which remained in the country for consumption. Duties were only paid on the amount so remaining; and a revenue of 16,000,000 dollars, or 17,000,000 dollars from customs, with the low duties then paid, show that the importations for home consumption were greater then than now.

"Assuming the average exports of the present day to be 100,000,000 dollars, Mr. Benton says, take from this sum the article of cotton, now forming two-thirds of our exports, and contras. the balance with that of the exports of 1807, when cotton formed an inconsiderable item, *and an immense falling off will be apparent in our exports of agricultural products.* Had our exports not been checked by the high duty system, affecting imports, and had they been allowed to increase, in the ratio of the increase of population, to that increase would have been superadded the item of cotton; so that, when all this is considered, Mr. Benton says, 'the decline of agriculture, and of the foreign commerce founded upon it, becomes appalling. Leaving out cotton, and the agricultural exports are less now than they were in 1808. They then amounted to 48,000,000 dollars; they only amount to about 100,000,000 dollars now, of which cotton is near two-thirds.'

"In relation to imports, Mr. Benton says, 'After this exposition of our exports under the protective system, it is hardly necessary to trouble the Senate with any detailed view of our imports during the same period. They are obliged to partake of the same character, and such is the fact. They have risen as high as 190,000,000 dollars; they have fallen as low as 64,000,000 dollars; and they have plunged and floundered backwards and forwards at all amounts between these two wide extremes. They are now at about 100,000,000 dollars, which is less than they were at thirty years ago.'

"Mr. Benton next proceeds to his third proposition—that manufacturers were flourishing and prosperous before the late war; and would, under the old system of duties have so continued. To show their standing at the close of his first period of twenty-five years, he refers to the census of 1810; in which, however, he states, many imperfections occur, which induced Congress to pass a joint resolution on the 19th of March, 1812, directing the secretary of the treasury, Mr. Gallatin, to have the returns digested and perfected. For this purpose Mr. Gallatin employed Mr. Tench Coxé, of Philadelphia, an eminent advocate of manufactures and a writer of twenty-seven years' standing. He took two years to verify his statements, and after great labour and care presented them. From his report Mr. Benton read several passages, in which it appears that the manufactures of the United States in 1813, with a population of 8,000,000 amounted to 200,000,000 dollars, advancing at the rate of twenty per cent per annum. Here, says Mr. Benton, 'are two striking facts, that manufactures had been advancing at the rate of twenty per cent, and that they amounted to 200,000,000 dollars in a population of 8,000,000. Population was only advancing at the rate of three per cent per annum; foreign commerce was only increasing at a moderate rate; agriculture was steadily but moderately advancing; but manufactures were going ahead of all other interests, advancing twenty per cent per annum, before protection was invented, and before politicians had taken it into their heads to become their patrons. Mr. Coxé, too, in his report, compares the condition of manufactures at that time, with their condition in England at the nearest approximate period of time in which its population was at the same standard; and the result is, that England proper, in 1787, having a population of 8,500,000, had manufactures, after taking 500 years to bring them to the perfection they then had attained, amounting to 266,000,000 dollars. Here was a striking fact, that manufactures of the United States, under low duties, affording but incidental protection,

within thirty years after the country had achieved its independence, had nearly overtaken England, which required 500 years to reach the same goal. Mr. Coxe's work further proves, that cotton factories were well established and able to stand alone, in 1810, in Rhode Island, Connecticut and Massachusetts; so it was with regard to all other branches of manufactures, with respect to which the statistical details gleaned by Mr. Coxe are most abundant. From his report Mr. Benton quotes very copiously in support of his general proposition. Two passages, in italics, Mr. Benton thinks deserve marked attention. They are as follows:—

"The facility of retaining and steadily extending this valuable branch (the manufacturing) of the national industry, is manifested by its very early and spontaneous commencement in every county and township, and by its nearly spontaneous and costless growth, with such aids only as have not occasioned any material expense or sacrifice to agriculture or commerce, since they were chiefly incidental to necessary revenue, or resulted from our distance from the foreign consumers of our productions and manufactures of our supplies."—Page 50. *"Such are the principal facts which occur to recollection at this time, convincing the benefits to owners and cultivators of the soil, from the manufactures which have arisen unforced in the United States. Their principal protection by duties is incidental. Those duties were imposed to raise the necessary revenue, but greatly favoured the manufactures."*—Page 29, Introduction.

"Such," exclaims Mr. Benton, "were the causes of the growth of manufactures among us. They grew up of themselves, *without the knowledge of politicians, and without any aid from federal legislation*, except the incidental assistance from the imposition of revenue duties. Their growth was natural—without injury to commerce or agriculture—without injury to revenue; and, what is not to be forgotten, not only without a word of discontent or dissatisfaction in any part of the union, but with the absolute approbation of all." Mr. Benton then dwells upon the fact, that Mr. Coxe, *looking to the future, says not one word about a tariff*; the word *tariff*, is not once mentioned in his book. He speaks only of a *safe, cheap, benevolent, and infallible method of promoting manufactures*, by the diffusion of skill, multiplication of machinery, adoption of new improvements, the application of steam-power, the education of the operatives, and the cultivation of good feelings in every part of the union; "but not a word," adds Mr. Benton, "about protective duties and minimums—not a word about the tariff."

"Mr. Benton next adverts to the present condition of manufactures, taking the census of 1840 for reference. He adduces the statistics of products, contrasted with the capital invested in each branch of manufactures, with a view of showing that they are in various instances from 100 to 300 per cent—enormously beyond the yield of products from capital invested in agriculture or other pursuits. He adverts to the large semi-annual dividends, acknowledged by manufacturers under the protective system, and supposes these are not half the reality, if the reserved surpluses were brought to light. He argues that manufacturers are in no need of such enormous protection as the act of 1842 gives them; and that, to persist longer in requiring more than thirty or thirty-three and a third per cent for a maximum, must be suicidal to themselves, as they will rouse the indignation of the mass of the people, who are already aware that they have been 'most magnificently humbugged and bamboozled.' Under the good old system, which he recommends a return to, the manufacturers would thrive as they did in 1810, harmony would prevail, and, above all things, *stability* would be secured to them."

The tariff bill, prepared by the Committee of Ways and Means, was rejected, and the commercial tariff of England was as usual urged as a defence of the tariff of 1842, by the Committee on Manufactures.* We believe, however, that

* "The committee (on Manufactures, 1844) see nothing in the policy of the other nations which would justify us in adopting the delusive theory of free trade. The new tariff of Great Britain, which has been hailed as the harbinger of a commercial millennium, is highly restrictive in its character. It contains many reductions from her old system, but most of them are of but little practical consequence to us. Some articles which were formerly prohibited she now admits,

sound fiscal and commercial views will prevail in the United States, and that a liberal commercial system will be established. The recent report (Dec. 1845) of Mr. Walker, the Secretary of the Treasury (see *Finances of the United States*), appears in support of this belief. The greatest minds in the republic have advocated sound commercial principles: Mr. Calhoun, Mr. Mac Duffie, Mr. Woodbury, Mr. Mackay, Mr. Benton, and many others in and out of Congress; the late Mr. Raguett, and several able writers; and it is remarkable, that many of the latter writers are in the New England states. The freedom of commercial

but on a duty so nearly prohibitory that they cannot be imported, except in extreme cases. Another large class of articles, on which she has made liberal reductions, consists of raw materials used in her manufactures; and such reductions render her policy more protective. On manufactured articles her duties are generally low, for the plain reason that she fears no competition on such fabrics. But when she comes to any article where other nations are in advance of her, she is careful to impose a duty sufficient to protect her own interests. Take silk for example; fearing the competition of France, Italy, &c., she imposes an average duty of about thirty per cent on imported silk, which is much higher, under the circumstances, than we impose on the same article. Our duty on silks will average about thirty-three per cent, being nominally three per cent higher than that of Great Britain. But when we take the situation of the two nations into view, her duty will be found to be much higher in effect—much more protective than ours. Labour and capital, the two great elements which go into all manufactures, are nearly as cheap in Great Britain as on the continent; and in skill she may be considered as their equal. Under these circumstances, a duty of thirty per cent is a high duty. But with us the case is certainly different. Our capital costs one-third more, and our labour nearly three times as much, as they would in France or Italy. This, to all practical purposes, brings our duty on silks down to one-half the rate imposed by Great Britain. In her situation, thirty per cent would be as protective as sixty would be in ours. England has the advantage of us in the cheapness of her labour and capital; and as she is compelled to impose high duties in certain cases, it cannot be thought strange that we find it necessary.

"But what is the free trade that England tenders to us? On what terms does she receive our staples? Why she imposes the following rate of duties upon our products: Salted beef, sixty per cent; bacon, 109 per cent; butter, seventy per cent; Indian corn, average thirty-two per cent; flour, average thirty-two per cent; resin, seventy-six per cent; sperm oil, thirty-three per cent; sperm candles, thirty-three per cent; tobacco, unmanufactured, 1000 per cent; tobacco, manufactured, 1200 per cent; salted pork, thirty-three per cent; soap, 200 per cent; spirits, from grain, 500 per cent; spirits, from molasses, 1600 per cent. On these fourteen articles she imposes an average duty of 355 per cent, a duty vastly greater than we impose upon any of her fabrics. It is idle, therefore, to pretend that she extends to us any thing like free trade.

"Her policy is also seen in the differential duties which she imposes. While Great Britain imposes a duty of 14s. per cwt. upon bacon imported from the United States, she admits it from her own provinces on a duty of 3s. 6d.; and while she imposes a duty of 16s. per barrel upon our beef, she admits beef from her provinces on a duty of 4s. On sperm oil, from our fisheries, she imposes a duty of 15l. per tun, on oil from her colonies 1s. per tun; on our rice she imposes a duty of 6s. per cwt., on rice from her provinces 6d. per cwt. On the products of the forest this principle is still more strikingly illustrated. On oars from the United States, she collects a duty of thirty-six dollars per 120, on the same from her own provinces a duty of ninety cents; on handspikes from the United States nine dollars sixty cents per 120, from her provinces twenty-four cents; on firewood from the United States two dollars forty cents per 216 cubic feet, from her provinces free. These articles will serve, as a specimen, to illustrate the policy of Great Britain; and they show, beyond controversy, that the first object of her tariff is to sustain her own industry and promote her own interests.

"The committee, then, come to the conclusion, after all the examination they have been able to give the subject, that the corn trade with England cannot be relied upon with any degree of certainty. The sliding scale, which we cannot flatter ourselves will be removed, gives the north of Europe a decided advantage over us. When there is an improvement in the English market, the news can be conveyed to Hamburg, &c., in the space of two or three days, and a supply can be forwarded before the price has declined. But with us it is different. Even by the steamers, we do not usually receive intelligence from England until fifteen to twenty days after date; and then an entire month would be necessary before our wheat or flour would reach the English market. In

intercourse, and its influence on morality and civilisation, has never been more beautifully and forcibly illustrated than in the writings of the great Channing.*

There are no bonding warehouses in the United States, and this circumstance adds to the other restrictions of the whole fallacious system of customs duties and regulations, which we have endeavoured to exhibit in greater detail than may have been necessary, were it not important to afford such information as we have been enabled to collect, upon a question so interesting, to the two greatest commercial and maritime states in the world.

If there be one course of policy, more than another, which we would advocate—to which we would devote our labours, in order to aid in obtaining the only certain *guarantee* of peace and of friendship, between two great nations, who, in language and race, are one people—that course of policy is to establish the least possible restrictions on the interchange of the commodities of the one country in the other—upon the arrival at, remaining in, and departure from, of the ships and citizens of America, in every British port and place in the universe—of British ships, and subjects, in every port, and place, within the American regions.

If ever the history of the world presented two states in a position, and condition, to do each other the utmost possible good, or the greatest possible evil—such are the actual positions, and actual conditions, of the United Kingdom and the United States. These constitute subjects of serious consideration for the governments, and for the people, of both England and America.

Awful, indeed, would be the consequence, if those wild or foolish politicians, who, from ignorance, vanity, ambition or with more dangerous and unprincipled designs, would involve the British and American powers in the certain calamities of war, by misguiding the people, and the governments, of both countries. Civilisation in America, and in Europe, would, for the time, be paralysed; and, not only the present generation, but succeeding generations, would suffer, grievously, by an interruption of peace, and intercourse, between the members of a great family:

1841, there were sixty-eight ships laden in whole or in part with grain from the United States to Great Britain; and the average length of the voyages was thirty days. In every point of view in which we can contemplate this subject, we discover nothing to encourage the hope that we may soon find in the English market a demand for our surplus grain at remunerating prices."

* The exhortation of the philanthropic Channing, contains the following beautiful passage, given not long previous to his death: "Allow me to say a word to the merchants of our country on another subject. The time is come when they are particularly called to take yet more generous views of their vocation, and to give commerce a universality as yet unknown. I refer to the juster principles, which are gaining ground on the subject of *free trade*, and to the growing disposition of nations to promote it. Free trade! this is the plain duty and plain interest of the human race. To level all barriers to free exchange; to cut up the system of restriction, root and branch; to open every port on earth to every product; this is the office of enlightened humanity. To this a free nation should especially pledge itself. Freedom of the seas; freedom of harbours; an intercourse of nations, free as the winds; this is not a dream of philanthropists. We are tending towards it, and let us hasten it. Under a wiser and more Christian civilisation, we shall look back on our present restrictions as we do on the swaddling-bonds by which, in darker times, the human body was compressed."

who, though divided as to their governments, are, nevertheless, in spite of their respective prejudices, bound together as one people: by the inseparable union of speaking the same language; of being educated in schools, in which the same lessons are taught,—and trained at firesides, where the mothers instil into their children the same virtues; by reading the same literature; by studying similar laws,—professing, generally, the same religion; by cherishing the same domestic associations; practising, from hereditary and common usage, the same manners; by having, until a very late period, a common history: in short, by inheriting their vices and virtues, and their folly and wisdom in common.

It has been the long, and serious, contemplation of these grave circumstances, which has at all times,—while in America,—and while in Europe, urged, and does, and will, hereafter, urge us to advocate and promote every measure, which materially, morally, and honourably, can strengthen the ties that will bind and maintain, in peaceful harmony, the whole British Empire and the United States of America.

SECTION XVI.

SPANISH AMERICAN REPUBLICS.

CHAPTER I.

SPANISH COLONIAL POLICY.

THE Republics of Mexico and of Central and of South America, exhibit in their political, moral, social, productive, and commercial condition, an extraordinary contrast to the progress and present state of the great Anglo-American Republic.

It was the misfortune of the former, to have been, previously to their independence, ruled, or rather awed into passive obedience, by the most darkening, monarchical and ecclesiastical, government: a government, and hierarchy that grew up, and acquired strength, during centuries of ignorance, tyranny, bigotry, and intolerance: under a government, and a church, that profited not by the march of modern civilisation, and religious liberty; but that enchained the freedom of written, and spoken language, and the expansion of the intellectual faculties.

The history of the Spanish colonies, is not celebrated by examples of that persevering, laborious, and enduring character,—animated, and cherished, and supported by the spirit, and the love, of civil and religious liberty, which so eminently distinguished the Pilgrim Fathers, the Quakers, and even the British Roman Catholics,—who first encountered and overcame all the privations, difficulties, and dangers of the American wilderness.

The character and conduct of the conquerors and colonists of Spanish America, and of their civil and ecclesiastical government ever afterwards, present a contrast, which, on becoming independent of Spanish authority, rendered the moral, intellectual, and even physical character of the people, and of those who were called upon to rule, incompatible with intelligent, tolerant government,—with impartial justice,—and with civil and religious liberty.

The colonial policy of Spain was selfish, intolerant, restrictive, and fallacious, from the foundation of the first settlement, in Hayti, until the expulsion of Spanish power from the continent of America.

This policy excluded all but Spaniards from those regions, and confined the trade to a direct intercourse with Spain. Agriculture was discouraged, in order that Spain might possess the monopoly of supplying with food all the people of the vast territory conquered, by her adventurers, in the West. Spain proved haughty and intolerant; based her commercial and colonial system, on possessing and securing within herself all articles of necessity—all kinds of luxury—all the materials of wealth—all the elements of power. First, by prohibiting the entrance for home consumption of the products of any country, except those of her colonial empire; and secondly, by forcing the latter to consume no manufactured article, and none of food, except those exported from certain ports in Spain. This pernicious legislation was grounded on the specious policy,—that, as all the precious metals would necessarily be transported to the mother country, they would remain in Spain, if they were not required to pay for

foreign commodities; that the precious metals constituted riches; and that wealth constituted power.

But in defiance of this fallacious policy, the gold, silver, and precious stones flowed off to foreign countries, both from the colonies and from Spain, nearly as rapidly as they were robbed from the natives of Hayti, Mexico, and Peru,—or drawn from the mines, by the millions of American and African slaves, who have been exterminated, under the cruel toils to which they were, by avarice and tyranny, doomed.

The effects which resulted from the Spanish conquests, in the islands, and on the continent of America, are remarkable. Into no country did such immense treasures flow as into Spain. In no country was there so little money to be found, either in circulation, or in the royal treasury. There was neither order nor economy in the finances of the government, nor in the expenditure of individuals. Money was borrowed at usury. Gold and silver, which the galleons brought annually to Cadiz from the New World, did not suffice to pay the debts which Spain owed in the Old. Agriculture, at home and in the colonies, was despised and neglected. Other branches of industry decayed, and several disappeared altogether. The Indies, instead of strengthening the power of Spain, rendered that monarchy gradually impotent in Europe. This poverty and weakness was chiefly caused by the genius of the Spanish policy. In order to retain conquests, the natives were exterminated. The spirit of government was tyranny,—the doctrine of the church was persecution,—the maxim of trade was monopoly. The long duration of those fallacies, rendered them, in Spanish wisdom, venerable. The Spaniards, believed the precious treasures of the New World exhaustless. They imagined their power invincible. Their ambition and pride measured no limits. The consequent wars in Europe, and the retention of the Indies, diminished the number of inhabitants,—and demoralised the remaining population. The country became exhausted, by its decreased powers of production at home, and by the plunder of its fleets by the enemy. The Spanish troops were ever brave,—yet they were ill paid, badly fed, and wretchedly clothed. They were skilfully disciplined, and gallantly commanded,—but they were generally defeated. The people of the united provinces—a mere fragment of Spanish dominion, a marsh, a debris of river deposits, and sea sand, assumed and effected independence,—and constructed fleets, which swept those of their former tyrants from off the ocean. Spain, by insulting, roused and organised the power of other nations. Of England and France, Spain was especially jealous. England, and afterwards Holland, became her most formidable naval rivals. The precious metals of America enervated the Spaniards. The spirit of industry, trade, and navigation rendered the English and Dutch active, hardy, bold, and victorious.

The enterprising Anglo-Saxon colonists, who planted the New England and middle provinces of North America, were not slow in discovering profitable channels of commerce; and they soon commenced a very lucrative contraband trade with the Spanish settlements in Cuba, Mexico, and South America. It rapidly increased to a prodigious value and certain gain, by the interchange of all sorts of British manufactures for the precious metals and gems. These were nearly all remitted to England. A small part only was retained for a currency in the British plantations. The Spanish colonists gave all possible, illicit, encouragement to a commerce, which supplied them with the best articles, at half the price that were paid for those of the parent country. The Spanish colonial authorities contrived to share in the profits, and connived at a trade, which was undermining the whole commercial and colonial policy of Spain.

The Spanish monarchy, at length, to suppress this commerce, stationed a

fleet of *guarda-costas* along the shores of Cuba, Porto-Rico, and the Gulf of Mexico. The indiscriminate seizure of all British vessels, met with near those coasts, was the chief cause of the war of 1734 between Great Britain and Spain.

After the war, the contraband trade with the Spanish settlements was resumed with activity by the Anglo-American colonists, until the English government agreed to assist Spain in effectually suppressing it. British war-cruisers were directed to seize, in order to be confiscated, all British merchant vessels found near the shores of the Spanish colonies. The avidity and severity of the commanders of these cruisers nearly destroyed the trade, and formed one of the great causes of discontent which led to the American revolution. After the independence of the United States, the contraband trade with the Spanish colonies was resumed, and continued with extraordinary activity and success, both from the continental ports of Anglo-America, and from the Bermudas, Bahamas, and other places, until the year 1809, when the Spanish West Indian and American ports were, by necessity, in consequence of the peninsular war, opened to foreign trade. But, while we are compelled to expose the pernicious effects of the colonial system acted upon by Spain, the unwise commercial policy, and the previous legislative acts, of England, before the independence of the British Provinces, and afterwards, until the opening the ports of the Spanish colonies, will not admit of justification.

By the treaty between Great Britain and Spain, signed at Madrid, 13th (23d) May, 1667, it was provided that, perfect reciprocity of navigation and trade should be established between the King of Great Britain and the King of Spain, and their respective people, subjects and inhabitants. These privileges are stipulated for, in the fullest manner, both as to subjects, merchandise, and the duties to be paid.* These privileges extend to all dominions, including colonies and islands; but, as Great Britain and Spain both restricted the trade of their colonies to the mother country of each, it was stipulated, that the immunities and privileges, provided for in the treaty of 1667, were not to extend to the colonies, unless such intercourse should be at any future time allowed to the ships and subjects of any other foreign state. The treaties of peace and of friendship signed at Utrecht, between Great Britain and Spain, 2d (13th) of July, 1713, provided, that all privileges of trade and navigation, which should be enjoyed or granted, by either contracting power to the subjects of any other foreign state, should also be enjoyed in all the ports and dominions of the Kings of England and Spain, by their respective subjects.

All the foregoing treaties were renewed by the treaty of Versailles, 1783, and by the treaty of 5th of July, 1814. Both England and Spain have generally observed the faith of these treaties, and the wines of Spain, and of the Two Sicilies under Spain, have been treated upon their importation into England upon the same terms, as to duty, as those of Portugal under the Methuen treaty; while those of France and Germany continued to be subjected to a high differential duty. Any breach of faith, in regard to these treaties, will be found attributable to the frequent wars between the two countries,—to misinterpretations put on their provisions by the custom-house authorities in Great Britain and Spain, and to the suddenly disturbed administrations of the latter, which resulted, generally, in power being held by those who were ignorant both of commerce and of commercial treaties; and of whose neglect it would be not only unworthy, but dishonourable in a great nation to take advantage.

Although the ports of Spain, in the West Indies, and America, were opened to foreign trade in 1809, the old system of monopoly would have probably been

* See Articles 4, 5, 6, 7, 8, 10, and 11; and 38th of the Treaty of 1667.

† See Article of Treaty of 1670. See Treaty of Utrecht, 1713.

renewed, at the peace, had not Spanish trade and industry been thoroughly paralysed before the year 1814. When the Spanish American republics achieved their independence of Spanish monarchical rule, the leading men, and the whole people, were not only ignorant of the true principles of trade and industry, but they retained, by tradition, and by habit, an hereditary attachment to all that was unsound in the old Spanish colonial policy, and to all that was bigoted in the church. This was especially true in regard to Mexico: and to this ignorance, and to this intolerance, may we assuredly ascribe the impotent condition of that naturally rich, and still extensive, republic.

If we compare the natural fertility, and numerous advantages of the countries in America, discovered, conquered, and planted, by Spain and Portugal, and compare their present population, condition, and power, with those discovered, conquered, and colonised by the Anglo-Americans, we may form something like a conception of what would have been, at this day, the productive riches, and the internal, and external commerce, and navigation of Mexico, of Guatemala, of Brazil, and of the several republics of Spanish America, had they been colonised by a race animated and conducted by the same spirit, habits, industry, intelligence, and invention, which in agriculture, in the arts, in navigation, and in commerce, have distinguished the Anglo-Saxon race.

We have collected and condensed, with great labour, care, and expense materials in order to enable us to present to the public, the commercial and industrial statistics of the Spanish and Portuguese settlements in America. Our manuscripts, statements, and tables, would form many volumes in print. But such has been the vacillating legislation of those governments, that we are compelled to make but scanty use of those statements, and tables, and we shall confine our statistical accounts of these countries to such information only as we consider the most accurate, and most useful to manufacturers, merchants, and ship-owners.

CHAPTER II.

DIVISIONS OF SPANISH AMERICA UNDER THE MONARCHY.

PREVIOUSLY to the independence of the countries, in North and South America, comprised under the regal government of Spain, the Spanish colonies were administered in the following arrangement: viz,—

- 1.—In NORTH AMERICA—The *Viceroyalty of New Spain*, and the *Captain-generalship of Guatemala*.
- 2.—In SOUTH AMERICA, the *Viceroyalty of New Granada*, the *Captain-generalship of Caraccas*, the *Viceroyalty of Peru*, the *Viceroyalty of La Plata*, or *Buenos Ayres*, and the *Captain-generalship of Chili*.

The population of these vast regions, we believe never to have been, even as an approximate statement, ascertained. The following table is compiled on the authority of Humboldt, Alcedo, and others; and is estimated to include the natives and slaves:—

COUNTRIES.	Inhabitants.	Acres.	CAPITALS.	Inhabitants.
	number.	number.		number.
New Spain.....	6,500,000	1,000,000	Mexico.....	137,000
Guatemala.....	1,200,000	186,000	Guatemala.....	19,000
Cuba.....	600,000	43,350	Havannah.....	35,000
Puerto Rico.....	136,000	3,865	Puerto Rico.....	very populous.
New Grenada.....	1,800,000	Santa Fé de Bogota.....	30,000
Caraccas.....	900,000	Caraccas.....	20,000
Peru.....	1,800,000	3,350,000	Lima.....	54,000
Chili.....	800,000	Santiago.....	36,000
Buenos Ayres or La Plata..	1,100,000	Buenos Ayres.....	60,000
Making.....	14,336,000	5,273,215		

The above is exclusive of the unnumbered Indians of the Viceroyalty of La Plata. The Portuguese subjects in Brazil were estimated at the same time, to amount to 3,000,000: of whom one million and a half were slaves, one million Indians, and the remainder of European race.

Of the above total of 14,336,000 souls, there were 3,000,000 whites born in the country, 200,000 Europeans, and the remaining 11,136,000 were Indians, negroes, and mixed races, or castes, of which the Indians amounted to by far the greater proportion. The negroes in Caraccas amounted to 54,000, in Cuba to 212,000; the other states having comparatively very few slaves.

I.—VICEROYALTY OF NEW SPAIN.

Under the Viceroy, and the Supreme Councils (*Audencias Reales*), New Spain was sub-divided into the three Provinces of *New Mexico*, and *Old and New California*, and the twelve intendencies of *Durango*, or *New Biscay*, *Sonora*, *St. Louis Potosi*, *Zacatecas*, *Guadalarara*, *Valadolid*, or *Mechoucan*, *Mexico*, *Puebla*, or *Tlascala*, *Vera Cruz*, *Oaxaca*, or *Guazaca*, and *Merida*, or *Yucatan*.

The whole administration may be said to have been under the absolute despotism of the viceroy, the archbishop, and bishops, and the *Audencias Reales*.

II.—CAPTAIN-GENERALSHIP OF GUATEMALA.

The account which, in its spirit, and in the simplicity of its description and statements, conveys the best proof of authenticity relative to this captain-generalship, under the Spanish sovereignty, is the work of Don Domingo Quaras, a native of the country. According to his authority, the government of this kingdom, as it was then named, was administered by the royal audiencia of Guatemala, the president of which was governor and captain-general of the kingdom, having a great number of inferior officers for the better regulation of the provinces. The spiritual affairs were directed by the Archbishop of Guatemala and three suffragans, except in the small district of Peten, which was under the charge of the Bishop of Yucatan. The ecclesiastical division of the kingdom consisted of four bishoprics, viz., Guatemala, which as metropolitan, extended over the whole kingdom; but the peculiar territory of the archbishopric of Guatemala extended 214 Spanish leagues from the plains of Motocinta, the most westerly village of the diocese, to the boundaries of the curacy of Conchagua, the most easterly; and 116 leagues from the Gulf on the northward, to the shores of the Pacific southward. In this district there were 108 curacies, twenty-three collated curacies of regulars, sixteen under charge of the Dominicans, four of the Franciscans, and three of our Lady of Mercy; 424 parochial churches, and 539,765 inhabitants. This bishopric was erected by Pope Paul III., under a bull bearing date December 18, 1534; from that period to 1809 the chair has been occupied by seven archbishops and sixteen bishops. The second bishopric is Leon, having jurisdiction over the intendancy of Nicaragua, and the government of Costa Rica: in it there were thirty-nine

curacies, three establishments for the conversion of infidels, eighty-eight parochial churches, and 131,932 inhabitants. From its erection to the year 1809, this diocese has had thirty-seven bishops. The third was Ciudad Real, its jurisdiction comprehended the three divisions of the intendency of Chiapa; it contained thirty-eight curacies, 102 parish churches, and 69,253 inhabitants. The fourth is Comayagua, the jurisdiction of which was confined to the intendency of Honduras: within its territory there were thirty-five curacies, one establishment for the conversion of infidels, 145 parish churches, and 88,143 inhabitants.*

The civil government of the kingdom was divided into fifteen provinces, of these eight were superior *alcaldias*, viz., Totonicapan, Sololá, Chimaltenango, Sacatepeques, Zonzonate, Verapaz, Escuintla, and Suchiltepeques; two were corregidorships, viz., Quezaltenango, and Chiquimula; one a government, Costa Rica; and four were intendancies, Leon, Ciudad Real, Comayagua, and St. Salvador. Five of these provinces were situated on the shores of the Pacific; five on the Atlantic, and five interior.

In Guatemala, as well as in all other parts of Spanish America, the real power exercised by the bishops and other ecclesiastics, was much greater than that exercised by the civil government.

III.—VICEROYALTY OF NEW GRANADA.

New Granada was bounded on the north by the Caribbean Sea, and the province of Costa Rica in the kingdom of Guatemala; on the east by the government of Caraccas, Spanish Guiana, and Portuguese Guiana; on the west by the Pacific Ocean; and on the south by the river Marañon, and the viceroyalty of Peru: it extended from 3 deg. 30 min. south latitude, to 12 deg. north latitude.

This extensive viceroyalty was divided into numerous provinces, governed by intendants and governors under the orders of the viceroy.

These provinces were named Jaen de Bracamoros, Quixos, Maynas, Quito, Tacamees, Popayan, Antioquia, Santa Fé, San Juan de los Llanos, Merida, Santa Marta, Carthagená, Choco, Darien, Panama, and Veragua; the three last of which were known by the distinctive appellation of *Tierra Firme*.

IV.—CAPTAIN-GENERALSHIP OF CARACCAS.

Caraccas is named after a tribe of Indians, and given to the country which included New Andalusia, or Cumana, with Margarita, Barcelona, Venezuela or Caraccas Proper, Maracaybo and Coro, on the coast of the Caribbean Sea, Varinas and Spanish Guiana, in the interior.

It was bounded on the north by the Caribbean Sea, east by the Atlantic, south by Peru and Dutch Guiana, and west by the kingdom of Santa Fé or New Granada.

Caraccas was subdivided into seven provinces: viz., New Andalusia or Cumana, Barcelona, Venezuela or Caraccas Proper, containing Venezuela and Coro, Maracaybo, Varinas, and Guiana, with the detached government of the

* In computing the number of inhabitants of the kingdom: parishioners of the dioceses, and inhabitants of the provinces, recourse has been had to the census taken by order of the King of Spain in 1788, as being the most recent and complete that could readily be consulted, because it gives the numbers in the separate provinces and districts. It may, however, be considered too low; for, by comparing it with the enumerations made by order of the bishops, there has been found a material discrepancy; if we add together the numbers of the different districts of the bishopric of Comayagua in the royal census of 1778, the amount will be no more than 81,143; whereas, that taken by order of the bishop in 1791, makes the number 93,501. In Chiapa, in 1778, the number given was 62,253, but, by a census in 1796, it was 99,001: similar increase has been perceived in the other two dioceses.—*Alcedo*.

island of Margarita; the whole of these were under the superintendence of a personage of the highest rank, who was styled captain-general of the provinces of Venezuela, and the city of Caraccas.

V.—VICEROYALTY OF PERU.

Peru, as a viceroyalty, was bounded on the north by the southern provinces of Quito, Maynas, Jaen de Bracomaros, and Guyaquil; on the west by the Pacific Ocean; on the east, by the Portuguese possessions, and the provinces of Buenos Ayres; and on the south, by the government of Chili and the viceroyalty of La Plata. It was formerly the most extensive kingdom of South America, but in the year 1718 the provinces of Quito in the north, as far as the river Tumbez, were annexed to the government of New Granada, and in 1778, Potosi, and several other of its richest districts, on the east, were annexed to the viceroyalty of Buenos Ayres. It extended, therefore, from the Rio Tumbez, in 3 degrees 30 minutes, south latitude, to the chain of Vilcanota, in 15 degrees south latitude.

Its eastern settlements bounded on Colonna, or the land of the missions, the Pampas del Sacramento, and the region of the savage nations of the Pajonal, a vast steppe covered with long grass.

Peru was, as a viceroyalty, divided into seven intendancies, viz.—Truxillo, Tarma, Huancavelica, Lima, Huamanga, Arequipa and Cuzco, each of which was governed by an intendant, nominated by the viceroy, a nobleman of the highest rank, who was sent from Spain, and whose appointment was one of the first consequence in Spanish America.

The salary of the viceroy was only 12,600*l.*, but enormously augmented by the monopoly of certain manufactures, by grants, and by the colonial situations and titles he could confer.

Peru was the seat of two royal audiencias, that of Lima and that of Cuzco. The audience of Lima was established in 1543, and was composed of a regent, eight oidores or judges, four alcaldes, and two fiscals, the viceroy being president. It was divided into three chambers, and was the superior court of appeal for the whole government. The royal treasury was the next great office of state, composed of the viceroy, the regent of the council, the dean of the tribunal of accounts, and other officers, and the revenue appeals were determined by the tribunal of accounts.

VI.—VICEROYALTY OF BUENOS AYRES, OR LA PLATA.

This viceroyalty was bounded on the north by the vast steppe of the Amazons, or, according to some authorities, by that great river itself; on the east the territories of the Portuguese and the Atlantic ocean were its limits; on the west it was divided by the Andes from Peru and Chili, having also a province bordering on the South Sea; and on the south its boundary was the Pampas and Patagonia.

From Cape Lobos on the Atlantic to the most northerly settlements on the Paraguay, its extent was estimated at 1600 miles; and from Cape St. Antony, at the mouth of the Plata, to the Andes of Chili, its breadth was about 1000 miles.

This extensive region was erected into a viceroyalty in 1778; and at that time several provinces were added to it from Peru and Chili. It was divided into five governments, Los Charcas, Paraguay, Tucuman, Cuyo, and Buenos Ayres, which were again subdivided into departments and districts.

The whole was governed by a viceroy, and the ecclesiastical affairs of the country were under the guidance of the archbishop of La Plata, in Charcas, who had six suffragans.

VII.—CAPTAIN-GENERALSHIP OF CHILI.

The kingdom of Chili or Chilé was the most southerly of the governments. which composed the Spanish American empire.

It extended from the 24th degree to the 45th degree of south latitude, and comprised the continent bounded by the ocean on the west, and the Andes on the east; with the islands on its coasts. Its greatest length was about 1260 miles, and its greatest breadth 300.

It was bounded on the north by La Plata, and from Peru it was separated by the desert and province of Atacama; on the east it was bounded by the Buenos Ayrean provinces of Tucuman and Cuyo, and by Terra Magellanica, or Patagonia; on the west, the Southern Pacific washed its shores; and on the south, the unconquered and desert countries of Terra Magellanica, completed its limits.

Chili was governed by a personage of high rank, appointed by the court of Madrid, and who held the title of Captain-General of the kingdom of Chili, having under his orders all the inferior governors of departments and military posts. He was likewise commander-in-chief of the Chilian forces, and president of the court of the royal audiencia of Santiago.

Chili was divided into continental and insular partidos, or departments, over which intendants, or lieutenants, presided.

The continental part, or Chili Proper, was divided into thirteen partidos, which extend from the twenty-fourth degree to the thirty-seventh degree of south latitude, and were named Copiapo, Coquimbo, Quillota, Aconcagua, Melipilla, Santiago, Rancagua, Colchagua, Maule, Itata, Chillan, Puchucay, and Huilquilemu. From the thirty-seventh degree to the islands of Chiloe, the country was chiefly under the power of three native tribes, the Araucanians, the Cunches, and the Huilliches.

Insular Chili, comprehending the archipelago of Chiloe, and Chonos or Guaytecas, and the Andean parts of Chili were inhabited by independent tribes.

CHAPTER III.

SPANISH AMERICAN REPUBLICS.

ALL the power of Spain has disappeared in continental America and we have now to refer to its subdivisions as republican governments.

POPULATION of each, as stated in the American Almanac for 1845.

COUNTRIES.	Popula- tion.	CAPITALS.	COUNTRIES.	Popula- tion.	CAPITALS.
SPANISH REPUBLICS OF NORTH AMERICA.	number.		Spanish Republics of S. America (cont.)	number.	
Mexico.....	*7,044,140	Mexico.	Bolivia.....	1,500,000	Chuquisaca.
Central America.....	2,000,000	San Salvador.	Chili.....	1,500,000	Santiago.
Yucatan.....	580,948	Merida.	Venezuela.....	900,000	Caraccas.
Haiti.....	633,000	Cape Haytien.	Equator.....	600,000	Quito.
Texas.....	250,000	Austin.	Isthmus of Panama.....	Panama.
SPANISH REPUBLICS OF SOUTH AMERICA.			Paraguay.....	300,000	Assumption.
Argentine Republic....	2,000,000	Buenos Ayres.	Uruguay.....	150,000	Monte Video.
Peru.....	1,700,000	Lima.			
New Grenada.....	1,931,684	Bogotá.	EMPIRE.		
			Brazil.....	5,130,418	Rio Janeiro.

* According to the census prepared in 1841, by the Mexican "National Institute of Geography and Statistics. But this number includes Yucatan and Texas.—See Statistics hereafter.

The above must be considered as little more than approximate estimates.

CHAPTER IV.

MEXICO.

DESCRIPTION AND NATURAL RESOURCES.

IF the population, and productive industry, and the commerce of Mexico were commensurate with its natural fertility, and with the extent of the earth's surface which it comprises, it would have been before the present time one of the wealthiest and most powerful states of the world.

The united states, or federal republic of Mexico lies between 15 deg. and 42 deg. north latitude; the most southern limit being near Port Angelos (15 deg. 10 min. north latitude) and the most northern near Cape St. Sebastian. The most eastern point is on the shore of the peninsula of Yucatan, near the island of Cancun, which extends to near 86 deg. 48 min. west longitude; and the most western point is Cape Mendocino, in 124 deg. 40 min. west longitude. Yucatan, however, although nominally one of the federal states, is, *de facto*, an independent government.

On the west and south, Mexico is bounded by the Pacific Ocean; and on the east by the Gulf of Mexico. Its south-eastern angle borders on central America, and the British settlement of Belize. Between Mexico and Central America, the boundary-line is not exactly known, further than that it commences somewhere near the Barra de Tonato, thence north to the volcanic region of Soconusco, and thence irregularly over the slopes of the table-land of Guatemala to the Rio Usumasinta; it then follows the western side of the elevated country of Yucatan, somewhat south of 18 deg. north latitude to the Rio Hondo, which as far as the sea, is considered the boundary between Yucatan and Belize.

On the north, and partly on the east, Mexico borders on the United States of North America. The northern boundary-line commences on the Pacific in 42 deg. north latitude and runs along that parallel to the Rocky Mountains; on the east of which range, before the independence of Texas, it followed the course of the Arkansas river to the 100th meridian, thence due south to the Red River, which it followed as a boundary as far as 94 deg. west longitude, and then the line ran due south to the River Sabina, and along that river to the Gulf.

From the boundary of Guatemala to 42 deg. north latitude, Mexico is about 2400 miles in length. Its breadth varies greatly. At the Isthmus of Tehuantepec, where it is narrowest, the distance is little more than 130 miles across. Its greatest width, when it included Texas, was near 32 deg. north latitude, whence it extended about 1230 miles from the Rio Sabina to Upper California. By the annexation of Texas to the United States of North America, this breadth is reduced to the distance between the Rocky Mountains bounding New Mexico, and the United States, in latitude 42 deg. north, and longitude 109 deg. 45 min. west, and Cape Mendocino, in latitude 40 deg. 30 min. north, and longitude 124 deg. 10 min. west, or about 700 miles.

Our accounts of Mexico are far from being complete. The country has been so imperfectly explored,—that it is even asserted that there are within it independent nations, living in large towns, which are only known by report. Our brief descriptions are necessarily confined to the districts which have been settled or travelled over: but we have adhered to what appeared to us the best Spanish, English, and American accounts; not only of Mexico but of the other Spanish American republics. Our most authentic

recent accounts, excepting the work of M. Chevalier, are all written by citizens of the United States. We have but little information that can be relied on, by British travellers in Mexico, with the exception of the valuable and comprehensive work of Mr. Ward,—who resided in the country as minister, after its independence of Spain, in 1826. The citizens of the United States have exclusively, since 1840, acquired a more accurate knowledge of the Mexican territories, especially of the northern parts, than ever was known before, unless it were formerly by the Jesuits, and the ecclesiastics of the Indian missions.

The works of Clavigero, Alcedo, Humboldt, and Ward, are the usual authorities in describing Mexico. The work of Latrobe, and the notes of Poinsett; are also referred to. The most recent accounts upon which we can rely as to the present state of Mexico, and the best local descriptions, are found in the work of Mr. Brantz Mayer, who was Secretary to the United States Legation at Mexico, in 1841 and 1842; of New Spain or Northern Mexico, in Mr. Gregg's work on the "Commerce of the Prairies and Santa Fé; and of California, in that admirable work, "The Account of the United States Exploring Expedition, under the Command of Captain Wilkes;" and of California, in the "Narrative of the Exploring Expedition, in the Years 1842, 1843, and 1844, under Captain Fremont, of the Topographical Engineers, to the Rocky Mountains, Oregon, and North California;" from each of these works, we have extracted and condensed the most instructive information, relative to a country to which great interest must in future be directed. Of many parts there is certainly little known; but we have more certain accounts, through the indefatigable perseverance of Anglo-American travellers, of the towns and districts through which the old Spanish roads and routes passed, and of California and Northern Mexico, than we possess of other parts of Spanish or Portuguese America.*

CHAPTER V.

TERRITORY.—POPULATION AND DEPARTMENTS.

ACCORDING to the best authorities, the territory of the Mexican republic contains an area of 1,650,000 square miles, exclusive of Texas: and the area of the United States of Anglo-America may, exclusive of Texas, be estimated at 2,300,000. "If we allow," says Mr. Mayer,† "that the square mile will maintain, under ordinary careful cultivation, a population of 200 persons, we shall have the sum of 330,000,000 for the total ultimate capability of the Mexican soil, and 460,000,000 for the United States.—or, 130,000,000 less in Mexico than in our union."

In 1792, according to a report made to the King of Spain by Conde de

* We have just received a recently-published Journal of Travels in Mexico, by Mr. Gilliam, who had been appointed United States consul in California, to which he does not appear to have proceeded further than to the neighbourhood of the Gulf. This book appears, when confined to mere detail, to contain truthful accounts of the places and people he met with. But the style is ludicrous, inflated, and abounds in, not *Yankeeisms*, but in painful attempts to write sentiments composed of superlative adjectives.

† Mexico. By Brantz Mayer, Secretary of the United States Legation to that country in 1841 and 1842.

Revellagigedo, the population of New Spain, exclusive of the Intendencies of Vera Cruz and Guadalupe, was as follows:—

CASTES AND CLASSES.	Population.	CASTES AND CLASSES.	Population.
	number.		number.
Indians.....	2,319,741	Total brought forward.....	4,483,529
Europeans.....	7,904	To which may be added the population of	
White creoles.....	677,458	Vera Cruz and Guadalupe, according	
Different castes.....	1,478,126	to the estimate of 1803.....	786,500
Total.....	4,483,529	Total population, in 1793.....	5,270,029

The Baron Humboldt estimates the population to have been, in the year 1803, 5,837,100; and Mr. Poinsett, in 1824 (from the best data of the period), 6,500,000.

In 1830, Mr. Burkhardt, a German traveller, rates the several classes of Mexicans, thus:—

CASTES AND CLASSES.	Population.	CASTES AND CLASSES.	Population.
	number.		number.
Indians.....	4,500,000	Brought forward.....	5,506,000
Whites.....	1,000,000	Mestizos, and other castes.....	2,490,000
Negroes.....	6,000	Total.....	7,996,000
Carried forward.....	5,506,000		

The most accurate of the recent calculations, is said to be the one which was made by the government without special enumeration, as a basis for assembling a Congress to form a new constitution, similar to the plan of that adopted in Tacubaya in 1842:—

DEPARTMENTS.	Population.	DEPARTMENTS.	Population.
	number.		number.
Mexico.....	1,380,520	Brought forward.....	5,973,484
Jalisco.....	670,311	Sinaloa.....	147,000
Puebla.....	661,902	Chiapas.....	141,208
Yucatan.....	580,948	Sonora.....	124,000
Guatemala.....	512,008	Queretaro.....	129,560
Oaxaca.....	500,278	Nuevo Leon.....	101,108
Michoacan.....	497,906	Tamaulipas.....	100,068
San Luis Potosi.....	321,840	Coahuila.....	75,340
Zacatecas.....	273,575	Agua Calientes.....	69,098
Vera Cruz.....	254,380	Tabasco.....	63,580
Durango.....	162,618	Nuevo Mexico.....	57,926
Chihuahua.....	147,600	Californias.....	33,439
Carried forward.....	5,973,484	Total, in 1842.....	7,015,509

Mr. Mayer states that "since the year 1830, the population of the republic has been dreadfully ravaged by smallpox, measles, and cholera. In the capital alone, it is estimated that about 5000 died of the first-named of these diseases, 2000 of the second, and from 15,000 to 20,000 of the third. The mortality must have been in a corresponding ratio throughout the territory.

"I am, however, by no means satisfied that the estimates of both Poinsett and Burkhardt are not too high; yet, assuming the statements of 1842 and of 1793 to be nearly accurate, we find in forty-nine years an increase of only 1,774,111 in the entire population. Again, if we assume the population to have been 6,000,000 in 1824, (the year, in fact, of the establishment of the republic,) we find that, in the course of eighteen years of liberty and independence, the increase has not been greater than 1,044,140.

"In the United States of America, with only 650,000 more of square miles of territory now, and not so large a space at the achievement of our independence, the increase of our population during the first twenty years of freedom cannot have been less than two millions and a half; while, in the course of the last thirty years, it has averaged an increase of rather more than thirty-three per cent, every ten.

"The several castes and classes of Mexicans may be rated in the following manner:—

CASTES AND CLASSES.	Population.	CASTES AND CLASSES.	Population.
	number.		number.
Indians.....	4,000,000	Brought forward.....	5,006,000
Whites.....	1,000,000	All other castes, such as zambos, mestizos,	
Negroes.....	6,000	mulattoes, &c.....	2,009,509
Carried forward.....	5,006,000	Total.....	7,015,509

"It appears, therefore, that the Indians and negroes amount to 4,006,000, and the whites, and all other castes, to 3,009,509. A very respectable and aged resident of Mexico, who is remarkable for the extent and accuracy of his observations, estimates that, of the former, (or negroes and Indians,) but two per cent can read and write; while of the latter, at a liberal estimate, but about twenty per cent.

"If we take this computation to be correct, as I believe from my own observation it is, and using the estimate of the decree of 1842 for the basis of the population, we shall have:—

CASTES AND CLASSES.	Population.
	number.
Of Indians and negroes who can read.....	80,120
Of whites and all others.....	607,628
Total able to read and write out of a population of 7,000,000.....	687,748

"This would appear to be a startling fact in a republic the basis of whose safety is the capacity of the people for an intellectual self-government. Let us, however, carry this calculation a little further. If we suppose that out of the 1,000,000 of *whites*, 500,000, or the half only, are *males*, and of that 500,000, but twenty per cent., or but 100,000 can read and write, we will no longer be surprised that a population of more than 7,000,000 has been hitherto controlled by a handful of men; or that, with the small means of improvement afforded to the few who can read, the selfish natures of the superior classes, who wield the physical and intellectual forces of the nation, have forced the masses to become little more than the slaves of those whose wit gives them the talent of control."—*Mayer's Mexico*.

CHAPTER VI.

CONFIGURATION, SOIL, AND CLIMATE.

THE configuration, soil, surface, and climate of Mexico, comprehend every variation of character. Low and unhealthy lands, along many parts of the sea-coast, especially the low plain of Cuétlactlan, facing the Gulf, along the shores of which sandhills frequently rise. Low lands form only exceptions along the Pacific; and occur at the Bay of Tehuantepec, and at Acapulco; but generally the mountain or table-land approaches the shores of the Pacific and of the southern part of the Gulf of California.

The peninsula of YUCATAN, is one of the provinces or states of Mexico, but politically, as well as physically, almost independent of the Mexican republican government. This state is surrounded on three sides by the sea, the Gulf of Guanajos, or of Honduras, and the Gulf of Mexico. It is bounded on the south by the former province and *alcaldia mayor* of Vera Paz, and on the south-west by Chiapa, and by about 250 miles of Tabasco. It lies between the latitudes 18 deg. and 21 deg. north, and longitudes 87 deg. and 91 deg. west. Its length is about 250 miles from south-west to north-east, and its breadth is about 200 miles from east to west at the widest part. Alcedo describes its climate as—

"A very hot and moist temperature. Its territory is for the most part stony, but fertile. It has no other river throughout the whole of it than that of Jagartos, which is, however, very abundant. (This is not true, several small rivers flow through parts of the state.) It is argued that it has many subterraneous waters, and this is pretty well proved, through certain deep chasms of stone, which they call *zenotes*, and in which water has been seen to run.

"The land is plain, covered with shady trees, and abounding in honey, wax, and cotton, and of the latter they make spun and woven stuffs, which they die of various colours, and which are highly esteemed in all Nueva Espana. It also produces some cochineal, and from the above productions, as well as from some Campeche-wood, and some rigging, which they manufacture, do they maintain a commerce. In its forests are excellent sorts of woods, of which some ships have been built; and one sort of these goods, called *habin*, is so hard that it is impossible to drive a nail into it without first boring a hole. Here are many wild beasts, such as tigers and leopards; also snakes and venomous insects, and a species of spider, which the Indians call *ham*, since, whenever a person is bitten by it, the excruciating pain he suffers causes him to cry out this word, and this he continues doing till he dies, no remedy ever having been found against its fatal influence. Both sheep and neat cattle are scarce in this province, through want of water and pastures; but here are abundance of swine, as well as of all kinds of fruit of a warm climate. On the sea coasts is found much amber."

The recently explored ancient ruins are remarkable. (See Mr. Stephen's work.) Mr. Ward considers Yucatan the most sterile and poor state in the confederation. We have no recent account upon which we can place much reliance, and our consular returns (See trade of Mexico hereafter) convey little information relative to Yucatan, a country which may, to a great extent, be considered a wilderness. We believe that portions of this state are susceptible of the most productive tropical cultivation.

TABASCO, which has been politically united to the Mexican republic, but which is but little more than nominally annexed, adjoins on the east Yucatan, and on the south Chiapa, and the kingdom of Guatemala; from whence it is separated by a *cordillera*, or *serrania* of mountains: on the west it is bounded by the province of Oaxaca, in Nueva Espana, and it fronts the Gulf on the north. It is about 180 miles long, and about 60 broad. Alcedo describes it as—

"Of a hot and moist temperature, and the territory is low and plain, but very full of woods in which there are abundance of cedars, brazil, and many other sorts of woods. The country is unhealthy from the abundance of rain, and the prevalence of strong winds, which last for nine months together; but it is very fertile in fruits of the country, such as *mameyes*, *zapotes*, *aguacates*, *quaybas*, and many others of a delicate taste, as also in European productions.

"It produces much maize, of which there are three or four crops annually; rice and cocons, which are sent for sale to Vera Cruz; pulse, garden and many medicinal herbs, tobacco, and, above all, *cacao*, this being the most abundant production of any, and that which is the greatest source of commerce; it being also in this that the natives used to pay their tribute to the Emperors of Mexico. It is not less abundant in pepper, which is much esteemed, and of which great quantities are carried to all parts, although of inferior quality to the pepper of the east. The breed of cattle, of all species, has increased greatly in this country; and in the woods there are leopards, *dantas*, small boars, rabbits, deer, monkeys, squirrels, *tapeyes*, *quintes*, similar to stags but smaller; and very many birds, such as pheasants, parrots, quails, hens, pigeons, doves, and an infinite number of others, large and small. Although the cotton-tree be here in abundance the fruit is made no use of, since it is eaten by the monkeys before it ripens, as also by the squirrels, and other small animals, with which the country is overrun. But all these plagues are less obnoxious than the mosquitoes, of different kinds, which will scarce suffer men to exist; for no one can sleep except covered by a canopy, the heat caused by which is intense.

"This province is watered by different rivers, which fertilise it; but the most considerable is that of its name. The capital is the settlement of the same name, called also De Nuestra Senora de la Victoria."

TABASCO ISLAND, or rather a neck of land, lies in the south-west part of the Gulf of Mexico, and at the bottom of the Gulf of Campeachy: on it is built the town of Tabasco, in latitude 18 deg. 34 min. north, and longitude 93 deg. 36 min. west. Alcedo says:—

"It is the capital of a province of the same name, and is situate at the mouth of the river Grijalva, seventy-six miles east of Santa Ana, and 127 miles east-south-east of Vera Cruz. It was considerably enriched by a constant resort of merchants and tradesmen at Christmas. The river Grijalva divides itself near the sea into two branches, of which the western falls into the river Tabasco, which rises in the mountains of Chiapa, and the other continues its course till within four leagues of the sea, where it subdivides and separates the island from the continent. Near it are plains, which abound with cattle and other animals, particularly the mountain cow, so called from its resembling that creature, and feeding on a sort of moss found on the trees near great rivers."

The state of Tabasco, naturally fertile, may be considered as chiefly in a wilderness state.

CHIAPA was formerly a province and *alcaldia mayor* of the kingdom of Guatemala; bounded on the north by Tabasco, east by Vera Paz, west by Nueva España, and south-west by Soconusco. It extended, as a Spanish province, eighty-five leagues from east to west, and is nearly thirty across at its widest part. It was under Spain divided into districts, or *alcaldias mayores*, viz., those of Zoques, Chontales, Los Llanos, and Xiquipila. Its climate is of a warm and moist temperature, although in some high parts cold predominates.

"Its woods," says Alcedo, "abound with large trees of pine, cypress, cedar, and walnut; and of others of a resinous kind, from which are extracted aromatic gums, balsams, and liquid amber, tacamaca, copal, &c. It produces also, in abundance, swine, maize, honey, cotton, cochineal, which is only made use of for the purpose of dyeing the cotton; also cacao, and much pepper and achote, or the heart-leaved bixa; also various kinds of domestic and wild birds, especially parrots, which are very beautiful and highly esteemed; a small bird, called toto, less than a young pigeon, with green wings; this is caught by the Indians, who pluck from its tail some feathers, which they prize highly, and then restore it to liberty; it being a capital offence, according to their laws, to destroy it. The sheep, goats, and pigs, which have been brought from Europe, have multiplied in this province in a most extraordinary manner; so also have horses, which are of such an esteemed breed, that the colts are taken from hence to Mexico, a distance of 500 miles. In the woods breed many lions (?) leopards, tigers, and wild boars, a great number of snakes, some being twenty feet in length, and others of a beautiful crimson colour, streaked with black and white. The territory is, for the most part, rugged and mountainous, and watered by different rivers: none of these, however, are of any particular consideration, although that which bears the name of this province is the medium by which the aforesaid productions are carried to the other provinces; and although this province may be accounted comparatively poor, from being without mines of gold or silver, it is, nevertheless, of the greatest importance, as being the outwork or barrier to New Spain, from the facility with which this kingdom might be entered by the river Tabasco. The capital is the royal city of Chiapa, situated on a delightful plain. It is the head of a bishopric, erected in 1538; and has for arms a shield, upon which are two *sierres*, with a river passing between them: above the one is a golden castle, with a lion rampant upon it; and above the other a green palm, bearing fruit, and another lion, the whole being upon a red field. These arms were granted by the Emperor Charles V. in 1535. The cathedral is very beautiful. It contains three convents of the order of St. Francis, La Merceda, and St. Domingo; a monastery of nuns, and five hermitages. Its population is scanty and poor, and the principal commerce consists in cocoa-nuts, cot-

ton, wool, sugar, cochineal, and other articles. Its nobility, although poor, are very proud, as having descended from some ancient families of the first nobility of Spain; such as those of Mendoza, Velasco, Cortes, &c. The women suffer great debility at the stomach on account of the excessive heat, and they can never fast long."

This state has not improved since its independence of Spain.

VERA-PAZ was formerly a province and *alcaldia mayor* of the kingdom of Guatemala; bounded north by Yucatan, south-south-west and south-east by Guatemala, west by the province of Chiapa, and east by the Gulf of Honduras. It was, under the Spanish rule, in extent forty-eight leagues from north to south, its widest part. The Missionaries of St. Domingo gave it this name, by order of the Emperor Charles V., who commanded it to be so called, inasmuch as its natives were conquered merely by preaching, and without bloodshed.

"The Country," as described by Alcedo, "is rough and broken, full of deep ravines, with a *llanura* which is half a league in extent, and covered with thick and impenetrable woods. Half of this province is of a mild and benign temperature, and the other half is hot and abounding in mosquitoes of various kinds. The rains here continue nine months in the year, and the province abounds in vegetable productions and cattle, and has many mountains covered with trees, and vast caverns, in which many rivers laving the province, lose themselves. Between two lofty sierras is found a cave of very great extent, entirely of stone, within which are formed, by the dripping of waters, several pillars resembling alabaster. In this cave the cold is extraordinary, and the noise of the waters is very great, which, bursting forth at various mouths, forms a lake, which from its depth is seen to have waves like a sea, and from it rises a river, which, in the small distance that it runs, is not fordable. Besides the several rivers which water this province, great torrents of water are seen rushing down from the most lofty rocks, forming a delightful spectacle; and thus the soil is constantly so moist that the maize rots in the ground.

"This province is very subject to great tempests of thunder and lightning, strong winds, and earthquakes; and in its mountains and forests are large trees of excellent kinds of wood, imparting a balmy fragrance to the surrounding air; and amongst these we must note in particular the liquid amber of a thick and rough wood, and various kinds of balsams *copales*, *xuchicopales* *almacigos*, and dragon plants, from which is extracted the gum, called dragon's blood. Here are canes of 100 feet long, and of such thickness and size as to have at each of their knots a cavity able to contain an *arroba* of water. These canes serve as timber in building. Moreover, here are Guaya-canes, which are incorruptible, and another sort of wood, which, sawed asunder, represents on its plane pretty vary-coloured figures.

"This province is extremely fertile in all European fruits and flowers; these yielding their sweets to the labours of an infinite variety and innumerable swarms of bees; some without sting, and noted for making the clearest honey, others, like those of Spain, and others only as large as flies, others, again, whose honey causes giddiness; with this peculiarity, however, equally attached to all, that they make no honeycomb, but work under ground, forming their nests in the roots of trees. Their honey has an acid flavour, which is got rid of in a great measure by boiling; and it is not unfrequently kept and used after the same manner as the vinegar from oranges, for several domestic purposes. The woods of this province are thronged with animals and wild beasts; the largest of these is the *danta*, as big as a calf, though somewhat short and thicker set in all its joints, which on the whole resemble those of the elephant; it has on its claws, three joints on the fore feet and four on the hind feet; the head is large, the forehead is sunk in, the eyes small, and the lower jaw hangs down five or six inches, and is raised when the animal is angry, thereby discovering its teeth and tusks, which are like those of a pig; its ears are peaked, the neck is sunk in the shoulders, and the tail short, with little bristles. The hide is six fingers thick, double at the loins, and, when dried, resists every kind of arms. This animal is ferocious and terrible when irritated, and with its tusks destroys every thing it meets in its course, not excepting trees of considerable strength. Here are like-

wise lions, tigers, bears of an enormous size, cats, and mountain goats, monkeys of various kinds, wild boars, porcupines, squirrels, and a variety of other animals. Also amongst the birds are eagles, small eagles, *buaírones*, sea-crows, *alcatrazes*, bitterns, storks, paroquets, and others esteemed for their plumage and their song. This province is also filled with vipers and snakes of various kinds. The fountains and small rivers are numerous and run into the Gulf of Mexico."

CHAPTER VII.

MEXICO PROPER.

THE high mountains, called the Andes, which converge in Central America, diverge north of the Isthmus of Tehuantepec, and approaching the shores of the Pacific on the west, and towards the Gulf of Mexico on the east, spread into the most extensive plateaux in the world. The great central plateau, or table-land, of Anahuac, extends north to about 24 deg. north latitude; and the plain, or great broad fertile valley, of Chihuahua, and even the great Prairies, may be considered as a further extension of the Mexican plateau. Along the Pacific, the low lands of Cinaloa, Acapulco, and Tehuantepec, are the widest districts between the sea and the mountains. In other places numerous low hills intervene, while frequently the mountains rise almost abruptly from the ocean.

On the eastern coast, the low districts, of the provinces of Vera Cruz and New Santander, extend northerly along the gulf to the Rio del Norte, the assumed boundary of Texas. This coast has no good harbours: Vera Cruz being the best; and, at the mouth of the Lake Panuco, Tampico the next port of any consequence. The mouth of the Rio Santillana, or Barra de Santander, also admits small vessels; and to the south of the highlands, called the Sierra de St. Martin, which intervene between the Plain of Cuétlachtlan and the Isthmus of Tehuantepec, several small rivers flow into the gulf, the principal entrance of which, the Coatzacoalcos, was recently surveyed with a view of digging a canal across the Isthmus. The shallowest water over the bar is in that survey given as 6.2 metres, nearly twenty feet: we doubt the fact.

The low coast of the Gulf of Mexico, north of 21 deg. north, is lined with sand-hills, and within which are large and small lagoons; the principal of which are the lagoons of Tamiagua, Tampico, Morales, and Madre. The breadth of the plains, or low country, from the gulf to the high or undulating lands, is stated to vary from about eight miles south of Vera Cruz, to from twenty, fifty, and sixty miles further north. On the western coast, north of about the twenty-fourth degree, the shores of the Gulf of California present a diversity of surface, in some few parts low, and, generally, undulating at no great height above the sea; the soil tolerably fertile, with little wood except in the river valleys. The climate is described as healthy: the rainy days during the year being on an average about ninety. Towards the northern parts, or the head of the Gulf of California, the lands are often low, and faced with sand-hills, but the soil behind, except in the undulated country, is not considered fertile.

The great table lands of Mexico, and those extending north to the American prairies, are the most important, both with respect to soil and climate; and, although Mexico has the disadvantages of few good harbours, along the sea or gulf coast, and a climate the most fatal to human life, along the latter, yet, the soil and mines of the extensive regions of elevated plains, are adapted, under a secure,

liberal, and permanent government, to maintain a population of more than 100,000,000 inhabitants, and to render Mexico a state of great power and wealth.

The ascent from the Plain of Vera Cruz to the table-land of Anahuac is rather abrupt, and the road from Vera Cruz, which was kept in good repair, is now, in many parts, described as in the most wretched and broken condition. It leads over a number of ascents, with intervening plains.

On these plains isolated mountains rise. Near the eastern boundary of the table-land, and bordering the Plain of Cuetzlactlan, the Pic de Orizaba, rises 17,373 feet above the sea, and the Nauhcampatepetl, or Coffre de Perote, to 13,415 feet in height. These mountains are, north to south, about thirty miles distant from each other. In about 19 deg. north longitude, and 98 deg. 10 min. west longitude, the Popocatepetl rises to 17,884 feet, and is supposed to be the highest mountain in North America; north of which the Iztaccihuatl, is 15,704 feet high. Further west is the Nevado de Toluca, 15,271 feet high. The Pic de Tancitaro, near the Pacific, 10,509 feet high; not far from which the volcano of Colima rises 9193 feet above the sea. Four of these mountains only rise above the region of perpetual frost, or, in Mexico, about 15,000 feet above the sea. Nearly all these mountains are evidently of volcanic origin; three are said to be in a state of activity—the Orizaba, the Popocatepetl, and the volcano of Colima. In 1759, a volcano burst forth on one of the lower plains near the Pacific, which was called the volcano of Jorullo, it rose about 1700 feet above the plain. We are not certain if it be still in activity.

The highest elevation of the plateaux of Anahuac adjoins, or extends between, the foregoing named mountains and the isolated peaks above-mentioned. From the western base of the Orizaba and Nauhcampatepetl, the table-land or Tlascala extends in breadth about seventy miles, and in length about 100 miles. Its plateaux rises about 7200 feet above the sea. On the west of this table-land is the Plain of Mexico, or Tenochtitlan, which rises still higher, or about 7500 feet above the sea. It is about fifty miles long, and about twenty-five miles broad. Beyond the latter plain lies the most elevated of the Mexican plateaux, the Plain of Toluca, the average height of which is nearly 9000 feet. The table-land of Michoacan, west of Toluca, varies in height from 6000 feet to 6500 feet. It is interspersed with high hills and detached ridges. It is about ninety-six miles broad, and 100 miles in length. A lower country lies between Michoacan, and the Pacific. This lower district is occasionally hilly and undulating.

That section of table-land which extends south-easterly from the Plains of Tlascala and Mexico, to the Isthmus of Tehuantepec, is called the plateaux of Mixtecapan; the average height is stated to be about 5000 feet above the sea. It is traversed towards the Pacific, however, by broad valleys. The town of Oaxaca, situated in the largest valley, is about 4800 feet above the sea; the adjoining high ground, on which are the ruins of the palace of Mitla, is 5300 feet high. Along the sea-coast to the north-west, and sloping down to Acapulco, the table-land is traversed by deep valleys, extending in an east and west direction. The road from Mexico to Acapulco passes across four of them. They decline towards the sea.

It is rather presumptuous to speak positively of a country so ill explored as Mexico, but all authorities agree in stating that no continuous range of mountains traverses the southern section of table-land, except the hilly ridges which separate the plains from each other. These rise 500 feet or 600 feet—some peaks above 1000 feet, above the plains. In about 20 deg. north latitude, the heights, which bound the limit of the plain west of the city of Mexico, rise in a continuous range, called the Sierra Madre. This range follows in a west-north-west direction near the town of St. Felipe, and thence north-westerly

to the south of the town of Durango.—This northern Andean chain extends in greater breadth north-north-westerly, along the eastern boundary of the Plain of Chihuahua, separating that plain from the low region of Cinaloa, and the mountainous district of Sonora. Near the Presidio de S. Bernardino, about 32 deg. north, rises the mountain de las Esquelas. The elevation of this great range is not well ascertained, but it rises to a considerable height east of the town of Durango, where the mines, in valleys, are from 8000 to 9000 feet above the level of the ocean.

CHAPTER VIII.

REVENUE AND EXPENDITURE OF MEXICO.

THE public revenue of a state, if equal to its necessary expenditure, and if equitably levied, constitutes not only the great element of the power and permanency of government, but of the steady industrial and moral condition of the people. The distribution, levying, and proceeds of the taxes,—the expenditure of the revenue,—and the maintenance of public credit in Mexico unfortunately does no honour to the wisdom of the different administrations, nor to the intelligence of those who in the legislative assemblies have passed laws for raising a public revenue. Of several statements, the following, drawn up by Mr. Mayer, is that which seems, approximately, the most correct:—

“The income of the Mexican government is derived from revenues on foreign commerce, imposts on internal trade, imposts on *pulqué*, export duty on the precious metals, lotteries, post-office, stamped paper, taxes, tobacco, powder, salt-works, and several other sources of trifling importance.

“The amount of the revenue of Mexico at different dates has been given as follows:—

Y E A R S.	Revenue.	Y E A R S.	Revenue.
	dollars.		dollars.
1700.....	3,000,000	1827.....	10,494,299
1763.....	5,705,876	1828.....	12,232,385
1780.....	15,016,974	1829.....	14,493,189
1802.....	20,200,000	1830.....	18,923,299
1825.....	10,690,602	1831.....	16,413,060
1826.....	13,289,682		

“In 1840, these revenues are stated in the report of the minister of the treasury as follows:—

FOREIGN COMMERCE, &c.	Nett Proceeds after deducting Expense of Collection.	FOREIGN COMMERCE, &c.	Nett Proceeds after deducting Expense of Collection.
	dollars.		dollars.
Imposts on foreign commerce.....	7,115,849	Brought forward.....	12,199,580
" on interior	4,306,485	Enteros de productos líquidos.....	452,146
" on property, income, &c.....	400,001	Extraordinary subsidy.....	103
Exchanges, &c.....	307,427	Arbitrio extraordinario.....	78,177
Creditos activos.....	3,309	Capitacion.....	483
Balances of accounts.....	355	Donations.....	13,662
Carried forward.....	12,199,580	Total.....	12,744,167

“In 1839 the revenues amounted to 11,215,848 dollars. The income from the post-office department (which is not included in the statement for 1840), was 178,738 dollars in 1839. In 1840 the lotteries produced the gross sum of 215,437 dollars, but as the expenses connected with their management amounted to 158,485 dollars, it left a balance of but 56,952 dollars for the government. The ‘*sealed paper*,’ or stamp-tax produced

Until 1841, the whole of the revenue, except 11½ per cent was appropriated to the payment of 18,550,000 dollars, while the remaining claims were entirely unprotected by securities. Shortly after the accession of Santa Anna to power, he *suspended* (by a decree of the 16th of February) the payment of the first five funds charged upon the customs, as stated in a preceding table, but reserved the *active appropriation* for the tobacco and *English interest debts*. This, as may be well imagined, created great dissatisfaction among the mercantile classes, and among numbers of persons who had invested their capital in government loans, with a reliance upon the *revenues* as a solemn pledge for their redemption. Santa Anna, however, withstood the torrent manfully. He was assailed by legations, newspapers, and individuals, but nothing could induce him to yield the pressing wants of the government to their importunities. He was, in fact, forced to the measure. The national credit was irremediably impaired, and he found it impossible to obtain loans. The consequence was the seizure of the customs by the *suspension* of their prior appropriation until he was enabled to relieve his treasury.

PROSPECT OF PAYMENT OF THE DEBT OF MEXICO.

As to the prospect which may be held in view in regard to the payment of either interest or principal of this debt, we have little further to observe than that, in June this year, 1846, President General Parades tells the assembled legislative congress, that, however much convinced "that credit is the first element of power to a government, and reliance on its good faith the greatest resource of its strength, he had been reluctantly compelled to suspend provisionally the payments of government; an extreme measure, rendered, however, imperative to save the nation from ruin, a ruin that must have equally been shared by its self-same creditors; and, in conclusion, he urged congress to adopt some method of finance, capable of assisting him to carry on the war with vigour, and support the honour of the country."

Independently of the English and the American debt, the claims upon the Mexican government have usually been created by means of loans of the most usurious character.

On the 20th of September, fifteen days before the treaty of Estansuela, the administration of President Bustamante offered the following terms for a loan of 1,200,000 dollars. It proposed to receive the sum of 200,000 dollars in *cash*, and 1,000,000 dollars represented in the *paper or credits* of the government. These credits or paper were worth, in the market, nine per cent. About one-half of the loan was taken and the parties obtained orders on the several maritime custom houses, receivable in payment of duties.

The revenues of the custom house of Matamoras have been always hitherto appropriated to pay the army on the northern frontier of the republic. During the administration of General Bustamante, the commandant of Matamoras issued bonds or drafts against that custom house for 150,000 dollars, receivable for all kinds of duties as cash. He disposed of these bonds to the merchants of that port for 100,000 dollars, and in addition to the *bonus* of 50,000 dollars, allowed them interest on the 100,000 dollars at the rate of three per cent per month, until they had duties to pay which they could extinguish by the drafts.

The mint at Guanajuato, or the right to coin at that place, was contracted for in 1842 by a foreign house in Mexico, for 71,000 dollars *cash*, for the term of *fourteen years*, at the same time that another offer was before the government, stipulating for the payment of 400,000 dollars for the same period, payable in annual instalments of 25,000 dollars each. The 71,000 dollars in hand were, however, deemed of more value than the prospective 400,000 dollars! This mint leaves a nett annual income of 60,000 dollars!

It appears to us quite evident that all the taxes which can be levied, even to an amount equal to confiscation, on the produce of labour in Mexico, will be found to be far short of the amount necessary to maintain the army, the civil expenditure, and the payment of the interest of the national debt; especially while the church and priests absorb so large a share of the produce of industry.

TABLE of the Expenses of the Mexican Government, in 1840.

			loans and balances.		

The mode of taxation in Mexico is severely and justly commented on by the late American minister, Mr. Thompson. Alluding to the exports, he says, out of the official gross amount.

"Of the average of 22,000,000 of exports, less than 2,000,000 consist of all other articles than the precious metals. I have no doubt that the amount of specie exported is very much larger than is indicated by the books of the custom-houses. A duty of six per cent is levied upon all that is exported, and no one acquainted with the character and practices of Mexican custom-houses, and I may add, of their officers, can believe that the whole amount is returned. The duty upon all that is not returned goes into the pockets of the officers of the customs, and I have no doubt that it amounts to a very large sum. Gold is an article so easily smuggled that enormous sums are sent off in almost every vessel which sails for Europe. *The amount of duties on imports varies, of course, with their ever-changing tariff.* Those who had the best means of forming an accurate estimate during my residence in Mexico, told me that it amounted to from 4,000,000 to 6,000,000 per annum. This, also, would be a most fallacious standard by which to estimate the amount of importations, for the same reason.

"In addition to the revenue derived from imports, the direct taxes are exceedingly onerous. Every thing is taxed, from the splendid palaces, coaches, and plate of the wealthy, to the dozen eggs which the poor Indian brings to market. *I do not suppose there is any city in the world where houses are taxed so high, and hence the enormous rents. But after paying the taxes very little is left to the proprietor. A decent house cannot be had for less than 2500 dollars, and from that price to 4000 and 5000 dollars per annum.*

"Besides the sources of revenue which I have mentioned, there is another and a very

large one from imposts on internal commerce, that is between one department and another. Every article of commerce thus passing from one department to another, provided it has been opened and the bulk broken, is thus taxed. The principal revenue from the *alcaba*, internal duties, thus derived is from the duty on specie. The revenue from duties on internal commerce in 1840, amounted to 4,500,000 dollars. Another source of revenue is the per centage of the produce of the mines, seignorage, coining, &c. The charges upon money taken from the mines amount to about five per cent, all of which is paid to the departmental government. The general government receives in addition to this about three per cent, which goes to support the College of the Minería in the city of Mexico."

TOBACCO MONOPOLY.

"The culture of tobacco is prohibited except to a very limited extent in the districts of Orizaba and Cordova. Each farmer is restricted to a limited number of acres. The tobacco produced is sold to the government at a stated price, which was very much below its real value, by whose agents it was made into cigars and snuff, and sold at very large profits.

Mr. Thompson says "a sale took place just before I left Mexico of the interest of one-third which the government owned in the Fresnillo Mine, which is at this time the most profitable of all the mines in Mexico. The government derived a revenue of upwards of 500,000 dollars per annum from this mine; it sold the fee-simple for about 400,000 dollars. That is to say, that sum was all which went into the public exchequer—how much more in *gratifications*, I know not; but a very large sum of course. Is it any wonder that officers in the army are forced to sell a certificate of pay due to them, amounting to 2500 dollars, for 125?"

Before the revolution, the King of Spain received, among other ecclesiastical revenues, the ninth part of the tithes, which was granted him by the pope. After the revolution compulsory process for the collection of tithes was abolished, and since that time the government has received nothing from this source, nor of any other revenues which are derived from the church.

There are taxes levied on the cock-pits, the sale of *pulque*, and there is a *monopoly of playing cards*; and the *ice* is taxed which the Indians bring on their backs in panniers, forty miles from the mountain of Popocatepetl. The revenue from the post-office scarcely pays the expenses.

Mr. Thompson tells us, "Of gunpowder, an immense quantity is used in their civil wars, in the mines, firing cannon on days of religious festivals, and fireworks, for which the Mexicans have a great passion. The powder manufactured is of the most inferior quality; good powder used by sportsmen sells as high as four dollars the pound. This manufacture is also a government monopoly.

"A small amount is realised from the sale of lottery-tickets, raised for special grants to convents and other religious establishments.

"The maritime custom-houses in 1832, yielded to the government the sum of 12,000,000 dollars, that is to say, that sum was acknowledged to have been received by the respective custom-house officers; how much more the actual receipts were can only be conjectured. It would, however, be very safe to say at least one-third

"The receipts at the maritime custom-houses do not now amount to more than 6,000,000 or 7,000,000 dollars. As nothing is more capricious than Mexican legislation on the subject of imports on foreign commerce, it is very difficult to form an estimate approximating accuracy upon this point.

"The following, although not pretending to minute accuracy, may be regarded as in some degree an approximation to the revenues of the government, and the sources from which they are derived:—

	dollars.
From the maritime custom-houses	6,500,000
Interior commerce	4,500,000
Direct taxes	3,000,000
Per centage on produce of mines	1,000,000

Profits of mints	500,000
Tobacco monopoly	500,000
Post-office, lotteries, manufactures of powder and salt	500,000
Tolls and all other sources	500,000

16,000,000

"The local taxes levied by the different departments which may be stated at 4,000,000 dollars more, making an aggregate of 21,000,000 dollars, to which an addition should be made of 5,000,000 or 10,000,000 dollars more which is paid, but embezzled, and, therefore, does not find its way into the public treasury.

Mr. Brantz Mayer gives the following statement of the army of Mexico:—

"I may state that the forces have been considerably augmented and in all probability amount to 40,000 men. In 1840 the Mexican army was composed of

MINES AND MINERALS OF MEXICO.

With regard to the capabilities and resources of Mexico, the precious metals have at all periods, since the first conquest of the country by Cortez, been the objects of primary avidity with the Spanish rulers and people. They considered gold and silver as the standard of the value of these vast regions; and, they disregarded their really far richer powers of production, those of agriculture. The latter was only attended to with reluctance, and merely from necessity to obtain food.

With the exception of the silver and gold mines, the mineralogy of Mexico has been nearly altogether neglected. Tin, lead, and the finest copper are found in large quantities, but very little of any of these are wrought.

CHAPTER IX.

AGRICULTURE OF MEXICO.

It will appear, from the miscellaneous descriptive sketches which we have given of Mexico—and nearly all accounts corroborate the fact—that agriculture is in a most rude and most backward condition throughout nearly all Mexico. Prohibition of foreign agricultural products has been persevered in, but husbandry has not improved. Cotton-wool is prohibited: the climate and soil is favourable to its culture, but enough is not produced to supply the demand for the miserable cotton factories of the country; although cotton-wool sells for treble price at which it could be imported from the United States of America.

One cause of slovenly agriculture, and of the indolence of the rural population, is the facility of obtaining sufficient food from the natural products of the soil.*

* In his account of the agriculture of Mexico, Von Humboldt enters into many curious and

We believe that the mines of precious metals are to some extent another cause: high authorities deny this.

Notwithstanding the authority of M. Von Humboldt, it is considered that, generally speaking, agriculture is in a very backward condition.—(See Mayer, Gilliam, and other recent authorities.)*

PRINCIPAL ARTICLES OF CULTURE.—The same soil and climate which produces the plantain tree, yields the *farina* of the cassava root, called *manioc*, which is made into bread; and which the natives call *pan de tierra caliente*. The flour of manioc, when dried and toasted, is secure from the depredations of worms and other insects: it contains, besides farinaceous secula, a saccharine matter and a viscous substance resembling caoutchouc. The cassava root is not cultivated in New Spain at a greater height than 600 or 800 metres above the level of the sea; its poisonous juice becomes harmless by boiling, and separating the scum that rises to the top, and is then used by the natives for seasoning their food. The original inhabitants of Hayti, after the conquest of their country by the Spaniards, used to poison themselves with this juice, and for that purpose assembled in parties of fifty or more to take it together.

MAIZE is the chief food of the inhabitants of Mexico: it is cultivated from the coast to the height of 2800 metres above the sea; in very fertile lands, and in very good years, it gives a return of 800 to one; but the average return for the *intra-tropical* part of the country is not more than 150 for one; in very hot and moist districts two or three crops are obtained in the year, but in most parts of the country only one is grown. No crop is more uncertain than maize, and as it is seldom equally good in every part of the kingdom, the transport of maize comes to be the principal branch of internal commerce; a general failure of the crop would be followed by scarcity, or even famine. The annual produce of maize was estimated by Humboldt at 17,000,000 of *fanegas* annually.

interesting details concerning the origin, natural history, and cultivation of the different vegetable productions of that country.

Of all productions cultivated for the use of man, none affords so much food from the same quantity of land as the plantain or banana tree: a field of 100 square metres in plantain trees affords 4000 lbs. weight of food; the same field in wheat will produce about thirty lbs.; and in potatoes ninety lbs. The quantity of food from the plantain tree is, according to Von Humboldt, to the quantity of food from wheat as 133 to one, and to the quantity from potatoes as forty-four to one; the quantities of nourishment, however, are not proportioned to the weights, for the fruit of the plantain tree contains a greater portion of mucilaginous juice than the seeds of the *cerealia*. An *arpent*, covered with plantain trees, will maintain fifty persons: the same quantity of ground sown with wheat, will not, he contends, support two individuals. The plantain tree does not thrive where the medium temperature is below 24 deg. (centign. therm., or 75.2 deg. F.), but there are 60,000 square leagues of the Mexican territory in that situation. The fruit of the plantain tree is farinaceous, but contains a small portion of vegetable gluten, and a great quantity of saccharine matter. Mr. Humboldt remarks, that in all tropical countries, saccharine matter is considered to be eminently nutritious.

* "Mexico," says Chevalier, "is a country so rich that famine scarcely visits even the most indolent. In the *tierras calientes*, and even on the *plateau*, the natives are content to dwell with their families in a cabin of bamboo trellis-work, so slight as scarcely to hide them from the stranger's gaze, and to sleep either on mere mats or at best on beds made of leaves and brushwood. Their dress consists simply of a pair of drawers, or petticoat, and a serape (a dyed woollen garment) which serves for a cloak by day and a counterpane by night. Each has his horse, a sorry beast, which feeds at large in the open country; and a whole family of Indians is amply supplied with food by bananas, chili, and maize, raised almost without labour, in a small inclosure round the hut. Labour, indeed, occupies but a trifling portion of the Indian's time, which is chiefly spent in drinking pulque, sleep, or singing to his wretched mandolin hymns in honor of Notre Dame de Gaudaloupe, and occasionally carrying votive chaplets to deck the altar of his village church. Thus he passes his life in a dreamy indifference, and utterly careless of the ever-reviving émeutes by which the peace of Mexico is disturbed. The assassinations and robberies which the almost impotent government allows to be committed with impunity on the public roads, and even in sight of the capital, are to him only matter for conversation—the theme of a tale or ditty. And why should he trouble himself about it? Having nothing in the world but the dress in which he stands, his lance, spurs, and guitar, he has no fear of thieves; nor will the poniard of the assassin touch him, if he himself, drunk with pulque or chingarito, do not use his own."

It may be preserved for three years at Mexico, and in colder climates for six or seven years. The Indians prepare a fermented liquor from maize, and before the arrival of the Spaniards, they extracted sugar from the stalks.

WHEAT.—None of the *cerealia* of the old continent were known in America when it was first discovered. Wheat is not cultivated in the intra-tropical part of Mexico, at a lower elevation than 800 or 900 metres above the level of the sea, and in very small quantity at a less height than 1200 or 1300. At a greater elevation than 3500 or 4000 metres, neither wheat nor rye come to maturity. The Mexican wheat is of excellent quality, and the medium return wherever grown is from twenty-two to twenty-five for one: in some places it gives from thirty to forty for one. Much wheat has been exported from Vera Cruz to Cuba: barley and rye thrive very well in parts of Mexico; oats are very little cultivated; the potato is a great object of culture in the high and cold parts of the country; rice is but little attended to, though well adapted for the marshy lands along the sea coast.

VINEYARDS.—The Spanish government has always discouraged in its colonies the cultivation of the vine, the olive, the mulberry tree, and the plants yielding hemp and flax. While Humboldt was in Mexico, an order came from Madrid to grub up all the stocks of vines in the north part of the country, where they had been cultivated with so much success as to call forth the complaints of the wine merchants of Cadiz. There was then but one olive plantation in Mexico; it belonged to the archbishop of Mexico; tobacco was also subjected, and continues to be subjected to monopoly. In 1764, a royal monopoly was established, and no tobacco was allowed to be planted, except in particular districts, and none sold, except to the king's officers. Parties of soldiers have been regularly employed to go about the country in search of tobacco-fields, and impose fines on the owner of prohibited culture, and destroy the plantation: this odious monopoly yielded to the King of Spain, in Mexico alone, a revenue of more than 20,000,000 of livres annually.

AGAVE, OR MAGUEY.—The plantations of the *maguey de pulque* extend wherever the Aztec language is spoken. On the Mexican plain the maguey is scarcely cultivated to the north of Salamanca. The finest cultivations are in the valley of Toluca and on the plains of Cholula. The agaves are there planted in rows at a distance of fifteen decimetres, or fifty-eight inches, from one another. The plants only begin to yield the juice or sap, when the *hampe* is on the point of efflorescence. The cultivator goes daily through his *agave* plantations to mark those plants which approach efflorescence.

On the situation, on the soil, and on the temperature of the climate, depend the early or later periods of efflorescence. Near Cholula, and between Toluca and Cacahuacan, a maguey of eight years old gives signs of development of its *hampe*. They then begin to collect the juice, of which the pulque is made. They cut the *corason* or bundle of central leaves, and enlarge insensibly the incision, and cover it with lateral leaves, which they raise up by drawing them close, and tying them to the extremities. In this incision the vessels appear to deposit all the juice which would have formed the *colossal hampe* loaded with flowers.

"The juice of the agave is of a very agreeable sour taste. It easily ferments, on account of the sugar and mucilage which it contains. To accelerate the fermentation, they add a little oil and acid pulque. The operation is terminated in three or four days. The vinous beverage, which resembles cider, has an odour of putrid meat extremely disagreeable; but the Europeans who have been able to get over the aversion which this foetid odour inspires, prefer the pulque to every other liquor. They consider it as stomachic, strengthening, and especially as very nutritive; and it is recommended to lean persons. Whites also who have been known, like the Mexican Indians, totally to have abstained from water, beer, and wine, and to have drunk no other liquor than the juice of the agave. Connoisseurs speak with enthusiasm of the pulque prepared in the village of Hocotitlan, situated to the north of Toluca, at the foot of a mountain almost as elevated as the Nevado of this name. They affirm that the excellent quality of this pulque does not altogether depend on the art with which the liquor is prepared, but also on a taste of the soil communicated to the juice, according to the fields in which the plant is cultivated. There

are plantations of maguey near Hocotitlan (*haciendas de pulque*) which bring in annually more than 40,000 livres, or 1666l. sterling."—*Alcedo. Humboldt.*

A strong spirit is distilled from the pulque, called *mexical*, or *aguardiente de maguey*. The sugar-cane of a particular variety, with a violet-stalk, originally from the coast of Africa (*cano de Guinea*), is preferred in the province of Caracas for the fabrication of rum to the sugar-cane of Otaheite. The Spanish government, and particularly the *real hacienda*, prohibited the distillation of *mexical*, as prejudicial to the Spanish brandy trade. An enormous quantity, however, of this maguey spirit was clandestinely manufactured in the intendances of Valladolid, Mexico, and Durango, and especially in Leon.

The fibre of the maguey is formed into flax, and of it is also made the papyrus (*cyperus papyrus* of the Egyptians). The paper on which the ancient Mexicans painted their hieroglyphical figures was made of the fibres of agave leaves, cleansed in water, and disposed in layers like the fibres of the Egyptian cyperus, and the mulberry (*broussonetia*) of the South Sea Islands. Humboldt brought to Europe several fragments of Aztec manuscripts written on maguey paper, so varied in thickness that some resembled pasteboard, others Chinese paper. These fragments were interesting, as the Mexican hieroglyphics deposited at Vienna, Rome, and Veletri, are on *Mexican stag-skins*. The thread of maguey flax is called *pite-thread*.

The Mexicans cultivate all the garden-stuffs and fruit-trees of Europe.* The Aztecs and some other nations of Americans cultivated onions (in Mexican *xonacatl*), haricots (in Mexican *ayacotli*, in the Peruvian or Quichua language *purutu*), and gourds (in Peruvian *capallu*). Cortes, speaking of the eatables which were daily sold in the market of the ancient Tenochtitlan, expressly says, that every kind of garden-stuff (*legume*) was to be found there, particularly onions, leeks, garlic, garden and water-cresses (*mastuerzo y berro*), borragé, sorrel, and artichokes (*cardo y tagarninas*). It would appear that no species of cabbage or turnip (*brassica et raphanus*) was cultivated in America.

Great numbers of farinaceous roots were also cultivated in Mexico and Peru.

The central table-land of Yutos produces in great abundance cherries, prunes, peaches, apricots, figs, grapes, melons, apples, and pears. In the environs of Mexico the villages and gardens yield in the months of June, July, and August fruit of most exquisite flavour, although the trees are in general very ill taken care of. In Mexico, Peru, and New Granada are found both the fruits of temperate Europe, and ananas, different species of *passiflora* and *tacsonia*, sapotes, mameis, goyavas, anonas, chilimoyas, and other rich productions of the torrid zone. The eccle-

* Mr. Waddy Thomson, alluding to fruits and vegetables, says "The apples and peaches of Mexico are not good, the latter decidedly inferior. The pears are very fine. They have one species of this fruit which is decidedly the best that I have ever seen; it is nearly the size of a goose-egg, and its flavour as delicious as that of the famous Philadelphia pear. All the fruits of the tropics—the orange, pine-apple, banana, mango, cherimoya, and last and least in size, but most exquisite in flavour, the *tuna*—are produced in Mexico to great perfection. It is the produce of one of the infinite varieties of cactus, of which I have seen twenty different varieties growing on an acre of land. One of these varieties runs up to the height of thirty or forty feet, in the form of a beautifully fluted column, and is used to enclose gardens, by planting close together. That which produces the *tuna* grows to the height of thirty feet, and covers an area of twenty feet in circumference, with the leaves (if leaves they may be called) dropping over each other like the shingles of a house. These leaves are exactly like those of the prickly pear on our mountains, only larger, generally of twelve or eighteen inches in breadth. The fruit is about the size, and very much the shape, of a duck's egg. The combined flavours of a water melon, a cucumber, and a lump of sugar-candy, will give some idea of this delicious and refreshing fruit, as it melts in the mouth. The cherimoya is a large fruit, and is altogether delicious. The idea which occurs to every one on eating it for the first time is, that it is a vegetable custard. I scarcely ever offered it to an American who did not make that comparison, thinking that he had said an original and smart thing; but I had heard it before at least a hundred times. They have a fruit very much like what we call the 'May-apple.'"

siastics, and especially the missionaries, contributed greatly to the early introduction of European fruits and vegetables. The gardens of the convents and of the secular priests were, in fact, nurseries, from which the recently imported vegetables were diffused over the country.

Bees'-wax is an article produced in great quantities. In the churches wax candles are perpetually burning, and are also used in processions.

Sugar was formerly an important article of production. The cane is cultivated in many districts. But, although it has been proved that it can be produced cheaper than by slave labour in Cuba, yet no great efforts are made to cultivate the sugar cane as an important branch of industry. It succeeds very well in most of the countries south of twenty-eight degrees. The most productive plantations are on the declivities of the table land, and in the lower plains, to the height of 5400 feet above the sea; but in many places well sheltered the sugar cane grows at an elevation of nearly 7000 feet. These plantations are most numerous in the valley of the Rio Santiago, and on the plains towards the Pacific. Their produce is very considerable, but nearly the whole of the sugar is consumed in the country.

From Vera Cruz there was exported annually more than half a million of arrobas of sugar, and M. Humboldt estimated the domestic consumption in Mexico at more than twice as much. Cuba, he says, in 1803 exported 2,576,000 arrobas of sugar, and used for her internal consumption 440,000 more. The export of sugar from the Havannah, from 1801 to 1810 inclusive, averaged 2,850,000 arrobas, or about 644,000 cwt. a year. Cotton, indigo, coffee, and cacao, have never been cultivated to any great extent in New Spain; though the Mexicans, like all other Spaniards, are great consumers of chocolate. Humboldt ascertained the quantity of cacao exported annually from the Spanish settlements, from 1799 to 1803, to be as follows;—from Venezuela and Maracaybo, 145,000 fanegas; from Cumana, 18,000; from New Barcelona, 5000; and from Guyaquil, 600,000; total, 228,000. But he omitted the delicate cacao of Guatemala. The vanilla sent to Europe was nearly all from the provinces of Oaxaca and Vera Cruz. Great care is required in drying this plant. Cochineal was formerly a production cultivated only in Mexico. Oaxaca furnished annually 32,000 arrobas of cochineal, valued at 2,400,000 dollars.

Very little silk is produced in Mexico; a company has lately been formed in order to cultivate the mulberry and breed silk-worms.

The annual produce of agriculture of New Spain was valued by Humboldt at 29,000,000 of dollars. This, like nearly all other estimates respecting this country, must be considered vague.

PRICES of Provisions, &c., to Housekeepers in the City of Mexico, as stated by Mr. Mayer.

PROVISIONS, &c.	Quantities and Prices.	PROVISIONS, &c.	Quantities and Prices.
MEATS.		Fruits—(continued.)	
Beef.....	12½ cents per 20 ounces.	Plantains.....	6½ cents for four.
Mutton.....	12½ " " 18 "	Grapes.....	25 " per lb.
Hams.....	50 " " lb. "	Walnuts.....	6½ " for forty.
Ducks.....	37½ " " pair.	Melons.....	6½ to 12½ cents each.
Turkeys.....	1 dir. 50 " for each.	Avocates.....	6½ cents for four.

" (white).....	12½ " " "	They vary according to situation, but they are very high throughout the capital; 500 dollars, 2500 dollars, and even higher rates, are given for the very best.	
FRUITS.			
Pines.....	12½ cents each.		
Chirimoyas.....	6½ to 12½ cents each.		
Peaches.....	6½ cents for four.		
Oranges.....	6½ " " six.		

CHAPTER X.

MANUFACTURES.

SPAIN prohibited, but was unable altogether to prevent manufacturing industry in her colonies. The great extent, and populousness, of her foreign possessions,—the remoteness of the principal settlements from the coast,—the difficulty of transporting bulky commodities over the interior of America,—the want of industry and commercial enterprise in her subjects at home,—the almost exclusive attention of her government to the acquisition of the precious metals,—and the Spanish indifference, and ignorant contempt, for other sources of opulence,—all contributed to bring forward some fabrics in Mexico. Spain, it is true, recognised the existence of a few branches of manufacturing industry in her colonies,—but the policy was to sacrifice those at any time to the real, or supposed, interests of the mother country. About the middle of the eighteenth century an extensive plan for the establishment of European manufactures at Quito was proposed to the Spanish ministry, and undertaken with their consent and apparent approbation, but was defeated by secret instructions given to their agents in America; and in 1801 the manufactory of *Indian chintz* in Mexico was prohibited, lest it should interfere with the cotton manufactures of the peninsula. It must not, however, be forgotten that this was also the avowed policy of England; and that even Lord Chatham was its champion.* But neither the governments

* Lord Chatham declared that he would not, if he could prevent them, allow the colonies to manufacture a horse-shoe nail. Mr. Thompson says, "The mechanical arts are in a low condition. Most of the articles of every description which are used there are brought from other countries, with the exception of plate, saddles, and a few others. Large quantities of plate are manufactured both for churches, and individuals. I never saw a handsome piece, however, which was made

of England, nor of Spain, could prevent the colonies from manufacturing certain necessary articles.

The chief manufactures of Mexico under the Spanish government up to 1807 were woollens, cottons, gold and silver lace, hats, leather, soap, and earthenware; but the total value of the goods which they produced, according to Humboldt, was not more than 7,000,000 or 8,000,000 of dollars annually. Some trifling fabrics of silk were introduced since that time; and the manufactures increased considerably in consequence of the war with England and the interruption of foreign commerce. Tobacco and gunpowder were royal manufactures and monopolies; and the former brought to the crown a clear revenue of 4,000,000 of dollars annually. Mexican artizans were said, by Von Humboldt, to be remarkably skilful in works of plate and jewellery; and, like some of the eastern nations, they had a singular turn for imitation; that very good carriages were made at Mexico, though the best coaches came from England. Mr. Thompson denies that they are skilful plate workers.

There were carriage-roads established by Spain from Mexico to most of the principal towns of the kingdom; but the transport of commodities has been chiefly effected, as in Old Spain, on the backs of mules. The new road from Perote to Vera Cruz was compared by Humboldt to the roads of the Simplon and Mont Cenis. It was going since then to ruin; but is in better condition, since the enterprising Americans have established diligences, driven also by Americans, between Vera Cruz and the city of Mexico.

Of the present state of manufactures in Mexico, Mr. Mayer gives the following statement:—

“A favourite mode,” he says, “of raising loans in Mexico, for the benefit of government, has been that of granting permits to merchants (chiefly Englishmen) to introduce cotton twist into the republic. This is a prohibited article—prohibited for the purpose of cherishing the manufacturing establishments of the country. That these have progressed to a very considerable extent, and have entirely outstripped the production of the cotton planters of Mexico, will be seen by the annexed table, which I have obtained from the most authentic sources:—

STATISTICS of Mexican Manufactures.

DEPARTMENTS.	Factories.	Spindles Established.	Spindles in Erection.	TOTAL.
	number.	number.	number.	number.
In Mexico.....	12	30,156	30,156
“ Puebla*.....	21	33,672	12,240	47,912
“ Vera Cruz.....	7	17,860	5,208	23,068
“ Guadalajara.....	5	11,312	6,500	17,812
“ Queretaro.....	2	7,020	7,020
“ Durango.....	4	2,520	2,520

“ Sonora.....	1	1,000	1,000
Total.....	53	107,340	23,940	131,280

there. They say that the saddlers of no other country can make a Mexican saddle. I do not think any decent saddle would if he could. There are two articles, however, which I believe have never been manufactured in any other country—the reboso (a long shawl worn by the women), and the serape, which is used all the year round by the men. The reboso is made either of cotton or silk, and sometimes one-half of each. Those made of cotton are most esteemed, and sell for the highest price. They sell for from twenty to fifty and a hundred dollars. If they could be made as other similar fabrics are, by European skill and machinery, they would not cost ten dollars. The serape is nothing more than a blanket, the warp of cotton and the filling of wool, with all the fantastical figures woven upon it which characterise the Indian taste for wampum and beads. They sell at from three dollars to three hundred. In summer or winter nearly every Indian you meet has one thrown over his shoulders, and in the rainy season no man rides five miles without one.”

* Mr. Thompson says,—“Puebla is the Lowell of Mexico. The principal cotton manufactories are located there, and some of them in very successful operation, which can be said of

"It must be remarked, that there are three manufacturing establishments in the department of Durango, the number of spindles in which, are not included in the preceding table, because the *Junta de Industria* had not received very definite information respecting them. They may, however, be calculated at about 4000, which, added to the 131,280, will give a grand total of 135,000, at least. The number of looms, also, in the republic is not presented, because *data* have been furnished only in relation to those moved by machinery. An immense number of hand-loomers are in constant occupation throughout the republic.

* At the town of Lowell, alone, they make nearly 1,250,000 yards of cotton cloth per week, employ about 9000 operatives (6375 females), and use 433,000 lbs. of raw cotton per week. The annual amount of raw cotton used, is 22,568,000 lbs.; enough to load fifty ships, of 350 tons each; and of cotton manufactured, 70,275,910 yards: 100 lbs. of cotton will produce eighty-nine yards of cloth.

The average price of *mantas* (cotton cloth), of one *vara* width, in 1842, was about twenty-five cents the *vara*: and of *twist*, No. 12 to 22, about seventy-five cents the pound. It was estimated, that if cotton fell in consequence of importations being

very few others. The English and other foreign merchants had, in 1842, either by the force of argument or some more potential influence, induced the President to consent to the admission, on more favourable terms, of coarse cotton goods; but the united and violent opposition of the manufacturers of Puebla defeated the arrangement. I said that very few of these establishments in Mexico were prosperous, or ever have been, although the price of an article of cotton goods is in Mexico thirty cents a yard, which sells in the United States for six cents. This results from many causes, which appear insuperable. The first of these is the high price of the raw material, which ranges from forty to fifty cents per pound, and in such articles as coarse cottons, the raw material constitutes the chief element of value. The importation of raw cotton is absolutely prohibited, and the tariff policy in Mexico, as in all other countries, rests upon a combination of different interests which are benefited by it; and although neither the manufacturers nor the cotton growers constitute a numerous class in Mexico, yet their combined influence, with the aid of the catch-words 'National independence, home industry,' &c., which have had so much power in a much more enlightened country than Mexico, are all-sufficient to sustain the prohibitory system—by which a Mexican pays for one shirt a sum that would buy him five in any other country. Another immense disadvantage of the Mexican manufacturer is, that all his machinery is transported by land at enormous cost—and when any portion of it gets out of order, the difficulty and delay of repairing it, and the consequent loss are incalculable. However tempting to such an investment may be the high prices of the manufactured articles, those high prices are equally tempting to smuggling in a country with 10,000 miles of frontier and sea-board. There is, perhaps, no other country where the receipts of the custom-house are so little to be relied on as to the amount of importations, and where smuggling is carried to so great an extent; even where goods are regularly imported, innumerable frauds are practised both by and upon the custom-house officers."

allowed, or a large crop, to twenty-five dollars the quintal, these articles would be reduced to eighteen and three-quarters cents the *vara* for the first, and to fifty cents the pound for the second. This condition of the market would prevent all importations from abroad, even aided by smuggling.

A merchant of the city of Mexico, informed Mr. Mayer that there are about 5000 hand-loom throughout the departments, which will work up all the spun yarn into *mantas* and *rebosos* as fast as it can be made. Many of these looms are entirely employed in the manufacture of the common *rebosos* the consumption of which is so great among the poorer classes. The value of these looms is estimated at between 6,000,000 dollars and 7,000,000 dollars. The number of persons employed, in every way in manufactures, cannot be much short of 30,000.

"The power made use of for the movement of the factories is water; which is abundant for that purpose, all over the country, proceeding from small streams falling from the mountains into the neighbouring plains or barrancas. Owing to the scarcity of wood, and the costliness of its transportation, steam cannot be advantageously applied.

"There are several manufactories of cotton balls, or thread, in Mexico, but they are not of very great importance.

"Paper factories are working with considerable success. There are two near the capital, one at Puebla, and one in Guadalajara. Their productions are very good, but by no means adequate to the consumption of the country. The quantity of this article used for *cigarritos*, or paper cigars, is inconceivable. The best coarse wrapping or envelope paper, I have ever seen, is made in Mexico from the leaves of the *Agave Americana*, the plant which yields "pulque." It has almost the toughness and tenacity of iron.

"Both at Puebla and Mexico there are several glass factories, making large quantities of the material for windows and common tumblers. Their produce is, nevertheless, insufficient for the wants of the country.

"Woollen blankets, and some very coarse woollen cloths or *baizes*, are also manufactured in the republic. The blankets are often of beautiful texture, and woven, with the gayest colours and patterns, into a garment that frequently costs a fashionable cavalier from two to five hundred dollars. As this is as indispensable an article for the comfort of a *lépero* as of a gentleman, and as necessary for a man as a *rebozo* is for a woman, you may readily imagine how great is the consumption.

"Such is a sketch of this branch of industry, to which the government and people seem to have devoted themselves with a hearty will. We have dwelt at considerable length upon it, as evincing an energy and temper not usually attributed to Mexicans, and for the purpose of exhibiting a phase of character at once creditable to their resolution and manifesting a degree of independence and thriftiness worthy of imitation."

Several failures have occurred in the cotton factories of Mexico. The prohibitory system is persevered in; and, the prices of cotton cloths, especially, are enormously high. Mr. Thompson has a far less favourable opinion than Mr. Mayer of the manufactures of this republic.

CHAPTER XI.

COMMERCE OF MEXICO.

THE commerce of New Spain with the mother country was carried on almost entirely through Vera Cruz. In time of peace, Mr. Humboldt estimated the annual value of the exports, in that commerce, at 22,000,000 of dollars, and the annual value of the imports at 15,000,000 dollars. His statement of the articles are as follows:—

EXPORTS.	Dollars.	IMPORTS.	Dollars.
Gold and silver, in coin, bullion, and plate ..	17,000,000	Bale goods, including woollens, cottons, linens, and silks ..	9,200,000
Cochineal.....	2,400,000	Paper.....	1,000,000
Sugar.....	1,300,000	Brandy.....	1,000,000
Flour.....	300,000	Cacao.....	1,000,000
Inigo, being the produce of Nuevo Espana.....	280,000	Quicksilver.....	650,000
Salt meat and other provisions	100,000	Iron, manufactured and unmanufactured.....	600,000
Tanned hides.....	80,000	Steel.....	200,000
Sarsaparilla.....	90,000	Wine.....	700,000
Vanilla.....	60,000	Bees'-wax	300,000
Jalap.....	60,000		
Soap.....	50,000		
Logwood.....	40,000		
Pimento	30,000		
	21,790,000		14,000,000

This statement, however, must be considered as a mere approximation, which Humboldt, founded on the average of several years of peace, and therefore more applicable to the period antecedent to 1796, when the war with England broke out. Humboldt does not include, in this estimate, the contraband trade on the sea coast, and he has also omitted the indigo imported from Guatemala, and the cacao of Guayaquil, though exported from Vera Cruz, because these articles were not the produce of that kingdom.

The difficulty of intercourse at times was so great, that from Acapulco to Lima the passage was sometimes longer than from Lima to Cadiz. Mexico and Peru, though at no great distance, were therefore incapable of maintaining any considerable commerce with each other. The old Acapulco Manilla ship arrived once a year at Acapulco with a cargo of Indian goods, valued at 1,200,000 or 1,300,000 dollars, and carried back silver in exchange, with a very small quantity of American produce, and some European goods.

The last *flota*, under the old system, sailed from Vera Cruz in 1778, and exported the produce of the four preceding years, which amounted in value to

	Dollars.
The exports of produce in 1787—90, the four first years after the new system was completely established, were valued at.....	11,394,604
Difference of the four years.....	8,924,642
Export of produce in { 1802.....	9,185,212
1803.....	5,128,283

The export of 1802 was not, probably, a fair comparison, as *that* was the first year of peace after the termination of a long war, in which the direct commerce with Spain had been in a great measure suspended. In 1803, the value of exports was more than double that of four years under the old system, and nearly equal to the exports of two years immediately after the introduction of a more open trade. This open trade must not be considered either a free trade, or a trade with a foreign country. It meant, in fact, an open trade with Spain. The trade with foreign countries was really *open* only after 1808, and it is now nearly closed by a prohibitory tariff.

Humboldt gives the following estimate of the total amount, including the contraband:

Annual value of importation of goods.....	Dollars.
— exportation of produce.....	20,000,000
	6,000,000
Balance to be discharged in money.....	14,000,000
Annual produce of the mines.....	23,000,000
Export of money on account of the crown, and of private individuals residing in Spain.....	8,000,000
Export to discharge the balance of trade.....	14,000,000
Money added to the circulation of the colony.....	1,000,000
	23,000,000

According to Humboldt the dollars imported into Nueva Espana and Guatemala, in 1803, amounted to 22,000,000; and the exports consisted of produce to the value of 9,000,000 dollars, besides 22,500,000 dollars in specie.

The commerce of Mexico has been diminishing for the last eighteen years. This is attributable to the continual revolutionary disturbances of the country, the decrease of the wealth of the people, and the pecuniary embarrassments to which most of the inhabitants have been subjected, by the non-payment of government loans, and of unfortunate investments.

In 1832 and 1833, the revenue of the custom house amounted to about 12,000,000 per annum. In 1839, on account of the French blockade, it fell to nearly 3,000,000; in 1840, it rose again to 7,000,000; and, in the following year, fell to little more than 5,000,000 which sum may be divided among the different ports as follows, to wit:

	Dollars.
Vera Cruz.....	3,329,802
Tampico.....	883,039
Matamoros.....	312,403
Marattan.....	383,159
Guyamas.....	55,814
Monterrey.....	96,853
Acapulco.....	17,182
San Blas.....	208,845
	<hr/> 5,287,097

This corresponds to about 12,300,000 dollars' value of importation annually divided (according to an estimate), in the following manner:—

	Dollars.
From England.....	4,500,000
„ France.....	3,000,000
„ Hamburg.....	1,500,000
„ China.....	1,000,000
„ United States.....	800,000
„ Spain.....	500,000
„ Genoa and other ports.....	1,000,000
	<hr/> 12,300,000

The expense to the government, for the collection of this revenue, was 348,290 dollars. These statements are exclusive of the contraband trade from the United States by Santa Fé, and by the English and Americans by the sea-coasts.

The exports from the whole republic (chiefly its own productions), may be rated as follows, viz.:—

E X P O R T S.		Amount.
		dollars.
Precious metals..	{ Specie, through Vera Cruz.....	4,000,000
	„ „ Mazatlan and San Blas.....	2,500,000
	{ Silver and gold, through other ports.....	5,000,000
	{ Silver, through Tampico.....	7,000,000
Cochineal, jalap, vanilla, sarsaparilla, and hides.....		1,000,000
Sundries.....		500,000
Total.....		<hr/> 20,000,000

From this estimate, about 18,500,000 dollars in the precious metals, are exported annually from Mexico. The mines produce near 22,000,000 of silver, of which, it is calculated, that 12,000,000 are coined in the seven mints of the republic per annum. There is a difference of about 8,000,000 dollars between the imports and exports, a large portion: all which is estimated to be covered by smuggling.

The following comparative estimate of the exports and imports of the United States and of Mexico, for the years 1841 and 1842, cannot fail to be interesting in this connexion, especially when the comparative extent of territory and population is taken into consideration:

EXPORTS.	Amount.	Amount.
	dollars.	dollars.
Exports from Mexico in 1842	20,000,000
Of which, in gold and silver	18,500,000
Balance in other products of industry	1,500,000
Excess of imports over the industrial exports, exclusive of the precious metals.....	10,500,000
Imports of the United States in 1811—2	99,357,329
Exports from " " "	104,117,969
Difference....	4,760,640
Exports of gold and silver	9,805,235
Of which was the produce of U. S. Mines	2,746,486	
" foreign gold.....	677,297	
" foreign silver.....	6,381,452	
Total....	9,805,235	
Total exports from the United States	104,117,969
Deduct exports of the precious metals.....	9,805,235
		94,312,734

The United States exported 94,312,734 dollars' value, representing her industry (exclusive of gold and silver), while Mexico, with a territory nearly as large, exported but 1,500,000 dollars. In addition to this, it must be recollected, that but 2,746,846 dollars of the precious metals were the product of the United States, while at least 15,000,000 dollars were the product of the Mexican mines; leaving an excess of nearly 3,000,000 above the total annual coinage of the nation.

	dollars.
Whole value of exports, say for 8,000,000 inhabitants ..	20,000,000
" " 17,000,000 " ..	104,117,969

This will give the ratio of about 6 dollars 12½ cents for each person in the United States, and 2 dollars 50 cents for each person in Mexico.

The contraband trade of Mexico has been carried on there with the utmost audacity; statistical returns must therefore be imperfect.

TRADE OF THE SEA PORTS.

We have observed that there are no great navigable rivers, and few good harbours. Not a mile of any Mexican river is navigated by steamboats. Probably not 600 miles of all the rivers in the empire could be navigated by the smallest steam vessels—nor is there a railroad in Mexico. It is asserted that there is not one in any country in which the Spanish language was spoken. We believe not one in 1846. Nearly all European trade passes through Vera Cruz and Tampico. The backs of mules are the means of transport.

PORT OF VERA CRUZ.—This port is far from being a good harbour. It is rather a roadstead. The little island of St. Juan de Ulloa, which is entirely covered with the immense fortress, is 500 or 600 yards from the mole of Vera Cruz, between which points all the commercial shipping anchors. It frequently occurs that violent north winds (called "los nortes," or northers) drive the vessels on shore, and even seriously damage the mole. The anchorage is bad. There is a brilliant revolving light, eighty feet above the level of the sea, on the north-west point of the island. Foreign ships of war anchor about three miles below, near the island of Sacrificios. A very narrow channel affords the only passage for ships of war, which must consequently pass immediately under the guns of the fort. The fortress of St. Juan de Ulloa has always been considered as one of the strongest in the world. When it was blown up in 1839, by the French, its garrison was wretched. Even then it would not have been so readily

taken had it not been for the accidental explosion of the powder magazine. It is at present, August, 1846, blockaded by the United States. Mr. Thompson says,

"Vera Cruz is much more effectually protected than by all her fortifications, by the northerns and vomito (the yellow fever). The former have been the terror of all seamen since the discovery of the country. The latter prevails on all the Atlantic coast of Mexico during the whole year, and with the greatest malignancy, for two-thirds of the year; and it so happens, that the few months of comparative exemption from the ravages of the yellow fever are precisely those when the *northerns prevail* with the most destructive violence.

"I can see no advantage which could be gained by getting possession of Vera Cruz which would be at all commensurate with the loss of life, from disease alone, in retaining it. It is not the only port which Mexico possesses; and if it were, there is no country in the world which would be so little injured by cutting off all its foreign commerce, for there is no single want of civilised man which Mexico is not capable of furnishing. The town, it is true, might be destroyed, and heavy losses and much individual suffering be caused, but these are amongst the painful and deplorable consequences, not the legitimate objects of honourable war."

The present city of Vera Cruz is not the same which was built by Cortez in 1519, and which was the first European settlement in America. The *Villa Rica de la Vera Cruz*, the rich town of the true cross, is distant about six miles from the present city. Vera Cruz is described as rather a neatly built town, with broad and tolerably clean streets.

Mr. Thompson, who gives the last account of it, says,

"It would no doubt be as healthy as any other place in the same latitude and climate, if it were not for some large swamps in the rear of the city. The vomito is by no means the only, nor do I think it the most fatal of the diseases which prevail there. The bills of mortality in some years exhibit a great number of deaths from some other diseases, whilst in other years much the greatest number die of vomito."

COMMERCE of the Port of Vera Cruz.

REMARKS.—The value of foreign importations cannot be obtained at the custom-house, where no account of them is kept: nor are foreign merchants at all disposed to give any such information.

The PORT OF TAMPICO has a bar at both the entrance of Boca del Rio and Brazo de Santiago, and they only admit small brigs and lesser vessels; but the rivers which flow into the lagoon are to some extent navigable. It is quite or nearly as unhealthy as Vera Cruz.

FOREIGN Trade of Tampico, from the 1st of January to the 31st of December, 1841.

* Chiefly specie.

† Including specie.

The PORT OF MATAMOROS is formed by the Rio Bravo del Norte, and is forty miles distant from the town, where the custom-house is. There are two harbours, viz., the Brazo de Santiago, and the Boca del Rio; which latter is about nine miles to the southward of the former. Both are obstructed by a bar; that of the Brazo having usually from eight to ten feet water over it; and that of the Boca del Rio, from four to six feet. These bars are impassable during any strong wind. The anchorage in both harbours is fair, in three to five fathoms; but there is no perfect security for vessels during the gales so frequent in August and September. Vessels cannot come up the river to the town. In the Brazo, they unload by means of lighters; and in the Boca del Rio, they discharge on the banks of the river. The tide rises and falls but a few inches.

There is no lighthouse, and the coast is very flat. The best indication to an arriving vessel of her proximity to the port, is the discolouration of the water caused by the river, and which extends to some distance at sea.

On the arrival of a vessel off either harbour, the pilot goes out to her, if the bar be not too rough. A custom-house officer receives all the papers, giving to the captain a receipt for the same.

The whole trade of Matamoras in 1841, was carried on in vessels from the United States—Vessels, 32; tonnage, 2345.

"Exchange of Money, Weights, and Measures.—1 dollar = 8 rials, 1 rial = 2 medios.

"The currency of the place, "*dinero provisional*," although it consists precisely of the same denominations, is worth $2\frac{1}{2}$ per cent less than the new Mexican dollar, which is the only coin exported or received at the Custom-house. That is to say, $2\frac{1}{2}$ per cent is the premium paid on the spot, in exchanging one for the other. But the difference between the intrinsic value of the two coins is, I understand, much greater.

1 quintal = 4 arrobas = 100 lbs. Spanish; 100 Spanish lbs. = 101.75 lbs. English.

1 vara = 36 inches, 108 varas = 100 English yards.

Pilotage.—At the Boca del Rio, five dollars per foot draught of water. At the Brazo de Santiago, three dollars per foot draught of water.

A bill of health is always required.

Charges and Dues for Lights, Buoys, Quays, Wharfs, &c.—None.

PORTS OF THE PACIFIC.

ACAPULCO, or LOS REYES, is situated on the coast of the South Sea. Its inhabitants formerly consisted of nearly 400 families of Chinese, mulattoes, and negroes. The greater part of the town is on the sea shore. The air is extremely hot and moist, independent of its being in the torrid zone, it is entirely shut out from the north winds, being surrounded by lofty *serrania*. These circumstances render it very unhealthy, especially in the wet season, on account of the damps and sea-

winds blowing from the south-east to the great detriment of the inhabitants and merchants who come to trade here; this being the principal cause why scarcely any Spanish families ever resided here. Owing to the barren state of the land it is forced to seek its necessary supplies from the Indian settlements. The only commerce which it can be said to have ever had was a fair, held on the arrival of the galleons formerly from China; and when those departed there were no other means for the people of maintaining a trade. At the distance of a musket-shot, and on a promontory running far into the sea, is situate the castle and royal fort of San Diego, mounted with artillery. The port is safe, and so spacious that 500 ships can lay at anchor in it with ease. It is surrounded by lofty rising grounds. Its principal mouth is on the south side, formed by an island of an oblong figure, and somewhat inclining to the south-west. The same island forms also another mouth, which they call chica, or little. The canals on either side of the island are twenty-five fathoms deep. The chief trade of Acapulco was its commerce with Manilla. Lat., according to Humboldt, 16 deg. 50 min. 29 sec.; long. by ditto, 99 deg. 46 min. Lat., according to the Spaniards, 16 deg. 50 min. 30 sec.; long. by ditto, 100 deg. Both longitudes being measured from the meridian of Greenwich.

The Ports of SAN BLAS and MAZATLAN are the other principal ports; as harbours, neither are good. We have already given all the information we could obtain relative to the ports and trade of San Francisco and California.

Gross Return of British and Foreign Trade at the Port of San Blas, during the Year ending the 31st of December, 1845.

STATEMENT of all Port Dues and other Charges on Foreign Shipping at the principal Ports of the Mexican Republic.

PORTS.	Tonnage Duty.	Water Dues.	Pilotage.	Ballast Charge.	Bill of Health.	Fee to Captain of the Port.	Stamps.
	dollars.	dollars.	dollars.	dollars.	dollars.	dollars.	dollars.
Vera Cruz.....	1½	one-eighth per ton.	38½ each ship.	55 per barge load of 25 tons.	10	8½
Tampico.....	1½	2 per 9 feet measurement.	1 per ton.	10	10	..
Matamoros.....	1½	gratification to pilot 16½	6	8
San Blas.....	1½	16, and for shifting their ship each time, 4	..
Mazatlan.....							
Guyamas.....	1½

REMARKS.—Whether a ship takes a pilot or not, the pilotage money is exacted on foreign shipping. The charge for ballast is exorbitant, and presses severely on owners of foreign vessels. The supply for ballast is a monopoly in the hands of barge proprietors. No foreign ship is allowed to convey its own ballast from the beach, which is all sand, and superabundant. Could the Mexican government be prevailed on to permit each ship to ballast with its own boats, it would have the effect of reducing the price of ballast, and would prove a great relief to British ship owners. Vouchers are not given in all cases. Vouchers are here given only on water dues, pilotage, and bill of health; the exceptions being on tonnage duty, fees to captain of the port, and stamps. There are no lights on the coast in this vicinity. Any assistance afforded to vessels in distress is an enormous and extra charge, at the will or caprice of the solitary pilot establishment at the bar, which is not under the control of the government. Vouchers are given by the custom-house on payment of the tonnage duty, and for the captain of the port for fees levied by him.

The dues here specified are exacted on all foreign vessels whatever, and under every circumstance, whether loaded or in ballast, when calling for orders or for supplies. Every vessel letting go her anchor in the harbours or roadstead, even if there is no cargo on board, is subject to these dues; and if loaded the cargo must all be discharged, whether destined for that port, or any other place whatever. There are no light-houses, buoys, or moorings, nor any establishment of pilots on the west coast of Mexico; nor are any services rendered or advantages existing which would warrant the exorbitant tonnage dues and charges exacted.

No advantages are enjoyed by foreign vessels from which British vessels are excluded. Mexican vessels employed in the coasting trade are exempted from all the charges specified in this statement. No foreign vessels are permitted to carry on the coasting trade.

BRITISH CONSULATE, *Mexico*, 30th of May, 1845.

No country imposes such enormous charges on shipping as Mexico. For instance:

Tampico, the 28th of November, 1844.

JAMES WILLIAM GLASS, (*Consul*).

CHAPTER XII.

TREATIES OF AMITY, COMMERCE, AND NAVIGATION, BETWEEN THE GOVERNMENT OF THE UNITED STATES AND THE GOVERNMENTS OF THE SPANISH AMERICAN REPUBLICS.

Treaty with the United States of Mexico.

ARTICLE I.—There shall be perpetual amity between the dominions and subjects of his Majesty, the King of the United Kingdom of Great Britain and Ireland, and the United States of Mexico, and their citizens.

ARTICLE II.—There shall be, between all the territories of his Britannic Majesty in Europe and the territories of Mexico, a reciprocal freedom of commerce. The inhabitants of the two countries respectively, shall have liberty freely and securely to come, with their ships and cargoes to all places, ports, and rivers in the territories aforesaid, saving only such particular ports to which other foreigners shall not be permitted to come, to enter into the same, and to remain, and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and, generally, the merchants and traders of each nation, respectively, shall enjoy the most complete protection and security for their commerce.

In like manner, the respective ships of war, and post-office packets of the two countries, shall have liberty freely and securely to come to all harbours, rivers, and places, saving only such particular ports (if any) to which other foreign ships of war and packets shall not be permitted to come, to enter into the same, to anchor, and to remain there and refit; subject always to the laws and statutes of the two countries, respectively.

By the right of entering the places, ports, and rivers mentioned in this article, the privilege of carrying on the coasting trade is not understood, in which national vessels only are permitted to engage.

ARTICLE III.—His Majesty the King of the United Kingdom of Great Britain and Ireland, engages further, that the inhabitants of Mexico shall have the like liberty of commerce and navigation stipulated for in the preceding article, in all his dominions situated out of Europe, to the full extent in which the same is permitted at present, or shall be permitted hereafter, to any other nation.

ARTICLE IV.—No higher or other duties shall be imposed on the importation into the dominions of his Britannic Majesty, of any article of the growth, produce, or manufacture of Mexico, and no other or higher duties shall be imposed on the importation into the territories of Mexico, of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any foreign country; nor shall any other or higher duties or charges be imposed in the territories or dominions of either of the contracting parties, on the exportation of any articles to the territories of the other, than such as are or may be payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation of any articles the growth, produce, or manufacture of his Britannic Majesty's dominions, or of the said territories of Mexico, to or from the said dominions of his Britannic Majesty, or to or from the said territories of Mexico, which shall not equally extend to all other nations.

ARTICLE V.—No higher or other duties or charges on account of tonnage, light or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges, shall be imposed, in any of the ports of Mexico, on British vessels, than those payable, in the same ports, by Mexican vessels; nor, in the ports of his Britannic Majesty's territories, on Mexican vessels, than shall be payable, in the same ports, on British vessels.

ARTICLE VI.—The same duties shall be paid on the importation into the territories of Mexico, of any article the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such importation shall be in Mexican or in British vessels; and the same duties shall be paid on the importation into the dominions of his Britannic Majesty, of any article the growth, produce, or manufacture of Mexico, whether such importation shall be in British or in Mexican vessels. The same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation to Mexico of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such exportation shall be in Mexican or in British vessels; and the same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation of any articles the growth, produce, or manufacture of Mexico, to his Britannic Majesty's dominions, whether such exportation shall be in British or in Mexican vessels.

ARTICLE VII.—In order to avoid any misunderstanding with respect to the regulations which may respectively constitute a British or Mexican vessel, it is hereby agreed that all vessels built in the dominions of his Britannic Majesty, or vessels which shall have been captured from an enemy by his Britannic Majesty's ships of war, or by subjects of his said Majesty, furnished with letters of mark by the Lords Commissioners of the Admiralty, and regularly condemned in one of his said

Majesty's prize courts as a lawful prize, or which shall have been condemned in any competent court for the breach of the laws made for the prevention of the slave-trade, and owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels: and that all vessels built in the territories of Mexico, or captured from the enemy by the ships of Mexico, and condemned under similar circumstances, and which shall be owned by any citizen or citizens thereof, and whereof the master and three-fourths of the mariners are citizens of Mexico, excepting where the laws provide for any extreme cases, shall be considered as Mexican vessels.

And it is further agreed, that every vessel, qualified to trade as above described, under the provisions of this treaty, shall be furnished with a register, passport, or sea-letter, under the signature of the proper person authorised to grant the same, according to the laws of the respective countries (the form of which shall be communicated), certifying the name, occupation, and residence of the owner or owners, in the dominions of his Britannic Majesty, or in the territories of Mexico, as the case may be; and that he, or they, is, or are, the sole owner or owners, in the proportion to be specified; together with the name, burden, and description of the vessel, as to build and measurement; and the several particulars constituting the national character of the vessel, as the case may be.

ARTICLE VIII.—All merchants, commanders of ships, and others, the subjects of his Britannic Majesty, shall have full liberty, in all the territories of Mexico, to manage their own affairs themselves, or to commit them to the management of whomsoever they please, as broker, factor, agent, or interpreter; nor shall they be obliged to employ any other persons for those purposes than those employed by Mexicans, nor to pay them any other salary or remuneration than such as is paid, in like cases, by Mexican citizens; and absolute freedom shall be allowed, in all cases, to the buyer and seller, to bargain and fix the price of any goods, wares, or merchandise, imported into, or exported from Mexico, as they shall see good, observing the laws and established customs of the country. The same privileges shall be enjoyed in the dominions of his Britannic Majesty, by the citizens of Mexico, under the same conditions.

The citizens and subjects of the contracting parties, in the territories of each other, shall receive and enjoy full and perfect protection for their persons and property, and shall have free and open access to the courts of justice in the said countries, respectively, for the prosecution and defence of their just rights; and they shall be at liberty to employ, in all causes, the advocates, attorneys, or agents of whatever description, whom they may think proper; and they shall enjoy, in this respect, the same rights and privileges therein, as native citizens.

ARTICLE IX.—In whatever relates to the succession to personal estates, by will or otherwise, and the disposal of personal property of every sort and denomination, by sale, donation, exchange, or testament, or in any other manner whatsoever, as also the administration of justice, the subjects and citizens of the two contracting parties shall enjoy, in their respective dominions and territories, the same privileges, liberties, and rights, as native subjects; and shall not be charged, in any of these respects, with any higher imposts or duties than those which are paid, or may be paid, by the native subjects, or citizens of the power in whose dominions or territories they may be resident.

ARTICLE X.—In all that relates to the police of the ports, the lading and unlading of ships, the safety of merchandise, goods, and effects, the subjects of his Britannic Majesty, and the citizens of Mexico, respectively, shall be subject to the local laws and regulations of the dominions and territories in which they may reside. They shall be exempted from all compulsory military service, whether by sea or land. No forced loans shall be levied upon them; nor shall their property be subject to any other charges, requisitions, or taxes, than such as are paid by the native subjects or citizens of the contracting parties in their respective dominions.

ARTICLE XI.—It shall be free for each of the two contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party: but, before any consul shall act as such, he shall, in the usual form, be approved and admitted by the government to which he is sent; and either of the contracting parties may except from the residence of consuls such particular places as either of them may judge fit to be excepted. The Mexican diplomatic agents and consuls shall enjoy, in the dominions of his Britannic Majesty, whatever privileges, exceptions, and immunities are or shall be granted to agents of the same rank belonging to the most favoured nation: and, in like manner, the diplomatic agents and consuls of his Britannic Majesty in the Mexican territories shall enjoy, according to the strictest reciprocity, whatever privileges, exceptions, and immunities are or may be granted to the Mexican diplomatic agents and consuls in the dominions of his Britannic Majesty.

ARTICLE XII.—For the better security of commerce between the subjects of his Britannic Majesty and the citizens of the Mexican states, it is agreed that if, at any time, any interruption of friendly intercourse, or any rupture should unfortunately take place between the two contracting parties, the merchants residing upon the coasts shall be allowed six months, and those of the interior a whole year, to wind up their accounts, and dispose of their property; and that a safe conduct shall be given them to embark at the port which they shall themselves select. All those who are established in the respective dominions and territories of the two contracting parties, in

the exercise of any trade or special employment, shall have the privilege of remaining and continuing such trade and employment therein, without any manner of interruption, in full enjoyment of their liberty and property, as long as they behave peaceably, and commit no offence against the laws; and their goods and effects, of whatever description they may be, shall not be liable to seizure or sequestration, or to any other charges or demands than those which may be made upon the like effects or property, belonging to the native subjects or citizens of the respective dominions or territories in which such subjects or citizens may reside. In the same case, debts between individuals, public funds, and the shares of companies, shall never be confiscated, sequestered, or detained.

ARTICLE XIII.—The subjects of his Britannic Majesty, residing in the Mexican territories, shall enjoy, in their houses, persons and properties, the protection of the government; and, continuing in possession of what they now enjoy, they shall not be disturbed, molested, or annoyed in any manner, on account of their religion, provided they respect that of the nation in which they reside, as well as the constitution, laws, and customs of the country. They shall continue to enjoy, to the full, the privilege already granted to them of burying, in the places already assigned for that purpose, such subjects of his Britannic Majesty as may die within the Mexican territories; nor shall the funerals and sepulchres of the dead be disturbed in any way, or upon any account. The citizens of Mexico shall enjoy, in all the dominions of his Britannic Majesty, the same protection, and shall be allowed the free exercise of their religion, in public or private, either within their own houses, or in the chapels and places of worship set apart for that purpose.

ARTICLE XIV.—The subjects of his Britannic Majesty shall, on no account or pretext whatsoever, be disturbed or molested in the peaceable possession and exercise of whatever rights, privileges, and immunities they have at any time enjoyed within the limits described and laid down in a convention, signed between his said Majesty and the King of Spain, on the 14th of July, 1786; whether such rights, privileges, and immunities shall be derived from the stipulations of the said convention, or from any other concession which may at any time have been made by the King of Spain, or his predecessors, to British subjects and settlers residing and following their lawful occupations within the limits aforesaid: the two contracting parties reserving, however, for some more fitting opportunity the further arrangements on this article.

ARTICLE XV.—The government of Mexico engages to co-operate with his Britannic Majesty for the total abolition of the slave-trade, and to prohibit all persons inhabiting within the territories of Mexico, in the most effectual manner, from taking any share in such trade.

ARTICLE XVI.—The two contracting parties reserve to themselves the right of treating and agreeing hereafter, from time to time, upon such other articles as may appear to them to contribute still further to the improvement of their mutual intercourse, and the advancement of the general interests of their respective subjects and citizens; and such articles as may be so agreed upon, shall, when duly ratified, be regarded as forming a part of the present treaty, and shall have the same force as those now contained in it.

ARTICLE XVII.—The present treaty shall be ratified, and the ratifications shall be exchanged at London, within the space of six months, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the twenty-sixth day of December, in the year of our Lord one thousand eight hundred and twenty-six.

(L.S.) WILLIAM HUSKISSON.
(L.S.) JAMES J. MORIER

Additional Articles.

ARTICLE I.—Whereas, in the present state of Mexican shipping, it would not be possible for Mexico to receive the full advantage of the reciprocity established by the Articles V., VI., VII. of the Treaty signed this day, if that part of the VIIIth Article which stipulates that, in order to be considered as a Mexican ship, a ship shall actually have been built in Mexico, should be strictly and literally observed, and immediately brought into operation—it is agreed that, for the space of ten years, to be reckoned from the date of the exchange of the ratifications of this treaty, any ships, whosoever built, being *bonâ fide* the property of, and wholly owned by one or more citizens of Mexico, and whereof the master and three-fourths of the mariners, at least, are also natural born citizens of Mexico, or persons domiciliated in Mexico, by act of the government, as lawful subjects of Mexico, to be certified according to the laws of that country, shall be considered as Mexican ships; his Majesty the King of the United Kingdom of Great Britain and Ireland reserving to himself the right, at the end of the said term of ten years, to claim the principle of reciprocal restriction stipulated for in the Article VII. above referred to, if the interests of British navigation shall be found to be prejudiced by the present exception to that reciprocity, in favour of Mexican shipping.

ARTICLE II.—It is further agreed that, for the like term of ten years, the stipulations contained

in Articles V. and VI. of the present treaty, shall be suspended; and, in lieu thereof, it is hereby agreed that, until the expiration of the said term of ten years, British ships entering into the ports of Mexico from the United Kingdom of Great Britain and Ireland, or any of his Britannic Majesty's dominions, and all articles the growth, produce, or manufacture of the United Kingdom, or, of any of the said dominions, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation: and, reciprocally, it is agreed that Mexican ships entering into the ports of the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, from any port of the states of Mexico, and all articles the growth, produce, or manufacture of the said states, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships and the like goods, the growth, produce, or manufacture of the most favoured nation; and that no higher duties shall be paid, or bounties or drawbacks allowed, on the exportation of any article the growth, produce, or manufacture of the dominions of either country, in the ships of the other, than upon the exportation of the like articles in the ships of any other foreign country.

It being understood that, at the end of the said term of ten years, the stipulations of the said Vth and VIth Articles shall, from thenceforward, be in full force between the two countries.

The present additional articles shall have the same force and validity as if they were inserted, word for word, in the treaty signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

Treaty of Amity, Commerce, and Navigation, between His Majesty and the United Provinces of Rio de la Plata. Signed at Buenos Ayres, February 2, 1825.

ARTICLE I. There shall be perpetual amity between the dominions and subjects of his Majesty the King of the United Kingdom of Great Britain and Ireland, and the United Provinces of Rio de la Plata and their inhabitants.

ARTICLE II. There shall be, between all the territories of his Britannic Majesty in Europe, and the territories of the United Provinces of Rio de la Plata, a reciprocal freedom of commerce. The inhabitants of the two countries, respectively, shall have liberty freely and securely to come, with their ships and cargoes, to all such places, ports, and rivers, in the territories aforesaid, to which other foreigners are or may be permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and, generally, the merchants and traders of each nation, respectively, shall enjoy the most complete protection and security for their commerce; subject always to the laws and statutes of the two countries respectively.

ARTICLE III. Same as third article in Mexican treaty.

ARTICLE V. No higher or other duties or charges on account of tonnage, light, or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges, shall be imposed, in any of the ports of the said United Provinces, on British vessels of the burthen of above 120 tons, than those payable in the same ports by vessels of the said United Provinces of the same burthen; nor in the ports of any of his Britannic Majesty's territories, on the vessels of the United Provinces of above 120 tons, than shall be payable in the same ports on British vessels of the same burthen.

ARTICLE VI. Same as in Mexican treaty.

ARTICLE VII. In order to avoid any misunderstanding with respect to the regulations which may respectively constitute a British vessel or a vessel of the said United Provinces, it is hereby agreed that all vessels built in the dominions of his Britannic Majesty, and owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built in the territories of the said United Provinces, properly registered and owned by the citizens thereof, or any of them, and whereof the master and three-fourths of the mariners, at least, are citizens of the said United Provinces, shall be considered as vessels of the said United Provinces.

ARTICLE VIII.—All merchants, commanders of ships, and others the subjects of his Britannic Majesty, shall have the same liberty in all the territories of the said United Provinces as the natives thereof, to manage their own affairs themselves, or to commit them to the management of whomsoever they please as broker, factor, agent, or interpreter; nor shall they be obliged to employ any other persons for those purposes, nor to pay them any salary or remuneration unless they shall choose to employ them; and absolute freedom shall be allowed, in all cases, to the buyer and seller to bargain and fix the price of any goods, wares, or merchandise imported into, or exported from, the said United Provinces, as they shall see good.

ARTICLE IX.—In whatever relates to the lading and unlading of ships, the safety of merchandise, goods, and effects, the disposal of property of every sort and denomination, by sale, donation, or exchange, or in any other manner whatsoever, as also the administration of justice, the subjects and citizens of the two contracting parties shall enjoy, in their respective dominions, the same

privileges, liberties, and rights as the most favoured nation, and shall not be charged, in any of these respects, with any higher duties or imposts than those which are paid, or may be paid by the native subjects or citizens of the power in whose dominions they may be resident. They shall be exempted from all compulsory military service whatsoever, whether by sea or land, and from all forced loans or military exactions or requisitions; neither shall they be compelled to pay any ordinary taxes under any pretext whatsoever, greater than those that are paid by native subjects or citizens.

ARTICLE X.—It shall be free for each of the two contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but before any consul shall act as such he shall, in the usual form, be approved and admitted by the government to which he is sent; and either of the contracting parties may except from the residence of consuls such particular places as either of them may judge fit to be so excepted.

ARTICLE XI.—For the better security of commerce between the subjects of his Britannic Majesty and the inhabitants of the United Provinces of Rio de la Plata, it is agreed that if at any time any interruption of friendly commercial intercourse, or any rupture should unfortunately take place between the two contracting parties, the subjects or citizens of either of the two contracting parties residing within the dominions of the other shall have the privilege of remaining and continuing their trade therein, without any manner of interruption, so long as they behave peaceably and commit no offence against the laws; and their effects and property, whether intrusted to individuals or to the state, shall not be liable to seizure or sequestration, or to any other demands than those which may be made upon the like effects or property belonging to the native inhabitants of the state in which such subjects or citizens may reside.

ARTICLE XII.—The subjects of his Britannic Majesty residing in the United Provinces of Rio de la Plata shall not be disturbed, persecuted, or annoyed on account of their religion, but they shall have perfect liberty of conscience therein, and to celebrate divine service either within their own private houses or in their own particular churches or chapels, which they shall be at liberty to build and maintain in convenient places, approved of by the government of the said United Provinces: liberty shall also be granted to bury the subjects of his Britannic Majesty who may die in the territories of the said United Provinces in their own burial places, which, in the same manner, they may freely establish and maintain. In the like manner, the citizens of the said United Provinces shall enjoy, within all the dominions of his Britannic Majesty, a perfect and unrestrained liberty of conscience, and of exercising their religion publicly or privately, within their own dwelling-houses or in the chapels and places of worship appointed for that purpose, agreeably to the system of toleration established in the dominions of his said majesty.

ARTICLE XIII.—Same as ninth article in Mexican treaty.

ARTICLE XIV.—His Britannic Majesty being extremely desirous of totally abolishing the slave trade, the United Provinces of Rio de la Plata engage to co-operate with his Britannic Majesty for the completion of so beneficent a work, and to prohibit all persons inhabiting within the said United Provinces, or subject to their jurisdiction, in the most effectual manner and by the most solemn laws from taking any share in such trade.

*Treaty of Amity, Commerce, and Navigation, between Great Britain and Colombia.
Signed at Bogota, 18th April, 1825.*

ARTICLE I.—There shall be perpetual, firm, and sincere amity between the dominions and subjects of his Majesty the King of the United Kingdom of Great Britain and Ireland, his heirs and successors, and the state and people of Colombia.

ARTICLE II.—There shall be between all the territories of his Britannic Majesty in Europe and the territories of Colombia a reciprocal freedom of commerce. The subjects and citizens of the two countries, respectively, shall have liberty freely and securely to come, with their ships and cargoes, to all such places, ports, and rivers, in the territories aforesaid, to which other foreigners are or may be permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and, generally, the merchants and traders of each nation respectively shall enjoy the most complete protection and security for their commerce, subject always to the laws and statutes of the two countries respectively.

ARTICLES III., IV., V., and VI.—Same as in Mexican treaty.

ARTICLE VII.—In order to avoid any misunderstanding with respect to the regulations which may respectively constitute a British or a Colombian vessel, it is hereby agreed that all vessels built in the dominions of his Britannic Majesty and owned by British subjects, or by any of them, and whereof the master and three-fourths of the mariners, at least, are British subjects, excepting where the laws provide for any extreme case, shall be considered as British vessels; and that all vessels built in the territories of Colombia, and owned by the citizens thereof, or any of them, and whereof the master and three-fourths of the mariners, at least, are Colombian citizens, excepting where the laws provide for any extreme cases, shall be considered as Colombian vessels.

ARTICLES VIII., IX., X., XI., and XII.—Same as in treaty with Buenos Ayres.

ARTICLE XIII.—The government of Colombia engages to co-operate with his Britannic Majesty for the total abolition of the slave trade, and to prohibit all persons inhabiting within the territories of Colombia, in the most effectual manner, from taking any share in such trade.

ARTICLE XIV.—And forasmuch as it would be convenient and useful for the purpose of facilitating the mutual good understanding between the two contracting parties, and for avoiding all difficulties henceforward, that other articles should be proposed and added to the present treaty, which articles, both from a want of due time for their consideration, as well as from the pressure of circumstances, cannot at present be drawn up with required perfection, it has been and is agreed, on the part of both powers, that they will, with the least possible delay, come forward to treat and agree upon such articles as may be wanting to this treaty and deemed mutually beneficial, and which articles, when they shall be agreed upon and shall be duly ratified, shall form part of the present treaty of amity, commerce, and navigation.

Additional Article.

Whereas in the present state of the Colombian shipping, it would not be possible for Colombia to take advantage of the reciprocity established by Articles V., VI., and VII. of the treaty signed this day, if that part should be carried into immediate effect which stipulates that in order to be considered a Colombian ship a ship shall actually have been built in Colombia—it is agreed that for the space of seven years, to be reckoned from the date of the ratification of this treaty, any ships, wheresoever built, being *bonâ fide* the property of any of the citizens of Colombia, and whereof the master and three-fourths of the mariners, at least, are also Colombian citizens excepting where the laws provide for any extreme cases, shall be considered as Colombian ships;—his Majesty the King of the United Kingdom of Great Britain and Ireland reserving to himself the right, at the end of the said term of seven years, to claim the principle of reciprocal restriction stipulated for in Article VII. above referred to, if the interests of British navigation shall be found to be prejudiced by the present exception to that reciprocity, in favour of Colombian shipping.

The present additional article shall have the same force and validity as if it were inserted, word for word, in the treaty signed this day. It shall be ratified, and the ratification shall be exchanged at the same time.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Convention between His Majesty and the State of Venezuela. Signed at London, 29th October, 1834.

Whereas a treaty of amity, commerce, and navigation, consisting of fifteen articles, was concluded between his Majesty the King of the United Kingdom of Great Britain and Ireland and the state of Colombia, which said treaty, together with an additional article thereto, was signed at Bogotá, on the 18th day of April, 1825; and whereas, after reciting that extensive commercial intercourse having been established for a series of years between the dominions of his Britannic Majesty in Europe and the several provinces and countries of America which (then united) constituted the state of Colombia, it seemed good for the security as well as encouragement of such commercial intercourse, and for the maintenance of good understanding between his said Britannic Majesty and the said state, that the relations then subsisting between them should be regularly acknowledged and confirmed by the signature of a treaty of amity, commerce, and navigation; it was in and by the said treaty declared and agreed that, under certain regulations and conditions therein specified, there should be reciprocal freedom of commerce between the territories of his Britannic Majesty in Europe and the territories of Colombia: and whereas at the signing of the said treaty, the provinces of Venezuela were united with, and formed a component part of, the state of Colombia, but have since that time finally and entirely separated themselves therefrom, and from all other countries or provinces then or now united therewith, and have become a separate and independent state under a distinct government: and whereas it is desirable that the commercial relations or intercourse now or lately subsisting between the territories of his Britannic Majesty in Europe and the territories of the state of Venezuela respectively, should continue and be carried on in the same manner, and under the same regulations and conditions as are expressed and specified in the aforesaid treaty between his said majesty and the state of Colombia, and that his majesty should acknowledge the independence of the said state of Venezuela; it has been accordingly agreed to conclude a convention for the purposes aforesaid.

ARTICLE I.—His Majesty the King of the United Kingdom of Great Britain and Ireland and the state of Venezuela, the independence of which state is hereby acknowledged, recognised, and declared by his said majesty, mutually agree to adopt and confirm, as effectually as if the same were inserted word for word therein, the several articles and provisions of the aforesaid treaty con-

cluded between his said Majesty and the state of Colombia, together with the aforesaid additional article thereto: and that all the matters and things contained in such treaty and additional article shall, *mutatis mutandis*, from and after the conclusion of the present convention, be applied to the high contracting parties, their subjects and citizens, as effectually as if they were recited word for word herein; confirming and approving hereby all matters and things done or to be done by their respective subjects and citizens, under the aforesaid treaty, and in execution thereof.

ARTICLE II.—The high contracting parties further mutually agree to adopt and confirm, as part of the present convention, as effectually as if the same were inserted word for word herein, the declaration explanatory of that part of the VIIth article of the aforesaid treaty concluded between his Britannic Majesty and the state of Colombia, wherein it was defined what ships should be considered as entitled to the privileges of British and Colombian ships, which declaration was signed at London on the 7th day of November, 1825, by the Right Honourable George Canning, then his Britannic Majesty's Principal Secretary of State for Foreign Affairs, on behalf of his said majesty, and by Señor Manuel José Hurtado, plenipotentiary of the state of Colombia, on behalf of the said state; and that the said declaration, and the several provisions therein contained shall, from and after the ratification of the present convention, *mutatis mutandis*, be applied to his said majesty and his subjects, and to the said state of Venezuela and its citizens, as effectually as if the same were inserted word for word herein.

PERU.

Treaty of Amity, Commerce, and Navigation, between his Britannic Majesty and the Peru-Bolivian Confederation. Signed at Lima, June 5, 1837.

ARTICLE I.—Extensive commercial intercourse having been established for some time between the dominions of his Britannic Majesty and the States which compose the Peru-Bolivian Confederation, it seems good for the security as well as the encouragement of such commercial intercourse, and for the maintenance of good understanding between his Britannic Majesty and the said Confederation, that the relations now subsisting between them should be regularly acknowledged and confirmed by the signature of a treaty of amity, commerce, and navigation.

ARTICLES II., III., IV., V., VI., VII., VIII.—Same as in Mexican treaty.

ARTICLE IX.—In whatever relates to the police of the ports, the lading and unlading of ships, the safety of merchandise, goods, and effects, the succession to personal estates by will or otherwise, and the disposal of personal property of every sort and denomination, by sale, donation, exchange, or testament, or in any other manner whatsoever, as also the administration of justice, the subjects and citizens of the two contracting parties shall enjoy, in their respective dominions and territories, the same privileges, liberties, and rights as native subjects; and shall not be charged, in any of these respects, with any higher imposts or duties than those which are paid, or may be paid, by the native subjects or citizens of the power in whose dominions or territories they may be resident; subject of course to the local laws and regulations of such dominions or territories.

In the event of any subject or citizen of either of the two contracting parties dying without will or testament, in the dominions or territories of the said contracting parties, the consul-general or consul of the said nation, or, in his absence, his representative, shall have the right to nominate curators, to take charge of the property of the deceased, so far as the laws of each country will permit, for the benefit of his lawful heirs and creditors, without interference, giving convenient notice thereof to the authorities of the countries.

ARTICLE X.—The subjects of his Britannic Majesty residing in the Peru-Bolivian Confederation, and the natives and citizens of the Peru-Bolivian Confederation residing in the dominions of his Britannic Majesty, shall be exempted from all compulsory military service whatsoever, whether by sea or land, and from all forced loans, or military exactions or requisitions; neither shall they be compelled under any pretext whatsoever, to pay any other ordinary charges, requisitions, or taxes greater than those that are paid by native subjects or citizens of the territories of the contracting parties, respectively.

ARTICLES XI. and XII.—Same as in Mexican treaty.

ARTICLE XIII.—The subjects of his Britannic Majesty, and the citizens of the Peru-Bolivian Confederation, respectively, shall enjoy in their houses, persons, and properties, the protection of the government, and continue in possession of the privileges which they now enjoy. And the subjects of his Britannic Majesty residing in the territories of the Peru-Bolivian Confederation, shall furthermore enjoy the most perfect and entire security of conscience, without being annoyed, prevented, or disturbed on account of their religious belief. Neither shall they be annoyed, mo-

lested, or disturbed in the proper exercise of their religion, provided that this take place in private houses, and with a decorum due to divine worship, with due respect to the laws, usages, and customs of the country. In the like manner, the citizens of the Peru-Bolivian Confederation shall enjoy, within all the dominions of his Britannic Majesty, a perfect and unrestrained liberty of conscience, and of exercising their religion publicly or privately, within their own dwelling-houses, or in the chapels and places of worship appointed for that purpose, agreeably to the system of toleration established in the dominions of his said Majesty. Liberty shall also be granted to bury the subjects or citizens of either of the two contracting parties, who may die in the dominions or territories of the other, in burial places of their own, which, in the same manner, they may freely establish and maintain; nor shall the funerals or sepulchres of the dead be disturbed in any way, or upon any account.

ARTICLES XIV., XV., XVI.—Same as in Mexican treaty.

Additional Articles.

ARTICLE I.—Whereas, in the present state of Peru-Bolivian shipping, it would not be possible for the said Confederation to receive the full advantage of the reciprocity established by the Articles V., VI., and VII., of the treaty signed this day, if that part of the VIIth Article which stipulates that, in order to be considered as a Peru-Bolivian ship, a ship shall actually have been built in the Peru-Bolivian Confederation, should be strictly and literally observed, and immediately brought into operation; it is agreed that, for the space of fifteen years, to be reckoned from the date of the exchange of the ratifications of this treaty, any ships, wheresoever built being *bonâ fide* the property of, and wholly owned by, one or more citizens of the Peru-Bolivian Confederation, and whereof the master and three-fourths of the mariners at least are also natural born citizens of the Peru-Bolivian Confederation, or persons domiciliated in the Peru-Bolivian Confederation by act of the government, as lawful subjects of the Peru-Bolivian Confederation, to be certified according to the laws of that country, shall be considered as Peru-Bolivian ships; his Majesty the King of the United Kingdom of Great Britain and Ireland reserving to himself the right, at the end of the said term of fifteen years, to claim the principle of reciprocal restriction stipulated for in the Article VII. above referred to, if the interests of British navigation shall be found to be prejudiced by the present exception to that reciprocity, in favour of Peru-Bolivian shipping.

ARTICLE II.—It is further agreed that, for the like term of fifteen years, the stipulations contained in the Articles V. and VI. of the present treaty shall be suspended; and, in lieu thereof, it is hereby agreed, that until the expiration of the said term of fifteen years, British ships entering into the ports of the Peru-Bolivian Confederation, from the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, and all articles the growth, produce, or manufacture of the United Kingdom, or of any of the said dominions, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable in the said ports by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and, reciprocally, it is agreed that Peru-Bolivian ships entering into the ports of the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, from any port of the Peru-Bolivian Confederation, and all articles, the growth, produce, or manufacture of the said Confederation, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable in the said ports, by the ships and the like goods, the growth, produce, or manufacture of the most favoured nation; and that no higher duties shall be paid, or bounties or drawbacks allowed, on the exportation of any article, the growth, produce, or manufacture of the dominions of either country, in the ships of the other, than upon the exportation of the like articles in the ships of any other foreign country.

It being understood that, at the end of the said term of fifteen years, the stipulations of the said Vth and VIth Articles shall, from thenceforward, be in full force between the two countries.

The present additional articles shall have the same force and validity as if they were inserted, word for word, in the Treaty signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

Treaty of Amity, Commerce, and Navigation, between his Majesty and the Republic of Bolivia. Signed at Sucre, September 29, 1840.

ARTICLES I., II., III., IV., V., VI., VII., VIII., IX., X.—Same as in Mexican and Peru-Bolivian Treaty.

ARTICLES XI. and XII.—Same as in Mexican Treaty.

ARTICLES XIII. and XIV.—Same as in Peru-Bolivian Treaty.

ARTICLES XV. and XVI.—Same as in Mexican Treaty.

Additional Articles.

ARTICLE I.—Whereas, in the present state of Bolivian shipping, it would not be possible for the said republic to receive the full advantage of the reciprocity established by the Articles V., VI., and VII. of the Treaty signed this day, if that part of the VIIth Article, which stipulates that, in order to be considered as a Bolivian ship, a ship shall actually have been built in the republic of Bolivia, should be strictly and literally observed, and immediately brought into operation; it is agreed that, for the space of fifteen years, to be reckoned from the date of the exchange of the ratifications of this Treaty, any ships, wheresoever built, being *bonâ fide* the property of, and wholly owned by, one or more citizens of the republic of Bolivia, and whereof the master and three-fourths of the mariners, at least, are also natural born citizens of the republic of Bolivia, or persons domiciliated in the republic of Bolivia by act of the government, as lawful subjects of the republic of Bolivia, to be certified according to the laws of that country, shall be considered as Bolivian ships; her Majesty the Queen of the United Kingdom of Great Britain and Ireland reserving to herself the right, at the end of the said term of fifteen years, to claim the principle of reciprocal restriction stipulated for in the Article VII. above referred to, if the interests of British navigation shall be found to be prejudiced by the present exception to that reciprocity, in favour of Bolivian shipping.

ARTICLE II.—It is further agreed that, for the like term of fifteen years, the stipulations contained in the Articles V. and VI. of the present Treaty shall be suspended; and, in lieu thereof, it is hereby agreed, that until the expiration of the said term of fifteen years, British ships entering into the ports of the republic of Bolivia from the United Kingdom of Great Britain and Ireland, or any other of her Britannic Majesty's dominions, and all articles, the growth, produce, or manufacture of the United Kingdom, or of any of the said dominions, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and, reciprocally, it is agreed that Bolivian ships entering into the ports of the United Kingdom of Great Britain and Ireland, or any other of her Britannic Majesty's dominions, from any port of the republic of Bolivia, and all articles the growth, produce, or manufacture of the said republic, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable in the said ports, by the ships and the like goods, the growth, produce, or manufacture of the most favoured nation; and that no higher duties shall be paid, or bounties and drawbacks allowed on the exportation of any article, the growth, produce, or manufacture of the dominions of either country, in the ships of the other, than upon the exportation of the like articles in the ships of any other foreign country.

It being understood that, at the end of the said term of fifteen years, the stipulations of the said Vth and VIth Articles shall, from thenceforward, be in full force between the two countries.

ARTICLE III.—If in the drawing up of this Treaty in the Spanish language, an involuntary error has been made in the translation, the English text is to be adhered to.

The present additional articles shall have the same force and validity as if they were inserted, word for word, in the Treaty signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

Treaty of Amity, Commerce, and Navigation between her Majesty and the Oriental Republic of the Uruguay. Signed at London, August 26, 1842.

ARTICLES I. and II.—Same as in Mexican Treaty.

ARTICLE III.—There shall be reciprocal liberty of commerce and navigation between and amongst the subjects and citizens of the two high contracting parties; and the subjects and citizens of the two countries, respectively, shall not pay in the ports, harbours, roads, cities, towns, or places whatsoever in either country, any other or higher duties, taxes, or imposts, under whatsoever names designated or included, than those which are there paid by the subjects or citizens of the most favoured nation; and the subjects and citizens of each of the high contracting parties shall enjoy the same rights, privileges, liberties, favours, immunities, and exemptions, in matters of commerce and navigation, that are granted, or may hereafter be granted, in either country, to the subjects or citizens of the most favoured nation.

No duty of customs or other impost shall be charged upon any goods the produce of one country, upon importation by sea or by land from such country into the other, higher than the duty or impost charged upon goods of the same kind, the produce of, or imported from, any other country. And her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and the Oriental Republic of the Uruguay, do hereby bind and engage themselves not to grant any favour, privilege, or immunity in matters of commerce and navigation, to the subjects or citizens of any other State, which shall not be also and at the same time extended to the subjects or citizens of the other high contracting party; gratuitously, if the concession in favour of that

other State shall have been gratuitous ; and on giving as nearly as possible the same compensation or equivalent, in case the concession shall have been conditional.

ARTICLES IV., V., VI.—Same as in Mexican Treaty.

ARTICLE VII.—The subjects of her Britannic Majesty shall have full liberty, in all the territories of the Oriental Republic of the Uruguay, to manage their own affairs themselves, or to commit them to the management of whomsoever they please, as broker, factor, agent, or interpreter ; and they shall not be obliged to employ any other persons in those capacities, than those employed by the citizens of the Oriental Republic of the Uruguay ; and they shall not be restrained in their choice of persons to act in such capacities, nor be obliged to pay them any other salary or remuneration than such as is paid in like cases by the citizens of the said republic ; and absolute freedom shall be allowed in all cases to the buyer and seller to bargain and fix the price of any goods, wares, or merchandise imported into and exported from the Oriental Republic of the Uruguay, as they shall see fit, provided they observe the laws and established customs of the country. The same privileges shall be enjoyed in the dominions of her Britannic Majesty by the citizens of the Oriental Republic of the Uruguay, under the same conditions.

The subjects and citizens of each of the contracting parties, respectively, shall, in the territories of the other, receive and enjoy full and perfect protection for their persons and property, and shall have free and open access to the courts of justice in the said countries, respectively, for the prosecution and defence of their just rights ; and they shall be at liberty to employ, in all causes, the advocates, attorneys, or agents of whatever description, whom they may think proper ; and they shall enjoy, in this respect, the same rights and privileges therein, as native citizens.

ARTICLE VIII.—In whatever relates to the police of ports, the lading and unlading of ships, the safety of merchandise, goods, and effects, the succession to personal estates by will or otherwise, and the disposal of personal property, of every sort and denomination, by sale, donation, exchange, or in any other manner whatsoever ; and to the administration of justice ; the subjects and citizens of each of the two contracting parties shall enjoy, in the dominions and territories of the other, the same privileges, liberties, and rights, as native subjects or citizens ; and they shall not be charged, in any of these respects, with any higher imposts or duties than those which are or may be paid by natives ; conforming of course to the local laws and regulations of such dominions or territories.

And it is further agreed, that the subjects and citizens of the two contracting parties shall have and enjoy, in all the dominions or territories of each other, the most full and perfect liberty to devise or dispose of their property and effects of every kind and denomination, and wheresoever situate, by will or testament, to such person or persons, and in such proportions as their own free will may dictate.

If any subject or citizen of either of the two contracting parties should die without will or testament in the dominions or territories of the other, the consul-general or consul, or, in his absence, the representative of such consul-general or consul, shall have the right to nominate curators to take charge of the property of the deceased, so far as the laws of the country will permit, for the benefit of the lawful heirs and creditors of the deceased, without being interfered with by the authorities of the country, but giving to those authorities due and proper notice.

ARTICLE IX.—The subjects of her Britannic Majesty residing in the territories of the Oriental Republic of the Uruguay, and the citizens of the said Republic residing in the dominions of her Britannic Majesty, shall be exempted from all compulsory military service whatsoever, either by sea or land, and from all forced loans or military exactions or requisitions.

Neither shall they be compelled, under any pretext whatsoever, to pay any charges, requisitions, or taxes, greater than those which are or may be paid by native subjects or citizens of the territories in which they reside.

ARTICLE X.—It shall be free for each of the two contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party ; but no consul shall act as such, until he shall, in the usual form, be approved and admitted by the government to which he is sent ; and either of the contracting parties may except from the residence of consuls such particular places as they may judge fit to be excepted. The diplomatic agents and consuls of the Oriental Republic of the Uruguay, in the dominions of her Britannic Majesty, shall enjoy whatever privileges, exemptions, and immunities, are or may there be granted to agents of the same rank belonging to the most favoured nation ; and in like manner, the diplomatic agents and consuls of her Britannic Majesty in the territories of the Oriental Republic of the Uruguay, shall enjoy, according to the strictest reciprocity, whatever privileges, exemptions, and immunities, are or may there be granted to the diplomatic agents and consuls of the most favoured nation.

ARTICLE XI.—Same as Article XII. in Mexican Treaty.

ARTICLE XII.—Same as Article XIII. in Peru-Bolivian Treaty.

ARTICLE XIII.—The present Treaty shall be in force for the term of ten years from the date thereof ; and further, until the end of twelve months after either of the high contracting parties

shall have given notice to the other of its intention to terminate the same: each of the high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of ten years, or at any subsequent time.

And it is hereby agreed between them, that at the expiration of twelve months after such notice shall have been received by either party from the other, this Treaty, and all the provisions thereof, shall altogether cease and determine.

ADDITIONAL ARTICLE.—Whereas by Article IX. of the Treaty of Amity, Commerce, and Navigation, concluded and signed this day between her Britannic Majesty and the Oriental Republic of the Uruguay, it is stipulated that the subjects of her Britannic Majesty, residing in the said Republic, shall not be compelled, under any pretext whatsoever, to pay any charges, requisitions, or taxes, greater than those which are or may be paid by native citizens; and whereas, by a law of the Oriental Republic of the Uruguay, a foreigner pays for the licence to open a shop, or other establishment included in the provisions of the said law, a sum greater than that which is paid by a native citizen; her Britannic Majesty engages, notwithstanding the provisions of the above-mentioned Article, not to insist upon the abolition of this distinction, so long as it exists impartially with regard to the subjects or citizens of every other foreign nation.

And his Excellency the President of the Oriental Republic of the Uruguay engages, on his part, that if at any future time, the amount payable by British subjects for such licence should be increased, a corresponding increase shall at the same time be made in the sum payable by native citizens of the Republic; so that the proportion between the sum payable by British subjects and the sum payable by citizens of the Oriental Republic of the Uruguay, respectively, shall never be altered to the prejudice of British subjects.

The present additional article shall have the same force and validity as if it were inserted, word for word, in the Treaty signed this day. It shall be ratified, and the ratifications shall be exchanged at the same time.

SECOND ADDITIONAL ARTICLE.—Whereas a strict and immediate execution of that part of Article VI. of the Treaty of Amity, Commerce, and Navigation, signed at London on the 26th of August, 1842, between her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and the Oriental Republic of the Uruguay, which stipulates that a ship must have been actually built within the territory of the Oriental Republic of the Uruguay, to be considered a ship of that Republic, would, in the present state of Uruguay shipping, deprive the Republic of the full advantage of the reciprocity intended to be established by the Treaty; it is agreed that, for the space of seven years from the date of the exchange of the ratifications of the said Treaty, any ships, wheresoever built, being owned, navigated, and registered in conformity with the provisions of Article VI. of the Treaty, shall be considered as ships of the Oriental Republic of the Uruguay: her Majesty the Queen of the United Kingdom of Great Britain and Ireland reserving to herself the right to claim, at the end of the said term of seven years, the strict enforcement of all the stipulations contained in the said article of the Treaty, relative to the conditions which are to determine the national character of vessels of the Oriental Republic of the Uruguay.

The present additional article shall have the same force and validity as if it had been inserted, word for word, in the aforesaid Treaty of the 26th of August, 1842. It shall be ratified, and the ratifications shall be exchanged at the same time and place as those of the Treaty.

BRAZIL.

The *Commercial Treaty* with Brazil has expired in accordance with a notice given two years previously to that effect. No new Treaty has as yet been negotiated in consequence of excluding, by a prohibitory duty, sugar, the produce of Brazil by the British sugar duties acts of 1842, 1843, 1844, 1845.

CHAPTER XIII.

CUSTOMS' TARIFF OF THE SPANISH AMERICAN REPUBLICS.

THE commercial regulations and custom-house prohibitions and duties of the Spanish American Republics have been characterised by barbarous restrictions and by ignorance of all sound principles of commerce and finance. The most absurd restrictions even upon internal traffic, and the most preposterous attempts to protect national industry, have been adopted since the independence of those states, and as suddenly and capriciously altered in form. These regulations, and prohibitions, and duties have, like the revolutions of those unfortunate countries, been suddenly and capriciously changed by every new ruler, but always to the great injury of trade and commerce.

Though the latest tables of duties which we have obtained may, in a very short period, be altered, we believe the changes will not, for some time, materially alter the amount of duty, nor the restrictions on trade.

MEXICO.

General Commercial Regulations for the Maritime and Frontier Custom-houses, according to the Laws of the 27th of August, 1845.

ARTICLE I.—Every vessel of whatever nation, not at war with Mexico, shall be admitted into such ports of the latter as are open to foreign commerce; and in the act of arriving, the captain, or supercargo, and the crew, as well as the vessel and the cargo, shall be subjected to the regulations prescribed in this decree; to the payment of duties, and to the penalties established by it, or to the measures in force at the time of arriving. Vessels shall therefore be considered as arrived for all the uses of this tariff immediately on casting anchor in the waters of the port.

ARTICLE II.—Vessels proceeding from a foreign port, not excepting national vessels, shall bring no more merchandise than is destined for the Mexican port to which they are bound. The breach of this article shall be punished by confiscating the vessel and the merchandise not destined to the same port.

ARTICLE III.—The following ports are open to foreign commerce :

	Sisal.
	Campeachy.
	Santa Juan Bautista de Tabasco.
	Vera Cruz.
In the Mexican Gulf	Santa Anna de Taumalipas.
	Matamoros.
	Matagorda.
	Velasco
	Galveston
In the Pacific	Acapulco.
	San Blas.
	Mazatlan.
In the Gulf of California	Guaimas.
In the Sea of Upper California	Monterey.

Section I.

ARTICLE IV.—National vessels, conveying foreign or native goods, produce, or other effects from one port to another, or others in the republic, shall be free from tonnage duties.

ARTICLE V.—The following effects shall be free of all duties in whatever vessel they may be imported, viz. :

1. Card-wire.
2. Exotic or dissected animals.
3. Quicksilver.
4. Mineral coal, until the mines of the republic supply it.

5. Mineralogical and geological collections.
6. Objects of natural history.
7. Designs and models of machines, edifices, monuments, and shipping.
8. Bricks and earth for foundry furnaces.
9. Printing types.
10. Printed books, stitched and manuscript, or printed music, not including in this exemption books and other prints used for infant schools, or for devotion, and bound or half-bound books.
11. Topographical and geographical maps and charts.
12. Machines, apparatus, and instruments for scientific purposes.
13. Machines and apparatus for agriculture, mining, and the arts, except *stills* that are not of new invention. (In this and the preceding classification *machines* are understood to be such works as are composed of various pieces, with the object of putting into play mechanical power; and *apparatus* such works as are composed of various pieces adapted for experiments in physics, and the chemical affinities of bodies, solid, liquid, gaseous, or imponderable; things that can be sold separately, such as pig iron, oil, broad cloth, plush, skins, &c., though coming as connected with machinery, shall be subject to the payment of duties.)
14. Ancient and modern coins of all metals, and facsimiles of them in compositions or pasteboard.
15. Ship masts.
16. Exotic plants and their seeds.
17. New vessels of all kinds, destined to become naturalised.
18. Linen rags.
19. Printing ink.

ARTICLE VII. Such articles as are declared free of importation duties, shall also be free of all other duties in their transit through the country.

ARTICLE VIII. Although the effects enumerated in the 5th article shall be free of all duties, they must be entered in the general manifest of the vessel, and bring particular invoices with them made in conformity with what is prescribed in Article XXVIII. Goods arriving in the republic without said documents, and having a consignee, he shall pay only a fine of fifty dollars, but should there be no consignee to take charge of them immediately, the fine shall be levied on said effects, which in this case shall be 100 dollars, and the surplus effects shall be delivered to the respective consuls, that they may hold them at the disposal of whoever may have a right to them.

Section II.—Prohibitions.

ARTICLE IX.—The importation of the following effects is prohibited under the penalty of confiscation, and other penalties imposed by this tariff:

1. Brandy distilled from sugar-cane, and any other not from the grape, except gin and rum imported in bottles and jars.
2. Starch.
3. Aniseed, cummin, and caraway-seed.
4. Capers.
5. Sugar of all kinds.
6. Rice.
7. Raw Cotton.
8. Indigo.
9. Brass and copper wire of all kinds.
10. Fire-arms, and other arms of all kind.
11. Sulphur.
12. Boots and half-boots of leather or cloth, with soles for men, women, and children.
13. Buttons of every metal, which are engraved or stamped on the obverse or reverse with the national or Spanish arms.
14. Coffee.
15. Manufactured wax.
16. Cast nails of all sizes.
17. Copper in pigs, and manufactured into utensils for domestic use.

18. Cumin.
19. Tortoiseshell and horn, manufactured into articles of the latter material only.
20. Epaulettes of all kinds and metals for military insignia.
21. Cordovan leather of all kinds and qualities.
22. Tin in blocks.
23. All kinds of prints, miniatures, pictures, and figures that are obscene, and in general every article of workmanship that is obscene, and contrary to religion and good morals.
24. Artificial flowers.
25. All kinds of galloons made of metals or other materials.
26. Chamois leather of all kinds.
27. Woollen cloths of the poorest and coarsest kinds, called "gerga" and "gerguetilla."
28. Wheat flour, except for Yucatan.
29. Every kind, number, and colour of cotton yarn.
30. Every kind, number, and colour of cotton thread.
31. Thread of cotton and linen mixed.
32. Soap of all kinds.
33. Children's toys.
34. Common earthenware, glazed or not glazed, printed or plain.
35. Books, pamphlets, and manuscripts prohibited by competent authority.
36. Blank books, ruled or not ruled, and invoices, bills of exchange, bills of lading, and forms of custom-house documents, whether printed, engraved or lithographed.
37. Hog's lard.
38. Molasses.
39. Timber of all kinds, excepting for ship masts, fine wood for veneers, and that permitted in Tampico and Matamoros by the decree of the 3rd of June, 1840, subject to the duties assigned to it.
40. Munitions of war, whether of lead, or any other metal.
41. Playing cards of all kinds.
42. Gold leaf or tinsel.
43. Broad cloth, not of the first quality.
44. Parchments, except for drawing.
45. Lead in the rough or refined.
46. Gunpowder, except for sporting.
47. Ploughshares of the same form as that used in the country.
48. "Rebosos" (cotton scarfs of the country) of all kinds, and all printed or clouded cloths, imitating them.
49. All kinds of ready-made clothing, including vestments and clerical ornaments.
(The following articles excepted :
Bands and sashes, with or without fringe.
Covered buttons of all kinds. Leather shirts.
Stocking web, shirts and drawers, whether of silk, cotton, or wool.
Silk scarfs.
Netted, or elastic caps, whether of silk, cotton, or wool.
Gloves.
Stockings, hats, and suspenders.
Handkerchiefs.
Shawls, with and without linings.)
50. Common salt.
51. Saltpetre.
52. Blankets and coverlets of cotton or woollen, or of a mixture of both.
53. "Saya" (a fabric made of wool and hair) and sayaleta (a coarse woollen stuff called in some places taminy).
54. Tallow in the rough and refined.
55. Tobacco of all kinds and in every form. It can only be imported by the director of the tobacco monopoly, but private licences for cigars and rappee will be granted

by the government, in which case the duties will be paid at three dollars per pound.

56. Plain and ribbed cloths, bleached, and unbleached, made of cotton alone or mixed, that do not exceed thirty threads weft and warp on a quarter inch.
57. Unbleached, twilled, and satin-faced cloths, made of cotton only or mixed, which do not exceed thirty threads weft and warp on a quarter inch.
58. Plain coloured cloths of fast colours made of cotton only, or mixed, which do not exceed twenty-five threads weft and warp on a quarter inch.

(When in this and other parts of the tariff colours are alluded to, it must be understood that the definition includes not only the colours which resist the action of water, soap, and light, but also those which do not resist them, but always retain enough colour to prevent them being used to the prejudice of the bleached and unbleached cottons manufactured in the country.)

59. Plain coloured cloths of fugitive colours, made of cotton only, or mixed, which do not exceed thirty threads under the quarter inch of weft and warp.

60. Salt pork cured or pressed and the offal of pigs.

(In this prohibition are not included *sausages* and *smoked hams*.)

61. Wheat and all other grain.

62. Shoes and slippers.

With respect to manufactured articles of iron and steel, the following are exempted from the said prohibition, and they shall pay the corresponding duties:—

Awl blades.

Fish hooks.

Barrel hoop and hoop iron.

Gimlets.

Braces and bracebits.

Gravers.

Knives proper to the arts.

Strings for musical instruments.

Hand vices.

Hoks for dentists.

Files.

Saws.

Screws.

ARTICLE X. The law of the 29th of March, 1827, remains in force, inasmuch as the powers given by it to the states' legislatures for fixing the periods for allowing the importation, are exercised by the "juntas" of the departments.

ARTICLE XI. The importation of wheat into the state of Chiapas is permitted in such cases as the "junta" of the department shall determine.

Section III.—Of Duties on a Valuation to be fixed according to the prices of the Articles within the Republic.

ARTICLE XII. All goods, produce, and effects included in this tariff shall pay the rates designated in it.

The goods which exceed a vara in width shall be reduced to square measure, and the rate shall be collected on each square vara; but cloths under a vara wide, which are joined together by a seam or list, are not to be passed as a single piece, otherwise it will be held as a fraud. Those which are not specified in this tariff, shall pay an *ad valorem* duty of thirty per cent.

ARTICLE XIII.—The vessels, barrels, or bottles, which contain liquids, and the common wrappers of piece goods, including up to ten varas of inside wrapper, whether of linen, woollen, or cotton stuff not prohibited, will be exempt from duties, but if they exceed this length the whole shall pay duty according to this tariff, and should they be of a prohibited kind, they shall be confiscated.

SECTION IV.—Specific duties imposed according to fixed valuations on the basis of thirty per cent. These valuations are those which the goods are worth in Mexico, without any reference to the invoice prices. The following

Thread, cotton, or of cotton and wool, including the paper-packages.....	lb.	0 50	0 2 1				

Note 1.—All handkerchiefs which exceeds a square vara, shall be subject to pay duties, according to their kind, for the number of square varas they contain.

Note 2.—All the cloths included in this classification, although they may have a mixture of flax, hemp, grass, or tow, or any of them, shall pay the rate and duty as pure cotton, according to the description of cloth they are.

ARTICLE XVIII.—The weights and measures referred to in this tariff, and which shall regulate the collection of duties, are those of established usage in this Republic. The measures, therefore, are:—

The *vara*, of three feet long.

The *foot*, of twelve inches.

The *inch*, of twelve lines.

The weights are,—

The *quintal*, of four arrobas, is equal to 101 lbs. 7 ounces, averdupois.

The *arroba*, of twenty-five pounds.

The *pound*, of sixteen ounces, is equal to 1 lb. 4 drams nearly, averdupois.

The *ounce*, of sixteen drachms.

The *drachm*, of thirty-six grains.

The moneys named for the payment of duties are,—

The *dollar*, of eight silver rials, in value equal to about 4s. 2d. sterling.

The *cents*, one hundred to each dollar.

Dry Measure.—The cahiz contains 12 fanegas; and the fanega, 12 celemines. The latter has many sub-divisions. The fanega is of the capacity of 3439 cubic inches, English, and is equal to 1.599 bushel.

Liquid Measure.—The mozo of wine contains 16 arrobas, or cantaros; an arroba, 8 azumbras, or 32 quartillos. A botta contains 30 arrobas. The arroba measures 981 cubic inches, English, and is equal to 4.245 gallons. The arroba of oil is equal to 3.33 gallons.

Long Measure.—The foot is divided into 12 pulgadas, and is equal to 11.128 inches, English. The palmo measures 9 pulgadas, or 8 $\frac{1}{4}$ inches; the vara, 4 palmos, or 33.384 inches.

Section V.—Of the Formalities required to be observed previous to the departure of the Vessel from the Port of Shipment.

ARTICLE XXVII.—These formalities shall be observed :—

- 1st. By the shippers of goods to the Republic.
- 2nd. By the captains and supercargoes of the vessels which bring the said goods.
- 3rd. By the consuls, vice-consuls, or merchants, who certify the invoices of the shippers and the vessels' manifests in the mode expressed in the proper place.

Of the Shippers and Consignees of Goods.

ARTICLE XXVIII.—Any individual sending from a foreign country merchandise to the Mexican Republic, shall make one or more invoices (according as it suits him) of all the merchandise which he ships to each consignee. This invoice must contain the following particulars:—

- 1st. The name of the vessel and captain, and the port of Mexico to which the vessel is bound, together with the name of the party to whom the articles contained in said invoice are consigned.
- 2nd. The particulars in writing and cypher of the contents of all bales, cases, barrels, packs, or bundles in which each kind of merchandise comes.
- 3rd. The marks and numbers of each package.
- 4th. The name of the merchandise, and the particulars, in writing and cypher, of the quantity, weight, length, and breadth appertaining to the said merchandise, agreeably to what this tariff requires for the regulation of the payment of duties, it being understood that the width shall be expressed in the same kind of measure as the length.

The liquids and commodities, whose duties are regulated according to this tariff by weight, the invoices must specify in the kind of weight that is in use at the port from whence the vessel comes, and must give all particulars as to what it is.

5th. The signature of the owner or shipper.

6th. The shipper shall present to the Mexican consul, or vice-consul, residing at his port, three copies of the invoice, and this officer shall certify each one in the manner required in the thirty-fifth article, and then deliver to the said shipper one of the copies to be sent to his consignee by said vessel. Should there be no Mexican consul or vice-consul in the port, these invoices shall be presented to the consul or vice-consul of any other nation at peace with Mexico; but should there be no such consul or vice-consul there, then said invoices may be certified by two merchants of known reputation resident in the port. The form of the certificate will be, in all cases, that prescribed by the thirty-fifth article.

ARTICLE XXIX.—For the neglect of any one of these six requisites the collector shall impose the penalties hereinafter expressed, and exact them from the consignee.

1st. For the omission of each one of the requisites, 1, 2, and 3, a fine not under five, and not above twenty-five dollars.

2nd. Omitting to explain in writing and cypher what is required in 4, will incur a penalty similar to the one stated in the preceding paragraph; but if the invoice do not specify the quantity, weight, or measure of the goods, the whole of that part of the cargo not so specified shall be examined, and the duties on this part shall be charged twenty-five-per cent more than that fixed in this tariff.

3rd. When the signature of the shipper is wanting in the invoices, the omission shall be punished by a fine of from five to twenty-five dollars; but should the signature be wanting in one or two copies, which in all other respects agree with the one signed, no penalty shall be incurred; and if they should not agree the aforesaid fine will be levied, and the duties shall be rated according to the invoice which will yield the greatest amount of them.

4th. In case the consular certificate, or that of two merchants where there are no

consuls, be wanting, the goods thus uncertified shall be placed in deposit for one month; during this time, should the consignee present certified invoices, the goods shall be despatched, without exacting any fine, but being longer in deposit without the required certificate being presented, they shall be confiscated. Where the certificate has been granted in any consulate, and the seal omitted, a fine shall be imposed of from ten to fifty dollars; but should this happen with respect to one or two of the copies, or that they be not certified at all, the penalty will be the same as that expressed in the preceding paragraph.

Great care is required in packing separately all articles liable to quick ignition by friction.

ARTICLE XXX.—All interpolations, corrections, scratchings, and erasures in the body of invoices are prohibited under a penalty of from fifty to two hundred dollars. Should any alteration be necessary, it shall be placed at the foot, and before the consular certificate, specifying clearly what is the alteration in the part or parts of said invoice, but without touching in any way the original writing, only in this way or in that expressed in Article XLI., can be admitted any alteration, otherwise the penalty imposed by this article shall be incurred.

ARTICLE XXXI.—Should the vessel have proceeded from two or more foreign ports, and have brought cargoes from each, she must bring invoices from each one of the goods taken on board at each place with the same number of copies and other requisites indicated in the preceding articles, and similar to those she brings from the first port of her sailing.

Of Captains of Vessels.

ARTICLE XXXII.—The duties of captains of vessels, spoken of in this tariff belong equally to supercargoes, when there are any.

ARTICLE XXXIII.—The captain of every vessel laden with any kind whatever of merchandise from a foreign port, must make a general manifest of them in triplicate, at the port of shipment, and this document shall specify:—

- 1st. The vessel's name and nation, the measurement of her tonnage in writing and cypher, the captain's name, the port of her departure, and the Mexican port to which she is bound.
- 2nd. The shippers' names and those of the consignees to whom the cargo is to be delivered.
- 3rd. The bales, cases, barrels, packs or packages of every kind, with their corresponding marks and numbers, the number of which shall be written in letters and cyphers, and each kind specified, whether they be bales or cases, &c.
- 4th. The general denomination of the merchandise shall be stated as it appears in the bills of lading.
- 5th. The date and signature of the captain.
- 6th. The captain shall present to the Mexican consul or vice-consul residing in the port from whence he sails, three copies of the manifest, in order that in each one may be written the certificate expressed in the thirty-fourth Article. Should there be no consuls or vice-consuls there, the provision stated in the sixth paragraph of the twentieth Article shall be observed.

ARTICLE XXXIV. For the omission of any of the first five conditions aforesaid, the captain shall be fined from five to twenty-five dollars, to be regulated by the collector.

ARTICLE XXXV.—In case the certificate alluded to in the sixth condition be omitted in the three copies of the manifest, the vessel, and all that belongs to it will be confiscated but the cargo will not be subject to this penalty provided its respective invoices and certificates are in order.

ARTICLE XXXVI.—The omission of the certificate, seal, or captain's signature, and any one of the three copies of the manifest shall be liable to similar fines as the omissions of a similar nature in the shipper's invoices.

ARTICLE XXXVII.—It will be the captain's duty to avoid the defects in his manifest spoken of in Article XXX., and in case there be any, to have them rectified in the same manner as is stated in the said article, under the penalty of 200 dollars for each infraction.

ARTICLE XXXVIII.—The captain is equally obliged to present certified manifests of any cargo he may receive at ports where he may stop at, after his first sailing, as well as to have invoices made out agreeably to Article XXX., under the penalty of losing his vessel, and all that belongs to her, for such omission.

Of Consuls and Consular Certificates.

ARTICLE XXXIX.—The consuls and vice-consuls of the republic resident in foreign countries, are required under the strictest penalty of the law punctually to observe all the provisions of this tariff that relate to themselves. At the same time, the republic expects all consuls, vice-consuls, and merchants of friendly nations, to proceed agreeably to these instructions, in the exercise of that protection which in their official capacity it is their duty to extend to the fair trader, and thus protect the captains of vessels and shippers of goods from the injuries to which they would be exposed by any deviation from the forms prescribed in this tariff for their guidance.

ARTICLE XL.—As soon as any captain or super-cargo of a vessel presents the consul with the manifest in triplicate, of the cargo destined to any Mexican port, or when any merchant delivers him his invoices in triplicate, he shall intimate to them that if any alteration is necessary, it must be done immediately without losing sight of the provision relative to alterations contained in Articles XXX. and XXXVII.; for when once the certificate is added, no alteration whatever shall be admitted.

ARTICLE XLI.—By virtue of what is provided in Article XXX., no consul, vice-consul, or merchant, shall certify any manifest or invoice brought to them with interpolations, corrections, scratchings, or erasures; in such case they shall be returned to the owner to be written out afresh; but if it should happen that the sailing of the vessel does not allow time for this, the consular certificate may be added, provided said defects are described in it, whether they occur in manifests or invoices; such defects being interpolations, corrections, scratchings, or erasures. The fees of office in such case, will be double what is commonly paid for a certificate. When any manifest or invoice has not passed these forms, the fine imposed by the Articles XXX. and XXXVII. will be incurred by the captain or consignee.

ARTICLE XLVIII.—Before certifying the manifests of the captains and the invoices of shippers, the consul or vice-consul shall ask if they are aware of the kind of goods, produce, and other merchandise prohibited from entering the republic, and of the penalties imposed by this tariff on those who trade in such merchandise. If they reply in the affirmative, their documents shall be certified; if the contrary, they shall be made aware of them before the certificates are granted.

Section VI.—Of the Arrival of Vessels at the Ports of the Republic.

ARTICLE XLIX.—All foreign vessels arriving at the ports of the republic, shall pay a tonnage duty of twelve rials per ton, and national vessels arriving direct from foreign ports shall be subject also to the same.

The anchorage dues in respect to both are abolished.

ARTICLE L.—When a vessel, after her total discharge, is permitted, agreeably to Article CV., to go from one port to another in the republic, in order to ship merchandise of the country, tonnage duties shall not again be exacted, but in order to enjoy this privilege, it must be understood that she comes direct from a national port, otherwise she shall pay the usual dues.

ARTICLE LI.—The captains or supercargoes of vessels proceeding from a foreign port, on arrival in the waters of a Mexican port, shall not allow any person whatever to come on board until they have been visited by the quarantine officers, and those of the custom-house, whose boats shall carry the national flag. The violation of these provisions shall subject the captain or supercargo to a fine of fifty dollars. An equal fine shall be exacted from any person not belonging to the vessel, who shall either speak or board her before the visit of the aforesaid officers.

The non-payment of the fine shall be remedied by confining the defaulters, who shall also suffer for breaking the quarantine regulations.

ARTICLE LII.—Whether the vessel be in the act of sailing or anchored, as soon

as a revenue officer, or some one authorised by the collector of the customs, should he think proper to appoint such, shall go on board; the captain or supercargo shall deliver in the same moment to either one or other of the aforesaid officers the packet or packets addressed to the collector agreeably to Article XXXVIII.; should he fail to do so without being able to produce justifiable proof of some extraordinary accident having occurred during the voyage, he shall be subjected to a fine of 200 dollars, besides the expenses of making new copies of the manifest taken from the third copy which he brings with him as required by the same Article XXXVIII., and from the invoices presented by the consignees, which copies shall be authorised by the collector and comptroller of the custom-house.

If the lost manifest be that which the captain should bring with him, and its absence be not accounted for from a similar cause, he shall be fined fifty dollars; but should the sealed packet inclosing the two copies of manifest of invoices, together with his own manifest be wanting, and their absence not be honestly accounted for, the vessel and all that belongs to her shall be confiscated, but not the cargo; if, however, the consignee of any part of it do not present his invoices as required by Article XXXVIII., then this part also shall be confiscated. As a general rule, the non-delivery of the three copies of the ship's manifest, or that of the invoices without a sufficient cause being shown before a revenue law-court, shall be punished with the confiscation of the vessel and that part of the cargo involved in it. Of all which, advice shall be given by the first post to the principal office of customs and direct taxes.

ARTICLE LIII.—At the same time that the captain or supercargo delivers the packet treated of in the foregoing article, to the revenue officer or the agent from the custom-house, he shall also deliver to them a note signed by him, stating the trunks, valises, and any other baggage belonging to his passengers, expressing the names of those to whom they belong. Said note shall also contain the stock on hand of provisions belonging to the vessel. The non-delivery of this note shall subject the captain to a fine of fifty dollars.

ARTICLE LIV.—Should the stock of provisions appear to the collector of the custom-house excessive in the extreme, he shall have power to order it to be deposited in the custom-house stores, directing the vessel to be supplied with what may be necessary for its consumption, and allowing the remainder to be embarked only when there be no risk of fraud.

ARTICLE LV.—The captain or supercargo having omitted to deliver a note stating the baggage and the surplus stock of provisions, it shall be supplied by the revenue or custom-house agents, forming one by taking the particulars as given by the passengers in respect to their luggage; and by taking an inventory of the stock of provisions at the same time if possible, either before or after the vessel has finished her discharge. The officer who does this, shall add his signature, and it shall be at the option of the collector to fix the time for doing it.

ARTICLE LVI.—Should the vessel have suffered stress of weather during her voyage, causing part of the cargo to be thrown overboard, or having been forced to put into port, and obliged to sell some part of the cargo to meet expenses, then the captain or supercargo shall present a declaration in writing of the circumstances, and deliver the same to the revenue officer, or to the agent of the custom-house, with the sealed packet containing the manifest and invoices.

ARTICLE LVII.—As soon as the collector receives this declaration, he shall communicate it to the mercantile tribunal, which shall immediately proceed to obtain proofs of the alleged facts. If the case be of goods thrown overboard, it will be necessary to prove it, not only by the affirmation of the passengers and crew, but also by the entry of it in the log-book. Similar evidence will be required of the sales made at the port which the vessel may have been forced to put into, and besides a certificate of the fact shall be legalised by a public authority at said port.

ARTICLE LVIII.—On the facts as stated having been proved, no duties shall be exacted on the merchandise thrown overboard or sold.

ARTICLE LIX.—The principal revenue officer or the custom-house officer having received the sealed packet, and the statement as required by Articles XLIV. and XLV., which

the captain or supercargo ought to deliver to one of the two, said officer shall give the captain or supercargo the proper receipt, which shall in every case be a printed form, bearing the custom-house seal. This being done, he shall immediately proceed to seal the hatches and other parts of the hold of the vessel. No guard shall remain on board, excepting when the collector so orders it, which order must be in writing.

ARTICLE LX.—Due vigilance shall be used by the revenue officers both by land and water, in order to prevent communication with the vessel, or fraudulent extraction of the cargo.

ARTICLE LXI.—The principal revenue officer, or the custom-house agent, on landing shall immediately deliver into the hands of the collector the sealed packet containing the manifest and invoices, as well as the list of luggage and stock of provisions, and without any delay the collector shall put into the post-office the packet for the Minister of Finance, in order that it may be forwarded by the first mail, or by an express, should there be one. After this the collector shall compare the documents, and finding them in order, shall sign them.

ARTICLE LXII.—Within twelve business hours from casting anchor, the captain or supercargo shall deliver to the collector and comptroller, or to the person who acts for them, the third copy of his general manifest, as required by Article XXXVIII. He shall make oath in the manner he holds most solemn and in due form before said officers, that all the merchandise on freight and for sale, forming the vessel's cargo, is contained in the manifest, and in the list of luggage and stock of provisions presented by him. Should he refuse to make oath, the collector shall direct the captain of the port to detain the vessel until the custom-house be satisfied that there is no fraud.

ARTICLE LXIII.—Within twelve business hours after the delivery of the correspondence, the consignees shall present their copies of invoices belonging to the cargo, making oath to each with their signatures affixed, that they are correct and in order according to the best of their knowledge and belief, taking into account the corrections which may have been made. Should the consignee refuse to make oath in the manner aforesaid, the merchandise contained in his invoices shall be examined piece by piece, and with the greatest scrutiny.

ARTICLE LXIV. The consignee named in the invoice of the shipper of the goods may refuse to receive them, provided he renounce his right during the twelve business hours granted for presenting the invoices, and provided also he present them at the time of formally refusing the consignment.

ARTICLE LXV.—The time fixed in the preceding article having elapsed without either refusing to receive the goods or presenting the corresponding invoices, it shall be understood that the consignment is accepted.

ARTICLE LXVI.—Should there be several consignees in common, the refusal must be signed by all. But if they are named in order, 1, 2, 3, &c., the refusal of the last in order is equivalent to that of all those who precede.

ARTICLE LXVII.—If the shipper of the goods, whose consignment is refused, be a citizen of the republic, the collector shall inform the mercantile tribunal of it, and it shall name two respectable merchants as consignees.

ARTICLE LXVIII.—If one of these refuse, and the other consent, this one alone shall be the consignee. The refusal of these consignees officially named must be made within two business days after the date of their nomination, otherwise it shall be understood that they have accepted the consignment.

ARTICLE LXIX.—Should both the persons thus appointed refuse, the tribunal shall inform the collector, who shall order the goods to be sold at public auction to the best bidder. From the produce of the sale, the duties shall be deducted, and the balance placed in deposit with the mercantile tribunal on account of the owner.

ARTICLE LXX.—Should the shipper of the goods whose consignment has been refused be a foreigner, the collector shall make an official communication to the consul or vice-consul belonging to the same nation, advising him of it, in order that within the time limited by Article LX., he may state whether or not he will take charge of the goods; after this limited time expires, he shall be considered the consignee.

ARTICLE LXXI.—The consul or vice-consul having declined the charge, the goods shall be disposed of as directed in Articles LXVII., LXVIII., and LXIX.

ARTICLE LXXII.—Any vessel anchoring in a Mexican port, whose object is neither to receive or discharge cargo, but merely to repair damages, or take in provisions for the crew, shall be permitted to remain during the time necessary for this object, but on condition that all the papers belonging to the cargo be exhibited, and that she be subject to all the regulations and precautions established for all other vessels arriving at and destined for these ports. If any transshipment of goods take place without the permission given by the collector to store them during the time of careening, and it be discovered, the vessel shall be dealt with in the manner prescribed in Articles CXX., CXXI., and CXXII., according to the kind of the goods. When the damage is of such a kind as to prevent the vessel continuing her voyage, the collector shall inform the government, in order that it may determine what ought to be done.

ARTICLE LXXIII.—The captain or supercargo, during the twelve business hours allowed him for presenting his manifest, and the consignees, during the twelve hours allowed them for their invoices, may correct at the foot of them any of the defects fineable by Articles XXVIII., XXXIV., and XXXVI., of this tariff, but no defects can be reformed which incur the penalty of confiscation, nor that of 25 per cent augmentation in the duties, as spoken of in the 2nd part of Article XXVIII., nor in respect to the omissions treated of in Article LXXXIV., because these penalties falling on breaches of the law which cannot be attributed to forgetfulness, or involuntary negligence, do not merit indulgence; the aforesaid reforms shall free those who were liable to the corresponding fines.

Section IX.—Of Exportation.

ARTICLE CX.—Foreign vessels shall not be allowed to carry on the coasting-trade, or of "Echelle," in the ports of the republic, but after concluding their discharge in any of them, and having cleared, they may go directly to those open to the coasting or other trade, in order to load dyewood, or any other national produce that is exempted by law from duties of exportation, provided always that they have a certificate in due form from the respective custom-houses of having there paid the tonnage duties.

ARTICLE CXI.—In order to enjoy the privilege granted in the preceding article, all foreign vessels must submit to the visit of the officers of health and search belonging to the port at which they arrive; and should they carry money to make purchases, they must have also a certificate in due form from the respective custom-houses, expressing in figures and writing the amount embarked, and that the export duties appointed by this tariff have been paid.

ARTICLE CXII.—All goods, produce, and national commodities shall be free of all duties on exportation, neither shall they be liable to duties of any kind whatever in their transit through the interior of the country or coastwise, excepting the following, which they shall pay to the national revenue:—

Gold in coin	3 per cent.
Gold bullion (quintado)	6 "
Silver in coin	6 "
Wrought silver (quintado)	7 "
Virgin silver, accompanied with certificate of having paid "quinto" duty	7 "

ARTICLE CXIII.—The exportation of gold and silver in bars or ingots, in ore, and dust, Mexican monuments and antiquities, and the seed of the cochineal is prohibited under penalty of confiscation; but this prohibition shall not extend to small quantities of the mineral ores and dust intended for specimens as curiosities; but a permit from the government for their exportation will always be required.

ARTICLE CXIV.—The permission to export gold and silver bullion at the ports of Guainas and Mazatlan shall be continued, under the conditions and formalities prescribed in the decrees of the 10th November, 1841, and 16th February, 1842, gold when exported paying 11 per cent and silver 9½ per cent on the value, besides 1 per cent more for each of duty imposed by the 2nd article of the decree of the 10th March of

this year, when not sent to the mint to be coined. The collection of these duties hereby authorised is exempt from the term of credit allowed by the 101st article.

ARTICLE CXV.—Articles subject to export duty, shipped clandestinely to evade the payment of duty shall be confiscated, if so discovered: should the goods be beyond seizure, a fine equal to the amount of them valued at the market price shall be levied. Should the article have been embarked and the vessel still in port, the respective tribunals shall cause it to be landed, or, in case of resistance, shall proceed against the captain or supercargo of the vessel, imposing penalties on them equal to the degree and circumstances of the offence.

ARTICLE CXVI.—The exportation of goods not liable to duty being effected, without attending to the formalities prescribed, shall be punished with a fine equal to 10 per cent of their value, taken at the market price of the goods.

Section X.—Of other Cases wherein fines or penalties shall be incurred.

ARTICLE CXVII.—Besides the cases specified already in the respective articles of this tariff for levying penalties, there are others which incur them, should the following provisions be infringed:—

ARTICLE CXVIII.—If any foreign vessel, of whatever burden or form, or wherever she may have come from, be found loading or unloading goods of any kind at any coast, river, harbour, bay, or other place not pointed out by this tariff as a port for foreign vessels, she shall for this alone be confiscated, together with the cargo and all that belongs to her. The commander of said vessel shall be fined from 500 to 3000 dollars, according to the value of the cargo, and shall be condemned besides to from six months to five years of labour and banishment. All those who knowingly aid or protect the loading of said vessels, or the carriage of goods by land introduced into or carried out of places described in this article, shall suffer the following fines and punishments, viz.:—the owner, or his deputy, of the carts, beasts of burden, and every thing used in the transport of the effects, and the persons who receive the goods, as well as he who delivers, deposits, takes charge of, or conceals them, shall all undergo the same penalties and punishments—as the captain or supercargo of the vessel, and the other shall be punished by paying a tenth-part of the fine, and suffering a tenth of the punishment imposed on the principals.

National vessels shall be liable to the same penalties on coming from a foreign port and entering any of those not open to foreign commerce, if found shipping any effects whatever for a foreign country, and when they are found loading or unloading any kind of goods whatever at ports or places not open to foreign commerce, or to the coasting trade.

ARTICLE CXX.—All merchandise found in ports open to foreign commerce, or the coasting trade, which has been introduced, or be in the act of being introduced, without being subjected to the forms prescribed in this decree, and without observing any of the instructions or regulations issued by the government, shall be confiscated, together with all the boats, canoes, and vessels of every class.

ARTICLE CXXI.—Should said merchandise be prohibited, there shall be imposed besides the fines in Article XCVII.;—

ARTICLE CXXII.—Should they be goods of which the government has a monopoly, the importers and exporters who introduce them in another port or coast of the republic, together with him who delivers and receives them, shall suffer, besides the confiscation of the goods, vessels, cars, beasts for riding or of burden, with their harnesses, equipments, and arms, a fine of double the value of the monopolised goods, rated at the price of the monopoly at the respective places, and in default of payment shall be condemned to banishment for the term of from two to eight years.

ARTICLE CXXIII.—Should false money, whatever the metal may be, be found, besides the confiscation of every thing mentioned in the preceding article, and besides a fine equal to what the false money would represent if legal, the offender shall be punished with all the penalties inflicted by the law on coiners; should the offender be unable to pay the fine, the metal shall be melted, and held, together with all the property that may have been recovered, for the benefit of the informer, and those who seized it.

Passports.—The master of any vessel coming from a foreign port, shall immediately on his arrival in any of the ports of the Republic, declare in writing to the chief of the maritime custom-house, the number of passengers he has on board, the country to which they belong, their trade or occupation, and the place where they embarked. The penalty for neglect to comply with this regulation, or the making a false statement, is 100 dollars, and an additional fine of twenty dollars for each passenger omitted in the report. The vessel may be detained until the penalty be paid. Seamen, whose names are entered on the roll, are not considered as passengers.

Every foreigner shall, before he disembarks, declare his name, age, stature, place of birth, from whence he came, his destination, the object of his voyage, and his profession, which, when executed by the head of a family, will be sufficient for the women and children thereof.

The declaration above must be in writing, and signed by the person making the same.

This formality being complied with, the collector shall give to the foreigner a permit to disembark, subject, however, to the following rules:

1. That no Spaniard, or subject of the Spanish government, shall enter the Republic.

2. That any foreigner provided with a passport from the general government may disembark.

3. That the citizens of the new States of America, and the subjects of nations who may have agents officially accredited to the Republic, may also land, having passports granted, or examined by any Mexican agent at the place of embarkation, or on security of their consul in the port where they may arrive, or on that of any Mexican citizen.

The subjects of nations who are not comprehended in the foregoing paragraph, shall only be permitted to land with a passport of the General government, or with one granted or examined by any Mexican agent residing in a foreign country.

The foreigner to whom such permit is granted, must, within twenty-fours of having landed, present himself to the civil authority of the port.

Any foreigner permitted to introduce himself into the Republic as aforesaid, shall, within one month thereafter, solicit of the Supreme government, a *carta de seguridad* (card of safety), to remain in, and pass through the same for the period of one year; in order to obtain which, a certificate will be required from the officially accredited agent of the applicant, stating that he is a subject or citizen of the nation he represents, as also his occupation or profession.

Every foreigner, whatever his passport may be, must present himself to the civil authority of the place where he may have resided more than eight days; and, also, whenever he may change his place of residence; non-compliance with that provision subjects the party to a fine of twenty dollars.

Foreigners introduced and established agreeably to the regulations herein prescribed, shall be under the protection of the laws, and enjoy the same civil rights that are conceded by said laws to Mexican citizens, with the exception of acquiring real estates, which can only be held by citizens.*

Any foreigner who shall disembark and introduce himself into the territory of the republic contrary to the provisions of this decree, shall be expelled therefrom. As, also, any foreigner who shall be adjudged guilty of having used, for the purpose of his disembarkation, any document belonging to another, or for having suppressed or falsified any of the statements required, or for having counterfeited or altered any passport or *carta de seguridad*.

Every foreigner wishing to leave the republic, must make application for the proper passport, either to the General government or the civil authority of the state in which he may be.

* This exception does not extend to lands belonging to mining establishments in which aliens may hold shares. Aliens may purchase and hold land by permission of the general government for federal territory, or of the state governments for state territory. By the colonization law, aliens may also hold land, but one-fourth part of the colonists must be Mexicans.

CHAPTER XIV.

YUCATAN.

YUCATAN, though noticed under the head of Mexico as one of the states of that republic, may now be considered as entirely separated from those which had joined that, at all times, loosely-bound confederacy.

The state of Yucatan attained independence of Spain at the same time as Mexico. It had previously, under Spain, an administration unconnected either with Mexico or Guatemala. The last account of Yucatan, upon which we can place any reliance, is found in Mr. Stephens's very interesting work; which, however, is chiefly devoted to illustrate the wonderful ruins which he has explored in this Peninsula and in Central America.

His descriptions of the soil and climate are brief, and confined to the localities which he visited. We deduce from the information which he gives, that Yucatan is a country remarkable for bad roads, or rather the general want of roads,—a soil, in which stony and not very fertile districts, prevail; rich vegetation where there is moisture, on those soils of which fertility is the character; a general want of water; few good harbours; a hot climate; occasional forests, with wild beasts and reptiles; pastures, with herds of cattle; ranchos and haciendas; towns and villages with cathedrals and churches; a population ignorant and superstitious, yet towards him kindly disposed; with industry in a very backward state; with little trade, and few, or only rude, manufactures. But that Yucatan, notwithstanding a hot, and in many parts an unhealthy climate, and other disadvantages, is still capable of being important as a productive country, and of maintaining a large population.*

In alluding to the political state of Yucatan, Mr. Stephens says—

“Separated from Spain, Yucatan sent commissioners to Mexico, to deliberate upon forming a government, and on the return of these commissioners, and on their report, she gave up her independent position, and entered into the Mexican confederation as one of the states of that republic. Ever since, she has been suffering from this unhappy connexion, and a short time before our former visit, a revolution broke out all over the country, in the successful progress of which; during that visit, the last Mexican garrison was driven out of Yucatan. The state assumed the right of sovereignty, asserting its independent powers, at the same time not disconnecting itself entirely from Mexico, but declaring itself still a component part of that republic, upon certain conditions.”

The government of Yucatan has, since the deposition of Santa Anna, acted independently of Mexico. A separate customs' tariff has been published and acted upon, and whatever may hereafter be the destiny of this state, which, with an area of about 50,000 square miles, and a population variously estimated at from 450,000 to nearly 600,000 inhabitants, we need scarcely expect, nor can we desire, its re-annexation to the government of Mexico, which has hitherto exhibited so remarkable an incapacity for wise, or for efficient, administration. Since the commencement of the present war, between the United States of North America and Mexico, Yucatan has proclaimed its neutrality and independence.

* This corresponds nearly with the sketch of Yucatan which we have taken from Alcedo.

TABLE of Statistics of Yucatan, obtained by Mr. Stephens.

DISTRICTS.	PRINCIPAL PLACES.	Parishes.		Distance from the Capital.	Popula- tion.	P R O D U C T I O N S.
		No.	No.			
Capital.....	Merida.....	4	5	..	37,801	Horned cattle, horses, mules, tallow, jerked beef, leather, salt, gypsum, hemp (raw and manufactured), straw hats, guitars, cigars, and extract of logwood.
Campeachy.....	City of Campeachy.....	2	0	36	15,200	Salt, logwood, rice, sugar, and marble of good quality.
Lerma.....	Village of Lerma.....	3	8	37	10,567	Logwood, timber, rice, and fish oil.
Valladolid.....	City of Valladolid.....	11	17	36	63,164	Cotton, sugar, starch, gum-copal, tobacco, cochineal, saffron, vanilla, cotton-fabrics, yarns, &c., wax, honey, castor-oil, horned cattle, hogs, and skins.
Coast.....	City of Izamal.....	16	27	15	78,846	Horned cattle, horses, mules, tallow, jerked beef, castor-oil, hides, wax, honey, timber, indigo, hemp (raw and manufactured), straw-cigars, barilla, and salt.
The Upper Highlands...	City of Tekax.....	9	7	25	60,776	Horned cattle, horses, mules, hogs, sheep, skins, sugar, molasses, timber, rice, tobacco (in the leaf and manufactured), spirits arrow-root, straw-hats, cotton-lace, ochre, flints, and grind-stones.
The Lower Highlands...	Village of Teabo.....	8	6	17	42,188	Horned cattle, horses, mules, hogs, sheep, skins, tallow, dried beef, hemp (raw and manufactured), and cotton-lace.
The Upper Royal Road.	Town of Jeguelchakan..	6	11	26	54,447	Cattle, horses, mules, skins, tallow, dried beef, logwood, tobacco, sugar, and rum.
The Lower Royal Road.	Village of Maxcanu.....	5	7	14	41,726	Horned cattle, horses, mules, oil of palma Cristi, tobacco, hemp, and fine straw-hats.
The Upper "Beneficios"	Village of Ichmul.....	7	15	39	66,080	Sugar, molasses, rum, tobacco of good quality, rice, laces, pepper, gum copal, sarsaparilla, hats, hammocks, ebony, barilla, gypsum, and skins.
The Lower "Beneficios"	Village of Sotuta.....	6	16	22	49,443	Horned cattle, horses, mules, hogs, skins, tallow, and dried beef.
Tizimin	Village of Tizimin.....	7	18	41	37,168	Tortoise-shell, skins, timber, logwood, India-rubber, iucense, tobacco, achioté (a substitute for saffron, and a very rich dye), starch from the <i>yuca</i> , cotton, wax, honey, molasses, sugar, rum, castor-oil, salt, amber, vanilla, hogs, and cochineal.
Island of Carmen.....	Town of Carmen.....	2	1	80	4,304	Logwood.
Seiba-Plaza	Village of Seiba-Plaza...	3	6	42	8,183	Timber, rice, logwood, and salt.
Bacalar	Town of Bacalar.....	2	0	88	3,986	Logwood, valuable timber, sugar or inferior quality, tobacco of the best description, rum, a fine species of hemp (known under the name of <i>pita</i> , resin, India-rubber, gum copal, pimento, sarsaparilla, vanilla, and gypsum.
Total.....	15	91	143	..	578,939	

NUMBER of Inhabitants; taken from the Census of the 8th of April, 1841.*

TARIFF OF YUCATAN.

This state having declared its independence the following tariff regulations were adopted by the late Congress.

The ports open to foreign commerce, are Campeachy and Sisal. For exportation only the ports of Laguna and Bacalar are designated.

* This census is not considered to include the whole of the population, which is estimated to exceed half a million of souls.

The tonnage duty on foreign vessels, from foreign ports, is fixed at one dollar fifty cents per ton, according to her register. Vessels arriving in distress to be subject to charge, except that of their anchorage duty.

The officers, crew, and passengers of all vessels arriving in the port of Yucatan, are forbidden to land without a permit from the visiting health officer, under a penalty of 200 dollars.

The duties on importations, which shall not exceed 200 dollars, to be paid in cash; if exceeding that sum, to be paid by three instalments in the course of ninety days. The duties on exported articles to be paid on the clearance of the vessel.

Prohibited Articles.—The importation of the following articles is prohibited, under the penalty of confiscation, viz.: cotton, indigo, rice, sugar, trunks, hogs, chocolate, cover-lids, sacks, obscene pictures, beans, copper pans, grain, meal, yarn, soap (except scented), lard, molasses and honey, combs, skins (except morocco leather, clothing), salt, tallow, and candles, saddles, straw hats, tobacco, beef, shoes.

Articles Duty Free.—Live animals for improving breeds, newly-invented carriages, wooden houses; instruments of agriculture, of science, or of the arts; types for printing; books in sheets or bound; hops, sugar machinery; specie; iron and steel, for machinery; maps, exotic plants, leeches, seeds, turning machinery.

Export Duty.—All articles are free of duty for exportation, except the following:—Gold, in bars, or coin, one per cent; silver, two per cent; logwood, eight per cent. Every captain and supercargo is permitted to export 100 dollars worth of articles, free of duty, on account of the expenses of the vessel.

General Import Duty.—Flour, forty per cent ad valorem; olive, linseed, and whale oil, twenty; steel, twenty-nine; brandy, forty; codfish, twenty; empty bottles, twenty; cotton goods, fifteen; iron chains, fifteen; beef and pork in barrels, twenty; Cashmere goods, twenty; wax, forty; beer and porter in bottles, fifty; nails, fifteen; sheet copper, fifty; glassware, twenty; knives and forks, twenty; linen goods, fifteen; drugs, forty; brandy fruits, twenty; sewing thread, twenty; hams, twenty; liquors, forty; listadees, twenty; apples, twenty; mustard, twenty; muslins, twenty; paper, twenty; perfumery, forty; cheese, twenty; cutlery, twenty; watches, six; clocks, twenty; vinegar, forty; wines, forty.

CHAPTER XV.

AGRICULTURE, TRADE, AND MANUFACTURES OF YUCATAN.

MAIZE, or Indian corn, beans, pumpkins, squashes and camotes, a kind of potato, are the chief productions raised by the Maya or Indian population. Sugar-cane and hemp is cultivated on the haciendas. Horses, mules, cattle, hogs, and poultry, are reared; the two latter chiefly by the Indians. Generally the state of agriculture and the implements are rude. Wax and honey is one of the rarest products, and on the road from Sisal to Merida, he met large carts drawn by mules, five abreast, with high wheels ten or twelve feet apart, and loaded with hemp, bagging, wax, honey, and ox and deer-skins.

The *débris* of the ruined cities are found to fertilise the soil and the ground around. Uxmal is consequently considered excellent for *milpas*, or maize-fields.

Legally there is no slavery in Yucatan. No man can either buy or sell another man; but the poor thriftless Indians are generally compelled to attach themselves for necessities to some hacienda, and for the mere privilege of using the water. Mr. Stephens informs us that—

“They come under certain obligations of service to the master, which place him in a lordly position, and this state of things growing out of the natural condition of the country, exists, I believe, nowhere in Spanish America except in Yucatan. Each hacienda has its major-domo, who attends to all the details of the management of the estate, and, in

the absence of the master, is his viceroy, and has the same powers over the tenants. At this hacienda the major-domo was a young Mestizo, and had fallen into his place in an easy and natural way by marrying his predecessor's daughter, who had just enough white blood to elevate the dulness of the Indian face into one of softness and sweetness; and yet it struck me that he thought quite as much of the place he got with her as of herself.

The attachment of the Indians to their home is said to be very great; circumstances and habit bind the Indian and his wife together. He is seldom harsh to her,—if she is guilty of any great offence he brings her to the alcalde, who orders her to be whipped. He then goes quietly home with her. They share their labours and pleasures together, and with all their children attend village feasts.

THE MANUFACTURES OF YUCATAN are so very unimportant, that we can give no account of them further than, that a few rude articles are made in the towns and haciendas; that some coarse cutlery, and some coarse earthenware, and articles of leather and wood are made in the country. At the hacienda of Tankaché, amidst a logwood country, the proprietor has erected machinery for extracting the dye.

TRADE.—Of the trade we can say little, there being no accounts that we can discover kept of it. The logwood-trade and the turtle-fishery, and a few other articles, form the exports, and the imports of manufactured goods are subjected to the new tariff, which we have translated and introduced in the preceding pages. Smuggling, chiefly by vessels from the United States, and from the British West Indies, is extensively carried on.

TURTLE FISHING.—There are three kinds of turtle which inhabit these seas; the cahuamo, the eggs of which serve for food, and which is useful besides only for its oil; the tortuga, of which the meat as well as the eggs is eaten, also produces oil, and the shell is worth two reals the pound; and the karé, of which the shell is worth ten dollars a pound.

Mr. Stephens observes,—

"The fishermen say that the turtle which forms the delight of the *gourmand* is of the commonest kind, not worth killing for the sake of the shell, and therefore sent away alive. The karé he has never tasted. It is killed for the sake of the shell, and eaten by the luxurious fishermen on the spot. I immediately negotiated with the patron for the purchase of the shell. The outer scales of the back, eight in number, are all that is valuable. Their weight is estimated at four pounds, and the price in Campeachy, he said, was ten dollars a pound.

"The arbor in which we lived was no protection, and we were obliged to go inside the hut, which was snug and comfortable, the oil-jars being arranged under the eaves, with turtle-shells tied up carefully in bundles, and on the rafters hung strings of eggs; while nets, old sails, blocks, and other characteristic furniture of a fisherman's hut, filled up the corners. It was no hardship to be obliged to pass the afternoon among these fishermen, for their hardy, independent occupation gave manliness to their character and freedom to their speech and manners."

THE TOWN OF LAGUNA stands on the island of Carmen, which is about twenty miles long, and which, with another island about twelve miles in length, separates the Lake of Terminos from the Gulf of Mexico. This port is the depôt of the great logwood country in the interior, and ten to twelve vessels are usually there loading cargoes for Europe and the United States. The town is well built, and said to be thriving; but its commerce has been greatly restricted by the oppressive regulations of the central government of Mexico; but having made a *provinciamiento*, and disarmed and driven out the Mexican garrison, it is now considered independent, subject only to the state government of Yucatan.

SISAL.—This place has a roadstead which forms the port of Merida. Silan, Campeachy, and a few other places are frequented by the traders.

YUCATAN appears to be, in many respects, less improved than Mexico, and

far less romantic in its scenery than Central America. The inhabitants are described by Mr. Stephens as kindly disposed.

He observes that no map of Yucatan, to be depended on, has ever been constructed.

CHAPTER XVI.

BRITISH HONDURAS, OR BELIZE.

THE British district of Belize extends along the eastern coast of Yucatan, between 15 deg. 54 min. and 18 deg. 30 min. north latitude, and 88 deg. and 90 deg. west longitude. It is separated from Yucatan by the Rio Hondo, and its southern boundary is formed by the river Sarstoon, which falls into the Gulf of Honduras, not more than twenty miles west of the mouth of the Rio Dulce. Belize is in length about 175 miles from north to south, and 110 miles from east to west, and occupies an area of about 16,400 square miles.

It is termed British Honduras, but it is geographically a part of the Peninsula of Yucatan. About three years after the conquest of Jamaica in 1656, the English frequented Yucatan to cut and carry away logwood; and the British settlements in that country were originally settled with the free consent of the aboriginal and independent possessors of the country. The English maintained their settlements as regular occupants, under the government of Jamaica, in the year 1669. The English first visited, to cut logwood, the uninhabited coasts of Yucatan about 1662, and the privileges of cutting logwood were stipulated for with Spain in the treaty of 1670, usually called the American treaty. Two years afterwards these stipulations were violated. The first settlements were made near Cape Catoche, then at the Laguna de Terminos in Campeachy. The Spaniards in 1672, captured all English vessels which they found carrying logwood. In 1680, the English were expelled by a Spanish force from the Laguna de Terminos.

The shores of British Honduras are lined with numerous islands, or coral keys. They are covered with cocoa-nut trees and bushes, and resorted to by the fishermen to take turtle. The largest are Ambergrease Key, towards the north, and Turneff, opposite the town of Belize. These two keys consist of clusters of several small islands divided by narrow creeks and lagoons. A smaller key, called St. George's, is resorted to by the merchants of Belize, who have dwelling-houses on it. The shores of the continent are rocky, but low, except towards the south, where they are rather high and intersected by deep ravines. The river Belize flows down from an unexplored region. The low country near the sea is, in many parts, swampy, and partially covered with stagnant waters, nearly the whole year round—and during the rains it is completely covered. The higher grounds further inland have a sandy soil, and are chiefly overgrown with different kinds of pine, which supplies excellent timber. The valleys, which intersect the high lands, have a very fertile soil, and are covered with various species of tropical trees. South of the river Belize, the low country is thickly wooded, but it does not extend more than from three to six miles inland, behind which mountains arise. The country, comprising the mountain slopes and valleys, and the interior country, is covered with forests, and the soil is said to be very fertile.

The rivers are navigable from twenty to thirty miles from their mouths, but higher up they are interrupted by rapids and falls. Mahogany, dye-wood, and timber are floated down by these rivers. The most remarkable of which are, the Rio Hondo, the New River, the Belize, and the Siboon. On the banks of the latter there are extensive forests of mahogany. The Belize probably winds for more than 150 miles in its length. The Hondo is the most navigable river.

The climate is a compound of heat and moisture, yet Belize is considered more healthy than most of the West India islands. The mean annual temperature is 80 deg., but it is seldom oppressive, as from the beginning of July to the beginning of April, the air is refreshed by sea-breezes. From April to July is the dry season, during which the heat is excessive, but it is from time to time tempered by thunder-storms. During the remainder of the year rains are frequent, especially in July, August, and September. In the beginning of October the north winds commence, and generally continue with little variation to February or March, when the weather becomes extremely variable.

The soil is remarkably fertile. Sugar, coffee, cotton, and indigo might all be extensively raised, but their culture has been nearly altogether neglected. Arrow-root and rice are grown to a small extent. Cochineal is brought in and exported. Plantains, yams, mandioca, and maize, are grown for food. The most common fruits are oranges, lemons, limes, shaddocks, mangoes, guavas, cashew-nuts, tamarinds, avocado-pears, pomegranates, wild plums, and grapes. A few garden vegetables are cultivated. In the forests many varieties of trees abound, as cabbage-trees, cedars, pines, iron-wood, silk-cotton trees, log-wood, fustic, and brasiletto; and the most important of all, the mahogany tree. Sarsaparilla is collected in the southern districts. The wild animals are ounces, panthers, tapirs, deer, antelopes, peccaries and warrees (animals of the hog kind), cavies, agoutis, armadilloes, opossums and racoons; monkeys are numerous, and some of them are eaten. Manatis and alligators are met with in the lagoons along the coast. Among the numerous birds are turkeys, spoon-birds, toucans, Muscovy ducks, two species of macaws, and many kinds of parrots, pelicans, and humming-birds. Fish are plentiful and of various kinds; some are very large. Fish and turtle are used as substitutes for meat. Lobsters and shell-fish are abundant and excellent. Cattle, sheep, and goats are kept, but not sufficient for the consumption. Cattle are imported from Truxillo and Omoa. Gold has been found in one of the streams of the Belize.

POPULATION.—The number of the inhabitants is stated in the superintendent's returns for 1845, at 240 white males, 159 white females—total whites, 399; coloured males 6755, coloured females 2655—total coloured, 10,410. Total population, 10,709. This population is chiefly composed of negroes, who were first brought to the country as slaves, but many of them obtained their liberty long ago, and worked at daily wages. There seem to be no aboriginal tribes within the territories of Belize, except some Caribes, who have fled into it as a place of refuge. The white inhabitants are exclusively occupied in commerce, and the negroes in cutting mahogany and dyewoods, and in fishing. A few of them cultivate small patches of ground.

BELIZE, the only town, is built on both sides of the mouth of the river of the same name, and the stream is crossed by a wooden bridge. It consists of a long street running along the sea-shore, from which three or four smaller streets branch off. The houses are constructed of wood, and are raised eight or ten feet from the ground on pillars of mahogany; they are well built, spacious and convenient. In front of the town there is excellent anchorage for vessels of moderate size, and the surface of the sea is rarely agitated by winds, as it is protected by the numerous keys from the heavy swells of the open sea.

PUENTA GORDA.—They entered Puente Gorda, a settlement of Caribs, about 150 miles south of Belize. Cotton, rice, the cohoon, banana, cocoa-nut, pineapple, orange, lemon, plantain, and other fruits, were growing in luxuriance. There were in the settlement about 500 inhabitants—formerly natives of the sea-coast below Truxillo, but having taken part against Morazan, they fled to this place.

During the year 1845, in consequence of the duty on mahogany in England being reduced to a nominal amount, the trade was greatly increased.

The government is administered by a superintendent, an executive council assembly and an assembly, called a public meeting. There is a chief justice, colonial secretary, provost marshal, and other officers.—(For the statistics of the colony, see *British Possessions in America*.)

CHAPTER XVII.

THE MAHOGANY TREE OF HONDURAS.

MAHOGANY-TREE (*Swietenia Mahoganii*). There are rather more different qualities, than varieties, of this beautiful tree in America and the West Indies. That of Cuba and Hayti, usually called Spanish mahogany, and that of the same kind, now scarce, which grows in Jamaica, is the most beautiful in its shades, colours and variegations. Honduras and Yucatan now supply the larger quantities; and although not so close grained and beautiful as the former, yet furnishes a most useful wood, and it has lately been extensively used for ship-building. It is superior, also, to the other for the tenacity with which glue binds it to other woods, and even to veneers of Cuba or Hayti mahogany,—worms do not destroy it in the water.

We find generally in many accounts written of the operations of bringing mahogany to market the most inaccurate descriptions. The following account condensed from an article written at Belize and published in the Honduras Almanac, has been examined by a gentleman who was a resident, and connected with the business. We, therefore, may consider it accurate.

The mahogany-tree of Honduras is probably the most magnificent and splendid of all trees; the largest oak, usually called the King of the Forest, would dwindle to insignificance in the comparison. The enormous size and height of the trunk; the vast spread of its branches, the space of ground occupied by its roots, are all remarkable.

“It becomes almost impossible to give the more minute circumstances attending the growth of this valuable and much-used tree, as its progress to maturity is scarcely perceptible within the life of man; but as far as our limited observation will allow us to form an opinion, not less than an average period of 200 years can be allowed as the time of its coming to full growth or fit for cutting.”

“Various and differing are the conjectures relative to the first use, discovery, and introduction to Britain of this beautiful wood, nor is it within the limits of such a sketch as this to remark upon their accuracy; we therefore reject all accounts that appear speculative, and confine ourselves to such as are authenticated. Its first discovery was, therefore, by the carpenter on board of one of Sir Walter Raleigh’s vessels, when he put into some harbour in the island of Trinidad in the year 1595, who, having occasion to go on shore to cut some pieces of timber, required for work to be done on the ship that he belonged to, brought on board a quantity of this wood, which, on being worked from the

raw state, exhibited, to the astonishment of all who saw it, that beautiful natural variety of appearance which no ingenuity of art can equal.

"The first use to which mahogany was applied in England arose from a circumstance purely accidental, and was appropriated to the making of a box for holding candles. Dr. Gibbons, an eminent physician, in the latter end of the seventeenth or beginning of the eighteenth century, had a brother a West India captain, who brought over some planks of this wood as ballast, but was not aware of its value. As the doctor was then building a house in King-street, Covent-garden, his brother thought they might be of service to him; but the carpenters finding the wood too hard for their tools, they were laid aside as useless. Soon after Mrs. Gibbons wanting a candle-box, the doctor called on his cabinet-maker, to make him one of some wood that lay in his garden. Wallaston, the cabinet-maker, on cutting it up also complained that it was too hard; the doctor said that he must get stronger tools. The candle-box was, however, made, and highly approved of, inasmuch that the doctor then insisted on having a bureau made of the same wood, which was accordingly done, when the fine colour, beautiful polish, &c., were so pleasing that it became an object of curiosity, and he invited all his friends to come to see it,—among them was the Duchess of Buckingham. Her grace begged some of the same wood from Dr. Gibbons, and employed Wallaston to make her a bureau also, on which the fame of mahogany became general. Thus, from a circumstance in itself so trivial has emanated a most extensive branch of British commerce; and as the cutting and preparing of the mahogany is a matter which has been hitherto passed unnoticed by all historians, we trust that a brief narrative may be here acceptable to our readers."—*Honduras Almanac*.

The season for cutting the mahogany usually commences about the month of August. The gangs of labourers employed consist of from twenty to fifty each.

"They have a conductor, who is styled the captain. Each gang has also one person belonging to it, termed the huntsman—he is generally selected from the most intelligent of his fellows, and his chief occupation is to search the woods, or, as it is called in this country, the bush, to find labour for the whole. Accordingly, about the beginning of August, the huntsman is despatched on his important mission, and if his owner be employed on his own ground, that is seldom a work of much delay or difficulty. He cuts his way through the thickest of the woods to some elevated situation, and climbs the tallest trees he finds, from which he minutely surveys the surrounding country. At this season the leaves of the mahogany-tree are invariably of a yellow reddish hue, and an eye accustomed to this kind of exercise can, at a great distance discern the places where the wood is most abundant. He now descends, and to such places his steps are directed, and, without compass, or other guide than what observation has imprinted on his recollection, he never fails to reach the exact spot to which he aims. On some occasions no ordinary stratagem is necessary to be resorted to by the huntsman to prevent others from availing themselves of the advantage of his discoveries; for if his steps be traced by those who may be engaged in the same pursuit, which is a very common thing, all his ingenuity must be exerted to beguile them from the true scent. In this, however, he is not always successful, being followed by those who are entirely aware of all the arts he may use, and whose eyes are so quick that the lightest turn of a leaf or the faintest impression of the foot, is unerringly perceived—even the dried leaves which may be strewed upon the ground often help to conduct to the secret spot,—and it consequently happens that persons so engaged must frequently undergo the disappointment of finding an advantage they had promised to themselves seized on by others. The hidden treasure being, however, discovered, the next operation is the felling of a sufficient number of trees to employ the gang during the season. The tree is commonly cut about ten or twelve feet from the ground, a stage being erected for the axe-man employed in levelling it; this, to an observer, would appear a labour of much danger, but an accident rarely happens to the people engaged in it. The trunk of the tree, from the dimensions of the wood it furnishes, is deemed the most valuable; but for purposes of an ornamental kind, the limbs, or branches, are generally preferred, the grain of them being much closer, and the veins more rich and variegated."

A sufficient number of trees being felled to occupy the gang during the season, they commence opening roads to the nearest river, which operation amounts to two-thirds of the labour and expense of bringing the mahogany to a place of shipment. Each mahogany station forms in itself a small village, on the bank of a river,—the choice of situation being always regulated by the proximity of such river to the mahogany intended to be cut.

In the construction and arrangement of the habitations much taste is often displayed, and it is curious to remark the different modes peculiar to the several nations or tribes of Africa, contrasted with the improvement introduced by European experience in the construction of the houses,—among which the proprietor's residence, with storehouses, cattle-sheds, &c., are conspicuous—those of the different labourers are usually of more humble appearance; but all built of the same wood, which the site affords in abundance.

“We have frequently seen houses of the kind completed in a single day, and with no other implement than the axe; consequently every workman is capable of performing the labour required to build his own dwelling. After completing this establishment, a main road is opened from it, in as near a direction as possible to the centre of the body of trees so felled, into which branch or wing roads are afterwards introduced. The ground through which the roads are to run being yet a mass of dense forest, both of high trees and underwood, they commence by clearing away the latter description with cutlasses which, although in appearance a slender instrument, yet from the dexterity with which it is used, answers the purpose admirably. This labour is usually performed by task-work, of 100 yards each man per day, which expert workmen will complete in six hours. The underwood being removed, the larger trees are then cut down by the axe, as even with the ground as possible, the task being also at this work 100-yards per day to each labourer, although this is more difficult and laborious, from the number of hard woods growing here, which, on failure of the axe, are removed by the application of fire. The trunks of these trees, although many of them valuable for different purposes, such as *bullet-tree*, *ironwood*, *redwood*, *sapodilla*, &c., are thrown away as useless, unless they happen to be adjacent to some creek or small river which may intersect the road; in that case they are applied to the constructing of bridges across the same, which are frequently of considerable size, and require great labour to make them of sufficient strength to bear such immense loads as are brought over them.”

The distance of road to be cut each season depends on the situation of the mahogany-trees. If they are much dispersed, miles of road, and many bridges, are made to a single tree, that may yield but one log. The roads, cleared of all brushwood, require hoes, pickaxes, and sledge-hammers, to level down the hillocks and break the rocks, and loosen the stumps which would impede the wheeled trucks on which the logs are carried. The roads being formed generally by the month of December; the *cross-cutting*, as it is called, commences; that is dividing crosswise, by means of saws, each tree into logs, according to their length. Some trees are but long enough for one log, others will admit of four or five being cut from the same trunk. The rule for dividing the trees into logs, is to equalise the loads the oxen have to draw. This, however, does not altogether obviate irregularity of weight, and extra oxen are kept in readiness to add to the usual number, according to the weight of the log. Owing to the very great difference of diameter and length of the mahogany-trees, the logs taken from one tree may not measure more than 300 cubic feet, while those from the next may be as many thousands; the largest log ever cut in Honduras was in length seventeen feet; breadth, fifty-seven inches; depth, sixty-four inches; measuring 428 cubic feet, or 10.28th tons, of forty cubic feet, and 5168 superficial feet, of one inch thick; weighing about fifteen tons.

“The sawing being completed, the logs are separated one from the other, and placed in whatever position will admit of the largest square being formed, according to

the shape which the end of each log presents, and is then reduced, by means of the axe, from the round or natural form, into the square; although some of the smaller logs are brought out in the round, yet, with the larger description, the making them square is essential, not only to lessen their weight, but also to prevent their rolling on the truck or carriage."

In the month of March, all the preparation before described is, or ought to be, completed—this is the dry season, or time for drawing the logs from the place of their growth to the river. This can only be carried on in the months of April and May, the ground for all the rest of the year being too soft for heavily-laden trucks to pass over it without sinking. The rains usually terminate in February, but the ground is so saturated with water that the roads are seldom fit for use till the 1st of April.

"The mahogany cutter's harvest may be at this time said to commence, as the result of his season's work depends upon a continuance of the dry weather, for a single shower of rain would materially injure his roads. The number of trucks worked is proportioned to the strength of the gang, and the distance generally from six to ten miles. We will, for example, take a gang of forty men, capable of working six trucks, each of which requires seven pair of oxen and two drivers, sixteen to cut food for the cattle, and twelve to load or put the logs on the carriages; which latter usually take up a temporary residence somewhere near the main body of the wood, it being too far to go and return each day to the river-side, or chief establishment. From the intense heat of the sun, the cattle would be unable to work during its influence; consequently, they are obliged to use the night-time in lieu of the day, the sultry effects of which it becomes requisite to avoid. The loaders, as before mentioned, being now at their station in the forest, the trucks set off from the barquadier about six o'clock in the evening, and arrive at their different places of loading about eleven or twelve o'clock at night. The loaders, being at this time asleep, are warned of the approach of the trucks by the cracking of the whips carried by the cattle-drivers, which are heard at a considerable distance; they arise and commence placing the logs upon the trucks; which is done by means of a temporary platform laid from the edge of the truck to a sufficient distance upon the ground, so as to make an inclined plane, upon which the log is gradually pushed up from each end alternately. Having completed their work of loading all the trucks, which may be done in three hours, they again retire to rest till about nine o'clock next morning. The drivers now set out on their return, but their progress is considerably retarded by the lading; and although well provided with torchlight, they are frequently impeded by small stumps that remain in the road, which would be easily avoided in daylight; they, however, are in general all out at the river side by eleven o'clock next morning, when, after throwing the logs into the river—having previously marked them on each end with the owner's initials—the cattle are fed,—the drivers breakfast and retire to rest until about sunset; when they feed the cattle a second time, and yoke in again.

"Nothing can present a more extraordinary appearance than this process of trucking, or drawing down the mahogany to the river. The six trucks will occupy an extent of road of a quarter of a mile; the great number of oxen—the drivers half-naked (clothes being inconvenient from the heat of the weather and clouds of dust) and each bearing a torchlight—the wildness of the forest scenery—the rattling of chains—the sound of the whip echoing through the woods—then all this activity and exertion so ill corresponding with the silent hour of midnight makes it wear more the appearance of some theatrical exhibition than what it really is, the pursuit of industry which has fallen to the lot of the Honduras woodcutter.

"About the end of May the periodical rains again commence. The torrents of water discharged from the clouds are so great as to render the roads impassable in the course of a few hours, when all trucking ceases—the cattle are turned into the pasture—and the trucks, gear, and tools, &c., are housed.

"The rain now pours down incessantly till about the middle of June, when the rivers swell to an immense height; the logs then float down a distance of 200 miles, being followed by the gang in pitpans (a kind of flat-bottomed canoe) to disengage them from the

branches of the overhanging trees, until they are stopped by a boom placed in some situation convenient to the mouth of the river. Each gang then separates its own cutting, by the marks on the ends of the logs, and forms them into large rafts, in which state they are brought down to the wharfs of the proprietors, where they are taken out of the water and undergo a second process of the axe to make the surface smooth; the ends, which frequently get split and rent, by being dashed against rocks in the river by the force of the current are also sawed off, when they are ready for shipping.

"The average expense of mahogany cutting is usually estimated at 100*l.* Honduras currency, or about 70*l.* sterling, each labourer per annum, independent of the capital sunk in the purchase of the works, cattle, trucks, gear, craft, tools, &c." (*See account of the mahogany and Honduras trade, under the head of British Possessions in America.*)

The LOGWOOD-TREE (*Haemaloxylon Capechianum*, Lin.)—This is also a magnificent tree, but far inferior to the mahogany-tree; yet it is a valuable tree in commerce, and the early history of resorting to Campeachy and Honduras to cut it, by adventurers from Jamaica, and by others who were little superior to pirates, is remarkable for daring intrepidity. It is said to thrive best in a wet clayey soil. The wood is so heavy as to sink in water. It is hard, very compact, and, although it takes a fine polish, is chiefly valuable on account of its colouring matter. In his work on Permanent Colours, Bancroft remarks:

"Logwood seems to have been first brought to England soon after the accession of Queen Elizabeth; but the various and beautiful colours dyed from it proved so fugacious, that a general outcry against its use was soon raised; and an act of parliament was passed in the twenty-third year of her reign, which prohibited its use as a dye under severe penalties, and not only authorised but directed the *burning* of it, in whatever hands it might be found within the realm; and though this wood was afterwards sometimes clandestinely used (under the feigned name of blackwood), it continued subject to this prohibition for nearly 100 years, or until the passing of the act 13 and 14 Charles II.; the preamble of which declares, that the ingenious industry of modern times hath taught the dyers of England the art of fixing colours made of logwood, *alias* blackwood, so as that, by experience, they are found as lasting as the colours made with *any other sort of dyeing wood whatever*; and on this ground it repeals so much of the statute of Elizabeth as related to logwood, and gives permission to import and use it for dyeing. Probably the solicitude of the dyers to obtain this permission, induced them to pretend that their industry had done much more than it really had, in fixing the colours of logwood; most of which, even at this time, are notoriously deficient in regard to their durability."—(*See Trade of Honduras, under the head of British Possessions.*)

CHAPTER XVIII.

THE MOSQUITO TERRITORY.

HONDURAS, with the exception of British Honduras, is situated to the south of the Gulf of Dolce and of the Bay of Honduras. The Mosquito Territory extending along from its eastern boundary to the sea. Although part of Spanish Honduras has been long resorted to by the English, we really know little of this country at the present time.

According to Juarras, Honduras and the Mosquito territories together, are 399 miles long, and about 150 wide, area 48,500 square miles. He says,

"The climate of this country is good. The air, excepting on the eastern shore and near the morasses, being pure and wholesome. The soil in most parts is exceeding fertile, abundantly producing corn, vegetables, and fruits. They have a threefold crop of maize in the year, and the vines produce grapes twice in the same period. The pastures

are excellent, and the country furnishes all kinds of provisions: but for want of cultivation and settlements, the greater part of it is in a state of nature. It has many good and serviceable small rivers, and is well watered. It has several mountains in its extent, in which are gold and silver mines, and the face of the country is agreeably diversified into valleys, plains, and eminences, overspread in most parts with thick forests. Honey, wool, cotton, wax, mahogany, and logwood, with other dyeing drugs, are its chief products; the latter forming an immense part of its exports, and from which its chief importance is derived."

Spanish Honduras has detached itself from the other republics of Central America, and hostilities have been maintained almost without interruption between this wild country and the state of Guatemala—the latter being under the sway of a young uneducated Indian of the name of Carrera.

The MOSQUITO TERRITORY has never been subjugated, nor occupied by Spain.

According to the boundaries laid down in 1777

"The Mosquito Shore, in America, extends from the northern branch of the Desaguaders (evidently the San Juan), in 10 deg. 21 min. to Cape Gracias a Dios, in 15 deg. north latitude, and from Cape Gracias a Dios, in 82 deg. 40 min. to Cape Castile, or Cape Honduras, in 86 deg. west longitude from Greenwich."

After the English were compelled to leave this territory in 1787, in consequence of the articles quoted from the treaty of 1783. We find the following remarks among the representations made to the government on the case of those settlers.

Spain has certainly never conquered the aboriginal occupiers of this country, and the inhabitants of this coast are, at this day, perfectly independent. The following sketches upon the authority of the records of the Board of Trade and Plantations, will illustrate the British connexion with a territory, whose prince and people continue to look up to England for protection.

Some time after the conquest of Jamaica by the expedition sent forth by Oliver Cromwell, in 1656, the Mosquito king, with the concurrence of his chiefs and people, placed themselves under the protection of Charles the Second; and the governor of Jamaica, in the name of his sovereign, accepted this union, and promised them the royal protection. They continued faithful to the *pact*, and whenever the British crown declared war against Spain, they readily acted as allies, with both vigour and success against the common enemy. A long time, however, had elapsed before any regular British settlement was established on the Mosquito Shore; but many individual adventurers passed, from time to time, from Jamaica to that coast, and traded with the natives for tortoise-shell, sarsaparilla, and deer-skins; and, *under their protection, bartered British commodities for Spanish gold.* This transient commerce on the Mosquito coast, and the logwood-trade carried on by the British settlement in the province of Yucatan, on the western parts of the Bay of Honduras, Spain thought proper so unjustly to interrupt, by capturing the ships of British subjects in that part of the world, as to cause the war of 1739, which continued to the peace of 1748. Prior to this period, the governor of Jamaica had appointed justices of peace on the Mosquito Shore, with authority (besides the discharge of the ordinary duties belonging to their functions as justices), to decide commercial questions of contracts and of debts. During the war, the importance of that country was so fully understood, that the British government determined to hold it under the immediate sovereignty of Great Britain. The king appointed a superintendent to preside over the settlements on the Mosquito coast, and to cultivate and preserve the friendship of the aboriginal inhabitants; and also to promote the interests and extend the commerce of his majesty's subjects residing there. Captain Robert

Hodgson, the first superintendent, proceeded, in 1749, with the command of one hundred men, drafted from the troops at Jamaica, and took possession of the principal station at Black River, on the Mosquito coast, where he erected a fort, mounted it with cannon, hoisted the royal flag, and kept up a garrison; thus making a formal publication to all the world, and to the crown of Spain, that the independent country of the Mosquito coast was under the direct sovereignty and protection of Great Britain.

From this time, during the peace, and until the conclusion of the war of 1756, the Mosquito Shore continued to be a military, federal, protected province of Great Britain. In the treaty of peace concluded in 1763, the 17th Article had no connexion whatever with the Mosquito Shore; but the ministers of the day seem to have but little understood the history and importance of that country. In the negotiation they were imposed upon by the court of Spain, and gave orders, in 1764, for demolishing the fort at Black River, and withdrawing the garrison to Jamaica. They were soon afterwards convinced of the impolicy of this decision, and approved of the conduct of Superintendent Otway, in refusing the Spaniards admission into the country. Future administrations continued to support the settlements, and to maintain the sovereignty of the crown over the Mosquito Territory, in such a manner as to silence the pretensions of Spain to any dominion over it.

From the first establishment of a superintendent on the coast, and of a garrison at Black River, the colony increased in population and prosperity, notwithstanding the various secret attempts of the Spaniards to oppress the Indians and the settlements during his administration.

A new system of administration was formed by Lord Dartmouth, in August, which Governor Sir Basil Keith put in execution in December, 1775. This system consisted of a Council of Government, of which the superintendent was president; of a Court of Common Pleas, and of a Bench of Justices of Peace. Appeals were to lay from the Justices of Peace to the Court of Common Pleas; from the Court of Common Pleas to the Council of Government; and from the Council of Government to the Governor and Council of Jamaica. Superintendent Hodgson was ordered home to London, and Sir Basil Keith appointed John Ferguson, Esq. to act as superintendent, *pro tempore*.

In 1777, some of the principal settlers sent to England an assortment of sugars, rum, indigo, bark, sarsaparilla, tortoise-shell, &c., in two vessels, the *Neptune* and the *Hope*; the first in October, 1777, the other about January, 1778. The *sugars in both*, and the *sugars only*, were refused admission at the custom-house; which obliged them to go to a foreign market. The objection to admitting the sugars, was a clause in the 6th of George III., c. 52, which declares "*that sugars imported from British Plantations on the continent of America, shall be deemed French sugars,*" and pay duties accordingly.*

* On the question being referred to the Lords of Trade, they gave a cautious opinion, as follows:—

"Tuesday, April 27th, 1776.

"Agreeable to the resolution of the 20th instant, their lordships having again resumed the consideration of the memorial of the inhabitants of the Mosquito Shore, and having also read and considered a second memorial of the said inhabitants upon the like subject, referred by Sir Grey Cooper, under the direction of the Lords of the Treasury; and likewise a letter from Mr. Jackson, stating his opinion upon the Act mentioned in the said memorials, they were of opinion that, though the Mosquito Shore is indisputably part of the great American continent, it cannot be considered as one, or any part of one of the British Colonies or Plantations thereupon, in the sense or spirit of the Act of the sixth of his present Majesty, but superintended dependently on the Island of Jamaica; and therefore, that the produce of the Shore should not be made subject to the restrictions of the clause in question."

The actual number of persons, exclusive of the aborigines, under the British jurisdiction in the year 1757, according to the account of their superintendent, Colonel Hodgson, was about 1100 souls; and in the year 1770, Mr. Edwards estimated the number at 1400. The greater part of them were settled at Black River, Cape River, and Brancmans:—the former place, where the British had erected a small fort, was the only one of the deserted settlements which the Spaniards dared even attempt to take into their possession; but they were immediately driven from it by the Indian general, Robinson. The remainder of the British, at Cape Gracios à Dios, Sandy Bay, Pearl Kay Lagoon, the Corn Islands, Bluefields, Punta Gorda, Brewers Lagoon, Plantain River, Miztiseo Creek, and other parts of the coast, as far southward as Chiriqui Lagoon, were never molested. They owned twelve merchant vessels, several of them in the European trade, the others constantly trading to Jamaica and the United States; and their exports of mahogany, sarsaparilla, tortoise-shell and mules; together with specie, indigo, cocoa, hides, and tallow got in barter with the Spaniards, were very considerable, and daily increasing.

Of the great national advantages of this country there is now no reason to doubt. There is sufficient proof that several parts of it are decidedly more salubrious than any one of our settlements in the West Indies. It is well known, that if men are located in low marshy ground, in the neighbourhood of stagnant water, the consequences are injurious to them in every country, but more especially in a hot climate:—but in dry situations similar to the Valiente and Bluefields settlements, where the waters quickly run off, Europeans, generally speaking, enjoy an almost uninterrupted state of health, and live to a good old age. In such situations, the general mass of European cultivators could, with safety, perform more than double the work done by the Valientes, or any other tribe of Indians. Many of the dry savannahs, and fine ridges, are equally healthy; but it is in the interior, on the banks of the rivers, that agriculturists should form settlements; and many thousands could find such situations in the hilly country behind the Kharibee settlements, without putting any of the native residents to inconvenience. According to Mr. Roberts—

“The mosquitoes, sandflies, and other insects; the poisonous reptiles, and wild beasts, of which so much is said in England, are, as regards the situations alluded to, mere bugbears to frighten children; the former are only troublesome on the low sandy beaches and swamps, some settlements being entirely clear of them; and the latter seldom come near the habitations of men, or do any harm. It has been asserted, and I am more inclined to confirm than deny it, that nearly the whole line of coast from Cape Honduras to the River San Juan, is free from those violent hurricanes which sometimes rage with such destructive fury in the West India Islands; and it has also been affirmed, that the same tract of country is not subject to those dreadful earthquakes which have so often shaken, and at one time or other, almost entirely destroyed the Spanish American towns towards the Pacific Ocean; spreading death and dismay amongst the wretched inhabitants.”

The Mosquito country affords almost inexhaustible supplies of cedar, mahogany, santa maria wood, rosewood, and many other exceedingly valuable timbers may be obtained on the coast, and on the banks of all the rivers in the interior:—dye-woods, gums, drugs, and medicinal plants of various descriptions, are plentifully dispersed all over the country. On the savannahs are reared considerable numbers of cattle; and innumerable herds could be pastured on the plains close to the shore, as well as in the interior. The soil is well adapted to the cultivation of sugar, coffee, cotton, tobacco, indigo, and all the other productions of a tropical climate; rice and Indian corn might be produced, to supply the whole of our

West India possessions.—Such are the resources of a country which has been shamefully neglected though not altogether abandoned by England.

If we examine all the circumstances, bearing upon the claims of right to possession and occupancy; and if we consider that Spain has lost all dominion on the continent of America, we are reasonably led to the conclusion that the Mosquito Territory is still an independent country, and one over which Spain never had the least control or occupation. It is evident that none of the anarchical states of Central America have any right by occupation, or by recognition, to the Mosquito country. If we contend that the country is independent, a question arises as to how far its king or rulers, and more than all its inhabitants, are under the protection or sovereignty of England. The English from Jamaica, and all who speak the English language, who have frequented it since 1787, have found the same favour among the people as formerly; the Spanish races continue to be, as formerly, detested and held as enemies. Mr. Roberts's accounts of the coast, as well as all the more recent information we have received, are perfectly conclusive as to the accuracy of these facts. The misfortune has been that the Mosquito kings themselves, and the Zamboes, the people who possessed most authority, have manifested but little wisdom or justice in the country.

On the 17th of April, 1846, the British sloop of war *Hyacinth* arrived at Bluefields for the purpose of carrying the young king, George Augustus Frederick, to Belize, to be crowned according to ancient usage, which was performed by the commissary of the Bishop of Jamaica on the 7th of May, 1845, in St. John's Church, Belize, in the presence of the superintendent, Colonel Fancourt, Mr. Walker, British agent at Bluefields, and several chiefs. The young king was treated with great attention by Colonel Fancourt. It appears, from the last information which we have obtained, that considerable progress in the way of improvement has been made during the last four years, but we must admit that the manners and customs of the inhabitants still require thorough regeneration. In order to bring forward the productive elements of the country a great addition to the population and capital are necessary. With these elements the Mosquito Territory would become a wealthy and important country.

The British government has appointed the resident agent to reside at Bluefields River. Without directly interfering in the affairs of the government, he offers to king and chiefs counsel and advice, and maintains the alliance and protection of England.

The Governor of Jamaica has always, and up to the present time, been charged with the superintendence of all communications with the Mosquito Shore.

The territory of the Mosquito country, as hitherto claimed by the kings, extends from Cape Honduras south to *King Buppa*, or landing-place, near the Escuda de Veragua, and comprises the sea-coast of the following provinces, viz., PROVINCE OF HONDURAS, including Cape Honduras, Roman River, Black River, Potook River, Cape Gracios à Dios, and Wava River.

PROVINCE OF NICARAGUA, including Bluefields River, San Juan River, and Vankes River.

COSTA RICA, including Salt River, &c.

VERAGUA, including Bocca de Toro, Bocca de Chiriqui, Escuda de Veragua.

The government of Grenada claims the Bocca de Torro, Bocca de Chiriqui, and the Escuda de Veragua. Central America also claims a part, but the Spaniards never appear to have occupied them.

BLUEFIELDS, with its excellent harbour, protected by a rocky, bluff point, capable of being made almost impregnable, is in an excellent situation for opening a communication across the country to the Lakes of Nicaragua, and possesses many other advantages as a maritime and commercial station. It would become,

under a wise government, a place of considerable importance. It is annually frequented by British, United States, and some Columbian trading vessels, bringing variously assorted merchandise in exchange for tortoise-shells, vanilla, sarsaparilla, &c.

The *Great Cape* or *Vankes*, or *Wanks River*, is said to have its source in the mountainous country, from which, near the Pacific, the Bluefields River originates. The Buccaneers, 158 years ago, in 1688, forced their way from the Gulf of Fonseca, on the Pacific, across the mountains, to the Spanish town of Nueva Segovia, and from thence, after crossing a formidable pass, and defeating the Spaniards, they arrived at the river Vankes, which they descended on small rafts or *pipirees*, between the shallows and cataracts; and, after crossing which, they made their way down to the Atlantic.

The *Cape River* enters the ocean some distance to the northward of the bay, or harbour, and there is a shallow, canal-like communication, from the uppermost part of the latter, into the river, passable by canoes; and which might easily be enlarged so as to enable small vessels to avoid the dangerous bar of the river on which there is seldom more than four or five feet water. If commercial establishments were formed at the Cape, vessels might lie in safety at the upper end of the harbour all the year round; and if sufficient encouragement were given, the valuable products of the interior would be collected, brought down the river, and, by the communication alluded to, into the bay, and shipped at all seasons of the year.

TRADE AND NAVIGATION.

The trade is chiefly an irregular coasting trade, and an account of it cannot be accurately ascertained.

In 1844, a proclamation was issued by the Mosquito government, in accordance with the approbation of the British agent, by which it is provided,

1. That a tonnage duty of a quarter of a dollar per register ton shall be levied on all decked vessels, Spanish barques, and other large boats carrying merchandise for the purpose of trade on the coasts and in the ports of the Mosquito territory and its islands.

Vessels not breaking bulk and not landing any part of their cargoes, may remain forty-eight hours without payment of such duty.

2. That Bluefields shall be a free warehousing port for goods to be deposited in the general warehouse until reshipped.

3. On payment of said tonnage duty vessels may trade in any Mosquito port for three months.

4. After the 1st of January, 1845, all turtling vessels to have licences, for which sixteen dollars per annum to be charged.

Each turtling vessel without such licence to be fined fifty dollars—and the seizure of the turtle and shell found on board.

5. The destroying of turtle eggs strictly forbidden, under a fine of five dollars for each offence.

6. Licence must be obtained for selling spirits; for each licence ten dollars to be paid.

Penalty, ten dollars, and seizure of liquors.

The charge payable to the crown for cutting mahogany is two dollars each tree.

Poll taxes were previously levied throughout the whole country, abolished in 1844, by proclamation.

An ensign and standard for the Mosquito nation were sent to the country from England.

The return of trade of Bluefields for 1844, included no duties of British entry, while the return for 1845, shows imports to the amount of 2708*l.* sterling, and exports, the produce of the country, to the amount of 750*l.* sterling. Foreign imports also to have increased to 1428*l.* sterling. But these statements embrace only a part of the trade, having little of the import trade.

Gross Return of British and Foreign Trade at the Ports of Bluefields and Corn Island.

CENTRAL AMERICA; OR, GUATEMALA.

CHAPTER I.

GEOGRAPHICAL POSITION—CONFIGURATION—CLIMATE—POPULATION—MINERALS—FORESTS—WILD ANIMALS—LAKES—AND RIVERS.

CENTRAL AMERICA, or Guatemala, extends from about 8 deg. to 18 deg. north latitude, and between Cape Gracios à Dios, on the Caribbean Sea, in 82 deg. 30 min. and Point Cosiguina, on the Pacific Ocean, in 94 deg. west longitude.

The area, estimated by Humboldt was about 125,550 square miles. This calculation was made according to the then existing charts, which were discovered afterwards, by the surveys directed by the British Admiralty, to have laid down the east coast, south of Cape Gracios à Dios more than thirty miles too far east. The area, therefore, may be estimated at about 120,000 square miles: nearly equal to that of the United Kingdom. This area includes the Mosquito Territory:

On the north it is bounded by the States of Mexico on the south-eastern by New Granada, on the east by the Atlantic, and on the west by the Pacific.

This extensive region is remarkably irregular in its configuration. Mountains, elevated plains, ravines, lakes, rivers, bays, harbours, lagoons, forests, and low lands, are its predominating features.

There are numerous fertile valleys, and the plateaux or table-lands, which

are, however, but imperfectly known, are described as generally fertile. The mountain elevations rise from 5000 to 13,000 feet above the sea. Many of them if not the whole, are of volcanic formation. The country has been frequently disturbed by earthquakes.

Its soil, its climate, and its productions, are as varied as its configuration. Its lowlands, both on the Atlantic and Pacific coasts, are considered remarkably unhealthy.

Climate.—The whole of Central America is situated between the tropics; but the temperature and salubrity of its climate are as variable as are the diversities of its abrupt elevations, mountains, plateaux, ravines, sands, low districts, lakes, and forests.

It freezes sometimes during the night on the highest part of the table lands, in November, December, and January. At the city of Guatemala, situated in the mean height of the table land (4961 feet above the sea), the dry season begins towards the close of the month of October, and lasts till the end of May: during which time only a few showers occasionally fall. In the beginning of June thunder storms become frequent, and are followed by heavy rains. From six o'clock in the morning till three or four o'clock in the afternoon, the sky is generally without clouds, and the air clear and refreshing. About the middle of October the north winds blow, and the rains cease. The absence of either the windy or rainy seasons is accompanied by thunder; and, it is said, with slight shocks of earthquake. In March and April the thermometer sometimes rises to 86 deg. It generally ranges between 74 deg. and 82 deg. in the middle of the day. In December and January, when the north winds sometimes blow with great force, the thermometer varies between 68 deg. and 72 deg. During the summer heat it rises at about seven o'clock in the morning to between 60 deg. and 67 deg., and in the evening at the same hour, to 67 deg. and 68 deg.; in winter it falls in the morning to 60 deg. and 58 deg., and sometimes even to 56 deg., but in the evening only to between 60 deg. and 64 deg. Towards the end of the dry season the trees shed their leaves, and in many places vegetation appears suspended. The region in which the capital stands, is considered healthy; *goutres* are frequent in the high and mountain districts, especially among the mixed races.

On the sea-coast of the Pacific, the seasons correspond with those of the table lands, but the temperature is much hotter. It is said that the Pacific shores are healthy, although they are almost entirely covered with woods. This salubrity is, however, not without exceptional districts.

The climate of the low eastern coasts is remarkably hot, and the seasons irregular. Below the table land it rains for a longer period than on the western shores,—but the rains are not generally heavy. The rains and hot temperature render the climate in many parts unhealthy.

Population.—The inhabitants of Central America comprise three classes—whites, or creoles of Spanish race, mestizos, or the offspring of whites and Indians, and aboriginal natives. There are but few negroes or Zamboes. In the department of Guatemala the Indian inhabitants are said to constitute the great majority of the people: in Costa Rica those of European race predominate; and in the three other departments the mestizos, mixed with a few mulattoes prevail. Haefkens estimates the whole population at one million and a half, which he distributed as follows, viz.;—of European races, 125,000; mixed races, 500,000; Indians 875,000; total 1,500,000. But it is doubtful whether any approximate estimate can be formed. Many parts, as the inland parts of the Mosquito Territory, the region bounding Yucatan, and part of Honduras, are very little known.

The whites have monopolised nearly all the offices and dignities in the state, except under Carera, the present Indian ruler of the province of Guatemala. The handicraftsmen, shopkeepers, and small tradesmen generally, are chiefly of mixed races. The aborigines are the principal inhabitants of the table-lands.

Minerals.—Gold, silver, and iron mines are worked; lead and mercury have been found. The most important gold and silver mines are those of Costa Rica, at Del Aquacate, and in Honduras, in Mount Merendon, between Chiquimula and the northern shores, and at Del Corpus and Tabanco. The iron mines are situated near Santa Anna, in Salvador 75,000 tons were said to have been produced annually; but these mines are nearly altogether, like most branches of industry, now neglected. This has been the natural consequence of the many revolutions and distractions which have disturbed the peace of the country. In Honduras, jasper and marble are worked. Brimstone is collected near the volcano of Quezaltenango. There are many salt springs, and salt is collected on the banks of some lagoons, as well as on the shore of the Pacific, in such quantities so as to constitute an article of commerce.

Forests.—Dense forests of gigantic trees cover a great part of Central America. Among the most valuable products of these forests are mahogany, pimento, sarsaparilla, vanilla, and the black or Peruvian Balsam; the latter, only found in the district of Salvador, besides other drugs and gums; also the Brazil or Nicaragua wood, and many other beautiful and useful woods.

The low country between the Pacific and the table lands and mountains, varies in breadth from thirty to fifty miles. A forest which covers all the plain, is remarkable for magnificent trees; some of them from thirty to thirty-five feet in circumference, and eighty or ninety feet in height: numerous creepers wind round their trunks to the height of forty or fifty feet. These forests consist chiefly of mahogany, cedar, Brazil, guaiacum, Santa Maria, and other useful woods: vanilla, sarsaparilla, and other medicinal plants abound.

Wild Animals.—The wild animals, reptiles, and birds common to tropical South America are found in Central America. Fish abound in the rivers and lakes, and along the shores of the east and west coasts. Alligators are also numerous in the Usumasinta and numerous rivers.

Lakes.—Exclusive of the Great Lake of Nicaragua, there are many others; chiefly near the Pacific, and there are several lagoons, with sheltered entrances on the shores of the Caribbean Sea. Caratasca Lagoon is forty miles long and more than ten broad. These lagoons are all separated from the sea by narrow and sandy ridges.

Rivers.—The rivers of Central America are numerous; but rapid, and of comparatively inferior magnitude. Those flowing into the Pacific have rarely their sources more than sixty miles from the sea. The Lempa rises on the western extremity of the table-land, and flows from west to east, receiving in its course a river from the Lake of Guixa, and a small stream which passes the town of St. Salvador. The Lempa thence flows south, and rapidly to the Pacific. It is said not to be navigable, and has a bar at its mouth. The Rio Choluteca, which falls into the Bay of Conchagua draining a narrow valley, is next in size to the Lempa.

The Patook flows into the Caribbean Sea, and is said to bring down gold with its stream from the hills. There are rapids called *Los Chiflones*, from which to its mouth the river is said to be navigable for large river barges, and still higher for canoes.

The Rio Tinto flows for about 200 miles, and falls into the sea east of Cape Cameron, but its course is little known.

The Rio Wanks, or Rio de Segovia, rises towards the southern extremity of the table-land, and flows into the sea near Cape Gracios à Dios, but the greater part of its course lies in the plain of Mosquitos. Bluefields River appears to rise on the southern extremity of the table-land, and falls into Mosquito Bay near 12 deg. north latitude.—(See account of the Mosquito Shore.)

Along the high coast, between Cape Cameron and the bottom of the Bay of Honduras, there are several smaller rivers: the Rio de Lean, Rio Ullua, and Chamaeleon, are navigable to some extent for small river barges or piraguas, and the first and last for small schooners.

The river Michatoyat flows from the Lake of Amatitan, and forms at its mouth the harbour of Istapa or Independencia in the Pacific.

The Motagua, the largest river that falls into the Bay of Honduras, rises at the foot of the western slope of the table-land, about 15 deg. north latitude, and flows east, forming numerous rapids and cataracts, as it descends from the highlands. At Gualan, about 100 miles from its mouth, it becomes navigable for flat river boats.

The USUMASINTA is considered the largest river of Central America. Its principal branch, rises in the table-land, not far from the Motagua. After a course of nearly 100 miles it is joined on the right by the Rio de la Pasion, which rises further east, and about seventy miles from the Gulf of Honduras. From this junction the Usumasinta flows about fifty miles more through the table-land, from which it descends by cataracts.

Below the cataracts it is navigable for boats of considerable burden. It falls under the name of Rio Tabasco, into the Bay of Campeachy, where its principal branch forms the port of Victoria. The bar at its mouth is passed over by vessels which sail up to St. Juan Batista. Another branch falls into the Lago de Terminos.

CHAPTER II.

HARBOURS AND TOWNS OF CENTRAL AMERICA.

THIS region has some excellent deep harbours, and several good ones for small vessels.

The *Gulf of Honduras* is situated between the northern Mosquito Shore and the Peninsula of Yucatan. At the bottom of the Gulf is the Bay of Honduras. Motagua and several lesser rivers flow into this bay, which also contains the ports of Omoa and of Yzabal (the latter within the Golfo Dulce). Within this bay are smaller bays, of which that of San Thomas is spacious and deep. The communication from Yucatan or Belize is long and tedious, as vessels have to beat against the trade wind. To obviate this delay, a steamboat should be established to run from Belize to the different ports of Honduras and the Mosquito Territory.

The *Golfo Dulce*, is a lagoon about thirty miles long: The shores are wooded,

The Rio Dulce, which flows from the lagoon into the Bay of Honduras, is about twenty miles in length, including the smaller lagoon, or Golfetta, which is about ten miles long.

SAN JUAN DEL NORTE, in Nicaragua, 11 deg. N. latitude, and 83 deg. 48 min. W. long., situated on the western mouth of the Rio de San Juan, has a good harbour, very little frequented, and with few inhabitants. Hides and some

Indigo are brought down the River San Juan from the country and towns round the Lake of Nicaragua, of which see account of the Harbour and River San Juan, included in the description hereafter of the isthmus of Nicaragua and of Panama.

OMOA is situated on a small bay, forming a good harbour, by which most of the European goods destined for Guatemala and St. Salvador are imported. It is an unhealthy place, and chiefly inhabited by a few mulattoes.

VALLADOLID DE COMAYAGUA, the capital of the state of Honduras, is situated nearly in its centre, between two rivers, in a fine valley, with about 3000 inhabitants. It has the reputation of being an unhealthy place.

TEGUCIGALPA is situated on the high table-land of Honduras, estimated population 8000 to 10,000 inhabitants. In its neighbourhood are mines of gold, silver, copper, and iron.

The harbour of CONCHAGUA, situated on the gulf of the same name, is a safe port. Between the Gulf of Conchagua and the port of Acapulco there is no good harbour on the coast of the Pacific, and trading vessels are obliged to anchor in open roadsteads. The roadstead of Libertad is the place where goods destined for St. Salvador are unladen,—that of Acajutla is the port of Sonzonate.

ST. SALVADOR, of the Federal District, contains above 16,000 inhabitants. They are said to be industrious, and manufacture iron and cotton. It is situated near a stream, between hills. The Federal District lies around the town in a circle, with a radius of about eleven miles, except towards the Pacific, where it extends to the roadstead of Libertad, about twenty-six miles distant. The volcano of St. Salvador is within the Federal District.

ST. VICENTE contains about 8000 inhabitants. In its neighbourhood are plantations of indigo and tobacco, the latter on the declivity of the volcano of St. Vicente.

ST. MIGUEL, said to have a population of 8000 inhabitants, is noted for its fairs, the most important of which is held in the month of November, after the indigo crop—that article being raised in great quantities in its neighbourhood. The town is considered unhealthy.

SACATECOLUCA is situated in the low country which borders the Pacific, with 8000 inhabitants. A considerable quantity of indigo is raised in the neighbourhood.

SONZONATE, situated on the banks of the Rio Grande, about twelve miles from the roadstead of Acajutla, is estimated as having about 10,000 inhabitants, who make and export fancy shell-work. The surrounding country is one of the richest districts of the state of St. Salvador. From the Plaza the streets cross at right angles. The houses are only one story high, but generally large. The best houses are deserted in consequence of anarchy having driven their owners into exile. For the seven superb churches there was lately but one priest. In its neighbourhood sugar is grown for home consumption, and some is also exported to Peru from Acajutla. The volcano of Izalco is in the neighbourhood.

AGUACHAPA has a population estimated at 8000 inhabitants. Sugar is cultivated near it.

SANTA ANNA, estimated population, 10,000 inhabitants. There are plantations of indigo and sugar-canes in the neighbourhood. The best sugar in the country is made here, and in the adjacent mountains iron-mines are worked.

METAPA, near the Lake of Metapa, estimated population 8000 inhabitants. There are iron-mines in the neighbourhood.

MANAGUA, near Lake Managua, has about 13,000 inhabitants, chiefly whites.

MASAYA, a neatly-built town, near the Lake of Nicaragua, is stated to have a population of about 13,000 inhabitants, chiefly Indians, who trade in the produce of the country and other articles.

GRANADA, with about 14,000 inhabitants, is situated on the borders of the Lake of Nicaragua. It is the principal place from which the produce of the country is sent to the harbour, of San Juan del Norte, by the craft which navigate the lake and river.

NICARAGUA, about three miles from the lake, is said to contain from 10,000 to 12,000 inhabitants, and, with the district of St. George, from 20,000 to 22,000. It is situated in a fertile district, where great quantities of cacao are raised.

On the table-land of Nicaragua, is the little town of New Segovia, in the neighbourhood of which excellent tobacco is grown.

COMITAN, the frontier town of Chiapas, contains a population of about ten thousand. The landed proprietors of the surrounding country, as in other parts of Central America, have houses in this town and visit their haciendas occasionally. Comitán is notorious for its smuggling trade. Most of the European goods used in this part of Central America are smuggled in from Belize and Guatemala.

With regard to the population of any of the towns of Central America we consider the foregoing estimates as exceedingly vague.

Although Central America has been traversed and possessed since the year 1513, that is 333 years, by the Spanish-European race, the route from the eastern to the western coast, may be considered as one disgraceful to the most barbarous of nations.

The route from the Golfo Dulce on the east to the city of Guatemala, near the western shores of America, has been passed over for more than two hundred years, yet no road, properly speaking, has been constructed for carriages; and goods, provisions, and not unfrequently travellers, continue to be carried on men's shoulders, or on the backs of animals.

All descriptions that we have read, or heard, of the interior means of communication agree in denouncing the badness, or rather the absence of roads. The journey of Mr. Stephens from the Golfo Dulce fully confirms these statements. He tells us that:—

"At daylight the muleteers commenced loading for the passage of the 'mountain': at seven o'clock the whole caravan, consisting of nearly one hundred mules and twenty or thirty muleteers, was fairly under way. Our immediate party consisted of five mules—two for Mr. Catherwood and myself, one for Augustin, and two for luggage; besides which we had *four Indian carriers*. A padre was carried on the back of an Indian who was relieved when exhausted by another Indian.

"Passing a few straggling houses, which constituted the suburbs of the town, we entered upon a marshy plain sprinkled with shrubs and small trees, and in a few minutes were in an unbroken forest. At every step the mules sank to their fetlocks in mud, and very soon we came to great puddles and mudholes, which reminded me of the breaking up of winter, and the solitary horsepath in one of our primeval forests at home. As we advanced, the shade of the trees became thicker, the holes larger and deeper, and roots rising two or three feet above the ground crossed the path in every direction. I gave the barometer to the muleteer, and had as much as I could do to keep myself in the saddle. All conversation was at an end, and we kept as close as we could to the track of the muleteer; when he descended into a mudhole and crawled out, the entire legs of the mule were blue with mud; we followed, and came out as blue as he.

"The caravan of mules, which had started before us, was but a short distance ahead, and in a little while we heard ringing through the woods the loud shout of the muleteers and the sharp crack of the whip. We overtook them at the bank of a stream which broke rapidly over a stony bed. The whole caravan was moving up the bed of the stream; the water was darkened by the shade of the overhanging trees; the muleteers without shirts, and with their large trousers rolled up to the thighs and down from the waistband, were scattered among the mules: one was chasing a stray beast; a second

darting at one whose load was slipping off; a third lifting up one that had fallen; another, with his foot braced against a mule's side, straining at the girth; all shouting, cursing, and lashing: the whole a mass of inextricable confusion, and presenting a scene almost terrific.

"The ascent began precipitously, and by an extraordinary passage. It was a narrow gully, worn by the tracks of mules and the washing of mountain torrents so deep that the sides were higher than our heads, and so narrow that we could barely pass through without touching. Our whole caravan moved singly through these muddy defiles, the muleteers scattered among them and on the bank above, extricating the mules as they stuck fast, raising them as they fell, arranging their cargoes, cursing, shouting, and lashing them on. If one stopped, all behind were blocked up, unable to turn. Any sudden start pressed us against the sides of the gully, and there was no small danger of getting a leg crushed. Emerging from this defile, we came again among deep mudholes and projecting roots of trees, with the additional difficulty of a steep ascent. The trees, too, were larger, and their roots higher and extending farther; and above all, the mahogany-tree threw out its giant roots, high at the trunk and tapering, not round like the roots of other trees, but straight, with sharp edges, traversing rocks and the roots of other trees.

"For five long hours we were dragged through mudholes, squeezed in gulleys, knocked against trees, and tumbled over roots; every step required care and great physical exertion. We attempted to walk, but the rocks and roots were so slippery, the mudholes so deep, and the ascents and descents so steep, that it was impossible to continue. The mules were only half loaded, and even then several broke down—the lash could not move them, and scarcely one passed over without a fall.

"The descent was as bad as the ascent; and instead of stopping to let the mules breathe, as they had done on ascending, the muleteers seemed anxious to determine in how short a time they could tumble them down the mountain.

"In two hours we reached a wild river or mountain torrent, foaming and breaking over its rocky bed, and shaded by large trees. It was called El Arroyo del Muerto, or Stream of the Dead. With ten hours of the hardest riding I ever went through, we had only made twelve miles."

The great plain over which he travelled, as far as Overo, about forty miles, was densely wooded and uncultivated, the soil rich and capable of maintaining, with little labour, thousands of inhabitants. Passing by Overo the country was more open.

IZTAKA.—The River Michatoyat, whence the *path* first meets the waters of the Pacific, is the outlet of the Lake of Amatitlan, and is said to be navigable from the Falls of San Pedro Martyr, seventy miles from its mouth; but there were no boats upon it, and its banks are still in a wilderness state.

The port Iztaka at the mouth of this river is an open roadstead, without bay, headland, rock, or reef, or any mark whatever to distinguish it from the adjacent shores. "There is no light at night, and vessels at sea take their bearings from the great volcanoes of the Antigua, more than sixty miles inland. A buoy was anchored outside of the breakers, with a cable attached, and under the sheds were three large lanchas for embarking and disembarking the cargoes of the few vessels which resort to this place." At the time of Mr. Stephens' visit, a ship from Bordeaux lay off, more than a mile from the shore. Her boat had some time before landed the supercargo and passengers, since which she had had no communication with the land. Behind the sandbar were a few Indian huts and Indians nearly naked. Generally the sea is, as its name imports, pacific, and the waves roll calmly to the shore; but in the smoothest times there is a breaker, and to pass this, as a part of the fixtures of the port, an anchor is dropped outside with a buoy attached, and a long cable passing from the buoy is secured on the shore.

A Mr. Bridges, an Englishman, from one of the West India Islands, who had been resident in Central America many years, was married to a lady of Leon, and, on account of the disordered state of government, lived on his hacienda, the soil of which was fertile. He informed Mr. Stephens, that fifty men on his grounds *could* manufacture sugar cheaper than two hundred in the West India Islands; but that no reliance could be placed upon Indian labour.

Live Stock.—Cattle in immense herds are reared on the pastures. In the plains of Honduras, and on the eastern districts of Nicaragua, there are cattle farms, on which are herds from 10,000 to 40,000 oxen, bulls, and cows. Horses and mules are bred for riding and for burden; but they are never shod, except a few for riding in the city of Guatemala. Sheep are reared on the upper plains, and swine are reared for the flesh.

MANUFACTURES.

MANUFACTURING industry is in the rudest state in Central America. Ordinary articles are made of leather, cotton, wood, and metals. The wretched condition of the country renders every investment of capital insecure, and considering the fertility of the land for producing raw materials for exportation, it would be unwise to attempt manufacturing articles which can be imported from other countries, at half the cost at which they could be produced in any part of Central America.

On the way to Realejo he visited a *maquina*, or cotton-factory, of which he had heard much on the road. It was the only one in the country, and owed its existence to the enterprise of a countryman, having been erected by a Mr. Higgins, who, disappointed in his efforts, and disgusted with the people, sold it to a Don Francisco and a Mr. Foster. Mr. Stephens says,

"They were sanguine in their expectations of profit; for they supposed, that by furnishing a market, the people would be induced to raise cotton enough for exportation to Europe. The resources of this distracted country are incalculable. Peace and industry would open fountains which would overflow with wealth; and I have no doubt the influence of this single factory will be felt in quieting and enriching the whole district within its reach."

Mr. Stephens has been no prophet in these remarks. If the country were inhabited by people from the United Kingdom, or from Massachusetts, his expectations would have been realised.

TRADE AND NAVIGATION.

Of the trade and navigation of this country, no statistical account can be obtained. Small vessels from the West Indies and the United States, and occasionally from Europe, frequent the coasts, and carry on a trade, chiefly contraband, in consequence of the pernicious system of high duties, which the government of the day, in some mischievous form or other, has attempted to establish. Vessels from the western coasts of America also land various articles. Costa Rica has separated from the other states. Salvador may also be said to act independently. Guatemala is still under the sway of the Indian Carrera. Nicaragua has its separate misrule, and Honduras has published its distinct administration, and customs' laws. The tonnage duties for anchorage are four reals, or about two shillings, per ton for native vessels, and double that amount for foreign vessels. These were the rates established in 1837 for all the other states. Export duties, as well as import, are also attempted to be levied, but at such irregular and changeable rates, that we have not been able to procure cor-

rect data to enable us to give tabular statements or tariff for any of the states of Central America. (See Statistics of the Spanish American Republics hereafter.)

CHAPTER III.

NEW GRANADA.

THE republic of New Granada after its separation from the Confederation which, under the name of Columbia, included Venezuela, Ecuador, and New Granada, comprises the north-western region of South America, and extends from the boundary of Central America to that of the more recently constituted republic of Ecuador. New Granada may, therefore, be considered as extending north from near the equinoctial line, to nearly 12 deg. north latitude, and east to west from about 70 deg. to 83 deg. west longitude. The interior limits, as well as the country, may be considered, as very imperfectly defined.

The area of New Granada is vaguely stated at 380,000 square miles; its greatest length, about 800 miles; the greatest breadth from the Rio Orinoco, between the mouths of the rivers Guaviare and Meta, to the Pacific, at about 600 miles.

On the east it borders on the republic of Venezuela: on the north is the Gulf of Darien and the Caribbean Sea; and near the western limit of the republic, the Laguna de Chiriqui. The not well defined boundary of Central America separates New Granada, or rather Veragua, by a line over the Isthmus of Panama, from the Caribbean Sea, a few miles west of the Laguna de Chiriqui, to Cape Boruca on the Pacific. The latter bounds New Granada south to Ecuador. These diversified regions vary greatly in climate, fertility, and productions.

The region west of the lake of Maracaybo is said to be fertile, with a healthy climate, and either covered with forests, or spreading into prairies and pastures. It is very thinly settled. The páramos of the Andes are extensive table-lands, on the summits of the range, nearly without vegetation; the lower districts are fertile, and the climate favourable to the cultivation of European grain and fruits; in the lower north-western districts, near the basins, all tropical plants thrive, and these districts are comparatively populous. The declivities of the Central Andes are said to be barren. The mountain region east of the Magdalena is arid, the soil rocky, and but little settled or cultivated. It is said to be rich in gold and silver. The lands along the Caribbean Sea are generally described as fertile, the greater part as alluvial, and very unhealthy. Except along the banks of the Rio Magdalena, it is thinly settled. It is generally covered with forest, and produces all tropical plants. The eastern districts of the Isthmus of Panama and Veragua are covered with wood, fertile, unhealthy, and thinly inhabited; to the west of which prairies occur, and the uplands are fertile, more salubrious, and more populous. The region along the Pacific, west of the Andes and south of latitude 5 deg. N., is chiefly covered with dense forests, subject to incessant rains, excessive heat, and an intermitting climate. The mountain region of Los Pastos is in few parts fit for the cultivation of wheat or maize, but affords good pastures. In some of the valleys the grain crops of Europe will grow. The Llanos, north from the Rio Vichada, is similar to, and, in fact, a continuation of, the cattle plains of Caracas and Varinas, and affords pasture to numberless herds of cattle and horses. The southern Llanos are described as covered with forests; or intermingled with extensive

swamps. They are inhabited by native tribes, and are considered very unhealthy.

Rivers.—Several tributaries of the Orinoco are navigable, but they are scarcely ever used. The Meta, and its tributary, the Cazanare, are navigated. The Magdalena, and its tributaries, the Rio Cesare, which flows from the lake of Zapatosá, the Canaverales, the Sogamozo, and the Rio Negro, are navigated. These rivers flow into the Magdalena from the east. The Cauca, and the Atrato and its tributaries, are navigated. The Sinú is navigable as far as Lórica, the Chagres up to Cruces, and the San Juan to Novita. The Rio Patia, for some distance, is navigated; small craft only are used, and even the Magdalena, though called the Danube of New Granada, is said to be interrupted by shallows. We have, however, but a very imperfect knowledge of these rivers, as well as of New Granada generally.

Numerous small and generally deep lakes occur on the slopes of the mountain ridges and on the páramos; large lakes are not numerous in the interior. The Lake of Zapatosá is scarcely known. North of the town of Bogotá, a lake occupies the greater part of a plain about seventy miles long, and more than fifteen wide, but it is shallow, no part being more than six feet deep. The Lake Sebondoy, in the mountain region of Los Pastos, is considered as the source of the Rio Putumayo, an affluent of the Amazonas. Within the shores of the Caribbean Sea there are several lagoons, into which the sea flows. The Lagoon de Santa Marta, by means of which a water communication between Santa Marta and the Rio Magdalena is carried on; and the Ciénega de Tosca, north-east of Cartagena, (more than forty-five miles long), are the largest.

Climate.—The páramos, the elevated table-land of Bogotá, the vales of the Magdalena and Cauca, and low districts along the Caribbean Sea and the Pacific, the mountain regions have each its respective climate, and its variety of productions. European grains, potatoes, are cultivated on the table-land of Bogotá, in the districts north, and along the western declivity of the Eastern Andes. In the basins of the great rivers, and on the low lands along the sea-coast, maize, plantains, many vegetables, and fruits, cotton, cacao, tobacco, and some sugar, are cultivated. The forests yield many useful woods; among others, the brasileto and fustic, from the forests bordering the Sierra de Santa Marta. Ipecacuanha grows on the banks of the Rio Magdalena; cinchona on the Sierra de Santa Marta, the Andes of Merida, Santa Fé, and Popayan; the balsam of Tolu on the banks of the Rio Sinú. The plains of Cazanare pasture immense herds of cattle, which yield supplies of jerked beef and hides. Pearls were formerly fished in the sea opposite the mouth of the Rio Hacha, and a small quantity are still procured in the Bay of Panama.

Minerals.—Gold is found in the Central and Western Andes. In the vale of the Rio Cauca it is procured by washing the sand of rivers and some alluvial soils. In the mountain region of Antioquia it is got by mining; it abounds still more in the countries along the Pacific, and occurs also in the Rio Zulia, and the Rio Hacha. Platinum is found along the Pacific, in the provinces of Chocho and Barbacoas. Silver is discovered less abundantly, and only in a few places in the Central Andes, near the mountain-pass of Quindío, and on the banks of the Rio Sinú. Iron ore and copper ore have been found in several places, especially in the mountains of Antioquia, but they are not worked; tin and lead are also found, emeralds are abundant in a river north of the town of Bogotá, but they are generally small; coal occurs in abundance on the plain of Bogotá, and is also found on the banks of the Rio Sinú. According to Humboldt, a stratum of rock-salt traverses the Eastern Andes, between 5 deg. and 6 deg. north latitude, from south-

west to north-east; it is worked at its extremities, at Zipaquira, on the plain of Bogotá, and at Chita, in the Llanos of Cazanare.

Inhabitants.—The inhabitants of New Granada consist of the descendants of Spaniards, Indians, negroes, and the mixed races. The negroes and Zamboes were formerly numerous in the mining districts of Antioquia and along the Pacific, but both races have been much reduced by the war of independence. At the time of the arrival of the Spaniards, an Indian tribe, the Muyscos, inhabiting the table-land of Bogotá, and the adjacent countries, had attained a considerable degree of civilisation, and their descendants still inhabit the western declivity of the Eastern Andes, and the vale of the Upper Magdalena. The inhabitants of the mountain-region of Los Pastos are described as of Peruvian race. The Indians who have been baptised by the missionaries inhabit the north-eastern part of New Granada, between the Lake of Maracaybo and the town of Cartagena, and also the lower vale of the Cauca. In the upper vale of that river there are few or no Indians. The native tribes along the Pacific, do not appear to have much improved since the arrival of the Spaniards, those of the Isthmus of Panama, we have already described as independent, and in a state of hostility to the Spanish race. The Cattle Plains are mostly peopled by mixed races, especially Mestizoes, and the Wooded Plains are in the possession of native tribes.

Population.—According to a census published in 1827, the whole population amounted to 1,270,000 inhabitants. The number was some time after estimated at 1,260,000 inhabitants, distributed among the five PROVINCES as follows:

PROVINCES.	Area in Square Miles.	Inhabitants.	Inhabitants on a Square Mile.
	number.	number.	number.
Istmo	25,000	100,000	4
Magdalena	50,000	250,000	5
Boyaca	83,000	450,000	5½
Cundinamarca	152,000	370,000	less than 2
Cauca	68,300	190,000	3
Total.....	380,000	1,360,000	

The most populous districts are the central portions of Boyaca and Cundinamarca, and the province of Veragua; the vale of the Rio Magdalena and the upper vale of the Rio Cauca are much less populous. The other parts are thinly inhabited, and with the exception of a few small native tribes, the Wooded Plains contain no inhabitants at all.

SANTA FÉ DE BOGOTÀ, the capital of New Granada, stands on the east side of the spacious and fertile plain of Bogotá, 8958 feet above the sea, and 8280 feet above the surface of the Rio Magdalena at Honda. Behind the city the mountain rises nearly 2000 feet, almost perpendicular, and near the summit are situated the convents of Montserrat and Guadalupe. The town is regularly built, but the houses are low, on account of the frequent earthquakes. The palace of the former viceroys is inhabited by the president of the republic: the senate assembles in a wing of the convent of the Dominicans, and the chamber of representatives in a private residence. The cathedral was a superb edifice, but it was nearly ruined by an earthquake in 1827. The University consists of three colleges, all well situated and built. The population is estimated at between 30,000 and 40,000. This town owes its chief importance to its having been for a long period the seat of government.

Agriculture.—We have very little information as to the agriculture of this state. All that we can place reliance upon will be found hereafter.—(See Statistics of Spanish American Republics.)

Manufactures.—The manufacturing industry of New Granada is limited to the making of coarse woollen and cotton stuffs, which are chiefly made by the lower classes for their own consumption.

Trade.—The maritime commerce of New Granada is far from important, considering the natural resources of this state. A great part of the exportable produce of the most populous districts of the mountainous country of Boyàca, is sent by the Rio Zulia to the harbour of Maracaybo, Venezuela. The produce which is carried down the Magdalena is exported from Santa Marta and Cartagena; vessels of 100 to 120 tons ascend from Citara to Cartagena; in consequence of bad roads, goods are carried on mules and men's backs from the Upper Cauca across the Andes to Porto Buenaventura, on the Pacific.—(See Statistics of the Spanish American Republics hereafter.)

CHAPTER IV.

VENEZUELA.

THE Republic of Venezuela is a vast, fertile and splendid region. Magnificent rivers, luxuriant forests, high mountains, low alluvial districts and islands, and plains, are its most remarkable features. Our information respecting this state is far more satisfactory than that which we have collected respecting most of the other states of South America.*

This state is bounded on the north by the Gulf of Paria and the Caribbean Sea, on the east by British Guayana; on the south, along a not well-defined boundary line, by Brazil; and west by New Granada. The extent of Venezuela south to north, from the boundary of Brazil, in about 1 deg. 50 min. north latitude on the Rio Negro,—to Point Chuspa, in about 10 deg. 25 min. north latitude, is about 630 miles. The greatest extent from east to west from the Caño Cayuno, at the mouth of the Orinoco, in about 60 deg. west longitude, to a point west of Lake Maracaybo, in about 73 deg. west, is estimated at about 840 miles. Its boundaries are very irregular in outline, and its area is vaguely estimated at about 410,000 square miles. This country owes its name to the following circumstance. When the Spaniards discovered this country, they found a great number of Indian villages situated about the lake, built on piles, which was the reason that they gave it the name of Venezuela, after Venezia, or Venice. This name soon extended to all the province; of which Coro became the first capital. The town of Caraccas having been afterwards made the metropolis of all the countries that compose the captain-generalship, its district took the name of the Province of Venezuela; the country surrounding the lake was named the province of Maracaybo; the other three continental provinces were termed Varinas, Guayana, and Cumana. The country known by the name of New Andalusia, as well as the Island of Margarita, formed part of the government of Cumana.

The Island of Trinidad formed at one time a sixth province, or particular government, depending on that of Caraccas, before the English got possession of it in 1797.

Venezuela includes the *Páramos* of Porquera, Merida, Niquitao, and Las

* Our authorities are the reports of British and French consuls and decrees, reports of the Venezuelan government, the work of M. Lavaysse, Alcedo, Robinson, and various official documents.

Rosas, with the snow-clad Nevado de Mucuchies. The elevated part of these páramos rise above the limit of vegetation. The valleys, declivities, and tablelands, are very fertile, and yield, in temperate elevations, the grains and fruits of Europe, and in the lower parts the tropical productions. Parts of Venezuela, west of the Lake of Maracaybo, are covered with wood; and extensive plains without trees extend over other districts. The highlands of Venezuela, west of the Gulf of Triste, are arid from the want of rains. The higher parts are overgrown with the prickly pear, aloes, and dwarf cedar: the valleys, in which naturally valuable timber trees grow, yield, under culture, excellent coffee. The remainder of this high mountain region is fertile, especially in the valleys. About one-half of the low or alluvial grounds of the Orinoco lie within Venezuela. The eastern portion, or the Llanos de Barcelona, or *Llanos Altos*, are scarcely ever inundated by the floods of the Orinoco, with the exception of narrow alluvial tracts along the banks, and the delta of the low district near the Gulf of Paria and the Rio Guarapiche. These low lands are either covered with wood, or occupied by swamps. The more elevated portion of these Llanos are in parts undulated; in others, extensive plains, interspersed with clumps of trees, predominate. The soil is fertile, and adapted for agricultural purposes. On the plains of Caraccas and Varinas, numerous herds of cattle are pastured. These latter plains are inundated for nearly six months in the year, especially those on the lower River Apuré. The great basin of the Rio Orinoco, is bounded by some portions of the Parime Mountains, which spread over Venezuela from the Andes of Bogotá in a northern direction, then east to the coast opposite the north-west part of Trinidad. This region is little known, with the exception of the large fertile valley of the Rio Caroni. The mountain districts are generally covered with forest. South of the upper course of the Orinoco, where it runs from east to west, on both sides of the caño of Cassiquiare and the River Guainia or Rio Negro, there are level, fertile plains, covered with trees,—but owing to the rains and the unhealthiness of the climate, said to be very thinly inhabited.

The population consists of the whites, or descendants of Spaniards, estimated at about 250,000; the Indians, of pure blood, to 150,000; the negroes, who formerly exceeded 60,000 souls, but who have been greatly reduced by the war of independence; and mulattoes, Mestizoes, and Zamboes. The Indian tribes that inhabit the mountains of Venezuela, and those within the valley of Rio Carony, have been visited; and, as asserted, converted by the missionaries, and are now citizens of the republic; but there are said to be many independent tribes—the Guajiros, on the peninsula of the same name; the Cocinas, west of the Lake of Maracaybo; the Guaraons, inhabitants of the Delta of the Orinoco; and some of the tribes which wander over the Parime Mountains and the districts south of the Orinoco. The converted Indians attend to husbandry for their maintenance. M. Depons calculated the population in 1802 at 728,000; but MM. Lavaysse and Humboldt consider this calculation erroneous, and they estimate the population in 1800 at 900,000, of whom 54,000 were slaves.

According to the report of the minister of the interior for 1841, the population is stated to amount to 887,168; but he does not consider this quite exact. The citizens of the United States would people a thoroughly new country of equal extent and riches as Venezuela, with an equal population in less than ten years.

POLITICAL DIVISIONS.—According to the same report, and one of the secretary of finance, in 1846, the republic is divided into thirteen provinces, viz., CARACCAS, which contains about half the population of the whole state; CARABOBO, BARQUISIMETO, TRUJILLO, MERIDA, BARINAS or VARINAS, CORO

MARACAYBO, BARCELONA, GAUYANA, CUMANA, APURE, and MARGARITA. Each of these provinces have governors, or chief administrators, and other functionaries, and each sends *two members to the senate*.

THE GOVERNMENT AND LAWS are lodged in a president and vice-president of the republic; a senate of twenty-six members; a chamber of representatives, at present consisting of fifty-nine members. — (*See Statistics of Venezuela hereafter.*)

CARACCAS, the capital of the republic, and the seat of the legislature and government, is situated in the fruitful valley of Arragon, connected with the vale of the River Tuy, 2822 feet above the sea-level. It is separated from its port, La Guayra, which is about sixteen miles distant, by a mountain ridge, the highest part of which on the road is 5160 feet. In this ridge the Silla de Caraccas rises to a summit 8631 feet high. The town is regularly built on a declivity, and has wide streets; which cross at right angles. The climate is healthy. The cathedral was much damaged in 1826 by an earthquake; and the city suffered greatly from one also in 1812. Caraccas has a university, founded in 1778; about 50,000 inhabitants, about the same number as in 1810, when the province contained 496,772 inhabitants, and carries on a considerable trade in the products of the adjacent fertile valleys. It has an archbishop.

The town of *San Tomé de Angostura*, on the Orinoco, had, in 1807, a population of about 8500 persons, among whom were 300 black slaves. This town is tolerably well built but horridly paved. Though situated in 8 deg. 8 min. north latitude, and not much elevated, it is said to be healthy.

The inconvenient position of Angostura is considered by Lavaysse as one of the principal causes of the languishing state of agriculture and trade in this province:—

“It is necessary that there should be a commercial town nearer to the sea; for the swiftest sailing vessels require fifteen days to sail from the mouths of the river to Angostura. This port becomes worse every day from the sand-banks: there are rocks in that part of the port most convenient for landing merchandise, but these might be easily blown up. The town of Barceloneta, peopled with industrious Catalans, is well placed for becoming a situation of considerable trade.”

Steamboats will, however, obviate all the difficulties and obstacles of the Orinoco. Spanish Guayana is a country almost wild; the only object of cultivation being a little sugar, cotton, indigo, arnotto, and excellent tobacco.

The oxen, horses, and asses, which were originally transported from Europe, increased greatly in this luxuriant region, so that herds of them became wild in the savannahs and forests.

PROVINCE OF MARACAYBO.—The town of Maracaybo, or New Zamora, was, until the beginning of the seventeenth century, the capital of Venezuela.

Maracaybo is tolerably well built of stone: its climate is considered healthy though hot.

ISLAND OF MARGARITA.—The soil of Margarita is arid and unproductive. The pearl fishery attracted numerous adventurers. The Dutch, jealous of its prosperity, burnt and destroyed Pompatar, the principal town, in 1662.

The Island of Margarita has three ports, the most important is that of Pompatar, situated on the south-east coast. It is a capacious and safe basin. There has long been carried on a considerable contraband trade with the English and French colonies, &c., and also with Cumana.

Pueblo de la Mar is an open roadstead, of little trade, situated at a league-and-a-half westward of Pompatar. Pueblo del Norte is a village situated in the northern part of the island: a coral reef renders the entrance to it difficult. Near it is a village inhabited by fishermen.

The valleys of San Juan, Santa Margarita, and Los Robles, have each a village which bears their name. Assoncion is the capital of the island, and the residence of the governor.

The inhabitants of the towns and villages of Venezuela are generally farmers, who cultivate their lands, or keep flocks and herds in the surrounding countries, Priests, physicians, *escrivanos* (lawyers, who are, at the same time, barristers, notaries, attorneys, and even bailiffs), and needy shopkeepers form the remainder of the population. Mountains, forests, and savannas occupy the intervals that separate the district of a town or village from the neighbouring towns or villages, which are generally twenty to thirty miles or more from each other. Occasionally, usually at about twenty-five miles distance, missions or villages of half civilised Indians.

This republic possesses all the resources of prosperity; and we must admit that its people and its government have acted, since their independence of Spain, with more wisdom than any of the Spanish republics, unless Chile form an exception; but the vast natural resources of a region comprising an area of more than three times that of the United Kingdom, and with less than 1,000,000 inhabitants, requires a great population, intelligence, and wisdom, to realise the prosperity and power of which Venezuela is eminently capable.—(See Statistics of Venezuela hereafter.)

CHAPTER V.

GUAYANA.

GUAYANA, or Guiana, comprehended originally the countries which border on the Atlantic Ocean between the mouths of the Amazon and Orinoco, and extending inland to an undefined distance.

FRENCH GUAYANA, or Cayenne, extends from the River Oyapoc, which separates it from Brazil, along the coast as far west as the River Marony, for about 200 miles. Inland to the Sierra Acaray; but as the situation of that range is very imperfectly known, the inland boundary is not determined; consequently, the area of French Guayana is conjectural, when it is computed at about 20,000 square miles. It may be much greater. In 1834 the population consisted of not more than 22,000 individuals, of whom three-fourths were slaves. The aborigines cultivate small patches of ground, but gain their subsistence principally by fishing and hunting.

CAYENNE, the capital, is built on the northern side of the island of that name, and has a population of about 5000 souls. It exports the produce of the country, which in 1834 amounted to somewhat more than 80,000*l*. In the same year forty vessels (4374 tons) entered the harbour, and forty-four vessels (5032 tons) cleared out.—(For an account of its subsequent Trade, see French Colonies' Trade hereafter.)

DUTCH GUAYANA, or Surinam, extends along the sea-coast, between the River Marony on the east and the River Corentyne on the west. All Guayana, English, French, and Dutch, is assumed to extend to the sources of these two rivers, which rise probably in the Sierra Acaray, but scarcely any thing is known of the country south of 4 deg. north lat. The coast-line of Dutch Guayana extends in its windings, about 250 miles; and area of this country is variously estimated at from 38,000 to about 50,000 square miles. Along the sea-coast, to the dis-

tance of eight to fifteen miles inland, the country is flat, and little elevated above the sea. The soil is dry, sandy, and impregnated with salt, yet adapted to the cultivation of cotton. At the back of this low tract the country rises higher, and spreads into savannahs, covered with grass, and here and there with bushes and trees. Along the rivers for from half a mile to two miles the country is, where uncultivated, covered with large trees; this soil is chiefly an alluvial, black fertile mould, and chiefly cultivated as sugar, coffee, tobacco, cotton, and cacao plantations. About forty miles from the shores the country rises to a higher elevation, and the region between the rivers consists of rocky soils chiefly covered with trees. The rivers Marony, Surinam, Saramaca, and Corentyne are navigable to near the foot of the mountains, except where for some little distance some rapids or cataracts occur. The Surinam is navigable for large ships for about thirty miles from its entrance.

POPULATION.—The population consists of whites, negroes, mulattoes, and aboriginal tribes. The whites amount to about 17,000, and the negroes and mixed race to about 66,000. The number of maroons and Indians are unknown. In the mountains, and in some districts further north, there are maroons, or runaway negroes, who formerly used to attack the settlements. The most numerous aboriginal tribes are the Arawak and the Caribs. They live mostly on the produce of the mandioc, plantain, and maize plantations. Among the whites there is a considerable number of Jews, some of whom cultivate plantations in a separate district. In 1808 the English got possession of Surinam, but restored it to the Dutch by the peace of Paris in 1814.

PARAMARIBO, the capital, is situated on the western bank of the River Surinam, eighteen miles from its mouth. It is regularly built in the Dutch style, with wide and straight streets, which are planted with orange trees. The houses in general are two stories high, and built of wood. Near to it, on the northern side, is the fortress of Zelandia, in which the governor resides. The population amounts to about 20,000 souls, three-fifths of which are negroes, or coloured people.

BRITISH GUAYANA, the area of which is estimated at 76,000 square miles, lies between 1 deg. and 8 deg. 40 min. north latitude, and between 57 deg. and 61 deg. west longitude. It has a coast-line of more than 400 miles, running south-east and north-west: extending from the River Corentyne westward to the mouth of the River Orinoco. Neither the western nor southern limits have been defined; and extensive districts are claimed either by Venezuela or by Brazil, and some by both governments.

From the shores of British Guayana shallows, and in parts, muddy banks, extend from five to fifteen miles seaward, they are in parts dry, in others covered with not more than from three to four feet water. They render the approach even in small craft frequently impracticable, and extend in shoals at the mouths of the rivers. The shores are low, and on a level with the sea at high water. The soil is chiefly an alluvium of blue clay, impregnated with marine and vegetable matter. When these soils are drained and cultivated, they sink about a foot below the level of the sea; and require careful attention to the embankments and sluices. This fertile soil extends from two to eight miles inland. At the back of many of the settlements are swamps, of blackish vegetable matter: sometimes six or eight feet deep. Between the River Corentyne and the Demerara the low land of the coast is generally in the front of savannahs, intersected by fertile, and generally well wooded tracts along the streams.

A range of sandy hills, from thirty to 120 feet above the level plain, crosses the country from south-east to north-west. An elevated mountain range separates

the streams of the Carony, a tributary of the Orinoco, from those of the Mazarony, a branch of the Essequibo.

The explorations of Mr. Schomburgk, in order to make boundary surveys through the interior since 1837, have unfolded to us magnificent regions of rivers, mountains, plains, and forests of gigantic trees, during his last expedition. He completed the circuit of the colony from its sea boundary to within forty-two miles of the equator in the space of nearly three years.

Live Stock.—The domestic animals are horses, mules, hogs, goats, and fowls. The rearing of black cattle is neglected; as they are more cheaply imported from the Orinoco districts of Venezuela; butter and cheese are also great articles of import; but herds of black cattle and horses graze on the savannahs near the Pacaraima Mountains.

Inhabitants.—The population of British Guayana is composed of aboriginal tribes and of foreign settlers: Dutch, English, Europeans, Africans, a number of Coolies, and the descendants of Europeans and officers.

By the census of the united colonies of Demerara and Essequibo, taken in 1829, the population consisted of 3006 whites, 6360 free coloured people, and 69,368 slaves. By the last census of the population of Berbice, taken in 1833, there were 570 whites, 1661 free coloured people, and 19,320 slaves. It is estimated that at present the whole population consists of 82,824 negroes, 8076 people of mixed race, and 4000 whites, to which the number of emigrants, since 1829 is to be added, which amounts to about 3100 individuals. The emigrants are partly whites from England and Malta, and partly Coolies.

British Guayana, as now constituted, consists of Demerara, Essequibo, and Berbice. The settlements consist of plantations along the sea-coast and extending up the rivers. Some few are found on the banks of the rivers a considerable distance from the sea, chiefly for cutting timber.—(See the Statistics of the British American Possessions hereafter.)

GEORGETOWN, formerly called Stabroek, the capital, is built on the east bank of the River Demerara, which is here nearly a mile wide. The harbour, formed by the mouth of the river is safe, but not of easy access, as a bar of mud extends four miles out to sea, over which no vessel, drawing more than nine feet, can pass until half-flood; the channel along the eastern shore has nineteen feet depth at high water. The streets of the town are wide and traversed by canals; the houses are of wood, and seldom above two stories high; they are generally surrounded by a garden, or trees, and separated from each other by canals or trenches. The public building, which comprises all the public offices, is a large edifice. There are churches for the principal denominations of Christians, and public schools. The population is estimated at more than 20,000 souls, of which 16,000 are coloured people.

NEW AMSTERDAM, on the Berbice, extends about a mile and a half along the river, and is intersected by canals. The harbour is good, but intricate in its access. In 1833 the population amounted to 2900 persons. It exports the produce of plantations on the rivers Berbice and Corentyne.

CHAPTER VI.

REPUBLIC OF ECUADOR.

ECUADOR extends from about 1 deg. 40 min. north latitude, to 5 deg. 50 min. south latitude, along the Pacific from the River Mira, south to the Rio Tumbez, for

about 510 miles; and from some point not well defined between 69 deg. or nearly 70 deg. west, to 81 deg. 20 min. west longitude, or about 830 miles. Its boundary lines are very irregularly and very indistinctly defined, except on the Pacific, where it embraces the Gulf of Guayaquil, and several bays, headlands, and some roadsteads and seaports. This state claims as its boundary on the south with Peru, the River Tumbez up to its source in the Andes, and thence south-easterly along these mountains to the Rio Chinchupe, following the latter to its junction with the Rio Amazon south of San Juan de Bracamoros; Ecuador has from thence a boundary between it and Bolivia, or Upper Peru, the Rio Amazon, as far as its boundary of Brazil, from which it is separated by a line beginning on the south side of the Amazon, from in about 69 deg. west longitude, and thence northward to the Rio Negro, which forms the separation on the north, between Ecuador and New Granada, and west from the Rio Negro to the Rio Mira until the latter flows into the Pacific.

The equatorial Andes, the hilly country between those mountains and the Pacific, and the great plateaux between the mountain range on the east boundary of Brazil are comprised within the republic of Ecuador, the area of which is vaguely estimated at about 320,000 square miles. These magnificent regions comprise every variety of configuration and scenery. Wooded declivities, rocky and naked precipices, great rivers, mountain torrents, elevated plains; with a soil and climate producing under the equator, the grains and fruits of Europe, while the lower plains yield the cane and tropical plants, and the elevated declivities afford extensive pasture. The valleys of the Rio Guayaquil and Dailli have plantations of cacao, and various other crops are or may be cultivated. The remainder of this region is less cultivated. Savannahs occur in some extensive districts and others are covered with lofty trees. In the regions from whence the rivers Guainia and Uaupes flow, mountains rising to moderate elevations prevail, and the country is chiefly wooded; savannahs occur also near the foot of the Andes. Heavy rain, lakes, and stagnant pools, render many parts of Ecuador unhealthy.

The Amazon is descended on rafts or balsas from the mouth of the Rio Chunchunga; it becomes navigable for vessels below the Pongo of Manseriche, at St. Borja, for which vessels not drawing more than six or seven feet of water may ascend: large vessels ascend as far as the mouth of the Rio Tigre. The tributaries of the Amazon which drain the plains, are navigable, some in a greater, others to a lesser extent. These are chiefly the Rio Santiago, which falls above the Pongo de Manseriche, the Marona, the Pastaza, the Tigre, the Napo, the Putumayo, the Yapurá. The Napo is as yet the only affluent much navigated. The navigation of the Yapurá is said to be obstructed by a cataract. The Guainia and its affluent the Uaupes, rise within Ecuador; but these rivers are but little known. The Rio Guayaquil, the Rio Baba, and the Rio Daüli, by which produce is brought down to the port of Guayaquil, the Rio Esmeraldas, the Rio Santiago, and the Rio Mira, are all to some extent navigable.

In the western region of Ecuador, Indian corn, plantains, yams, cacao, tobacco, sugar, cotton, and different kinds of tropical fruit and vegetables are cultivated. From the elevated valleys and plains of the mountain-region wheat is sent down to Guayaquil and other low districts. Towards the southern extremity of the Andes there are extensive forests; the cinchona bark-tree is common. The Great Plains yield wax, gum, resin, and sarsaparilla. In the mountain-region and plains, cattle in large herds, horses, mules, and sheep are pastured. Turtles are abundant in the Amazon; their fat, under the name of *manteca*, constitutes an important article of traffic on the banks of that river. The fish called *manta* abounds on the shores of the Pacific. It is salted

and sent to Guayaquil and the mountain-region for sale. Pearls were formerly fished. Some cochineal is collected near Loxa. Vessels are built at Guayaquil of the timber yielded by the western forests.

Gold is found in some of the rivers, silver ore occurs, but neither in any great quantity. Lead ore and quicksilver are found in some places. At Lo-Azoges quicksilver is worked. Salt is made along the coast at Cape Santa Helena, where it constitutes an article of trade for internal consumption.

Inhabitants.—The population consists of the descendants of the Spaniards, and of Indians, and Mestizoes. The number of negroes has always been very small in Ecuador. The whites are most numerous in the valleys of the Andes, and in those of the rivers Guayaquil and Daüli, but in no part do they constitute more than one-fourth of the whole population. In the western region and in the mountains, the aborigines are of the Peruvian race, and speak the Quichua language. They are agriculturists, and employ themselves also in weaving coarse woollen and cotton stuffs. Along the coast many Indian families live by fishing and making salt. The Indians who inhabit the Great Plains, gain their subsistence almost exclusively by hunting and fishing on the banks of the tributary of the Amazon: they cultivate small pieces of ground. Abundance of sulphur may be procured at Tescan, near Chimborazo.

According to the census of 1827, the population of Ecuador amounted to about 492,000, exclusive of the Indians of the eastern plains.

ESTIMATED population of Ecuador.

DEPARTMENT.	Area in Square Miles.	Inhabitants.	Inhabitants to a Square Mile.
	number.	number.	number.
Chimborazo, or Ecuador.....	100,000	100,000	1
Guayaquil.....	25,000	150,000	nearly 5
Asuay.....	105,070	210,000	2
Total	320,000	550,000	

Along the coast of the Pacific there are no large towns. Coasters find shelter in the harbours of Tumaco, Tola, Esmeraldas, Atacámes, and Canoa; these places have no foreign trade. The Missionos of Baeza, Archidonia, and Avila, east of the Andes, are now said to be deserted, although formerly described as very populous. Santa Rosa de Oas, situated upon the Rio Napo, where that river begins to be navigable; has a small population.

CHAPTER VII.

PERU.

GENERAL SKETCHES OF THE SOIL AND CLIMATE.

THE limits of the present republic of Peru extend from the mouth of the River Loa, (21 deg. 28 min. south latitude) to the entrance of the Tumbes in 3 deg. 30 min. 40 sec. south latitude. Its extreme length along the shores of the Pacific is estimated at nearly 1700 miles. The greatest breadth is estimated at more than 1000 miles.

It is bounded by Ecuador on the north, on the west by the Pacific, on the

south and south-east by Bolivia, on the east by Brazil. The southern and south-eastern boundaries are not, however, well decided.

Peru extends from the western declivity of the Bolivian and Peruvian Andes to the shores of the Pacific. This region is called the *Valles*. East of the *Valles* the *Montaña*, or mountain-region, comprehends the Peruvian Andes. Along the eastern side of the *Montaña* is the great upper plain of the Amazon.

The region of the *VALLES* has little or no wood, and includes but small districts fit for culture. Sandy or stony deserts prevail. In the mountain region, a large portion is rocky; the numerous valleys which intersect the mountains from south to north are generally fertile, especially the valley of the Rio Jauja. The eastern mountain region is covered with forests and other vegetable growth; the western mountains are nearly bare, and frequently without any vegetation. The eastern plains are cultivated only in small spots by the native tribes, who grow roots and maize; the greater part of these places are covered with forests. Savannas of considerable extent occupy parts of these plains, but these regions are but imperfectly known to us.

The whole sea-coast region of Peru is by all described as sandy, arid, bare, and scorched. The sea-coasts of the state of Ecuador are, on the contrary, described as well-wooded plains and villages.

Peru is traversed by two parallel chains of high mountains, called indifferently the Andes and the Cordilleras. Geographers may, to avoid confusion, give the name of Andes to the eastern, and Cordilleras to the western, chain. The western range follows the shores of the Pacific at a distance of sixty or seventy English miles. It is remarkable that all the streams flowing from its eastern slopes find their way through the chain of the Andes to the Atlantic. In all South America there is no exception to this rule. In no instance do the Cordilleras afford passage to any stream flowing from the Andes,—yet the former chain is lower than the latter, at least in Peru and Bolivia. The region between the Andes and the Cordilleras, comprising a vast *plateau*, or rather many table-lands, about 12,000 feet above the level of the sea. This *plateau* is scarcely inhabited. The whole region is called by the natives *Puna*, in Spanish *despoblado*. The general aspect of this plain is monotonous and dreary, the surface is principally covered with faded dull grasses; now and then a solitary stunted tree of the *quenua*, tracts covered with the reddish brown stalks of the *ratana*, which the few inhabitants use for fuel, or for roofing their huts. But here are found the llama, the alpaca, the huanacu, and the vicuna. Cold winds sweep from the frozen Cordillera over the plain, regularly accompanied for four months with daily violent snow-storms.

Rivers.—The small rivers that flow into the Pacific are chiefly used for irrigating lands; none of them are navigable, except the Rio de Piura, for some months, about twenty miles, as far as the town of Piura. Many of the rivers are dried up for several months of the year; a few flow to the Pauba, the others to the eastern waters. The mountain rocks have some streams which might supply irrigation, and even the most arid districts yield luxuriantly when watered.

The *Montaña* is drained by the Marañon, and its affluents the Huallaga and Ucayali. The Marañon is navigable from the mouth of the Rio Chuchunga downwards. No obstacle to navigation occurs below the Pongo for vessels drawing no more than six to seven feet of water, as far up as the junction of the Ucayali it may be, ascended by larger vessels.

The inhabitants are Creoles, or other descendants of Spaniards, Mestizoes, and a few negroes and mulattoes, but chiefly the descendants of the ancient Peruvians. The descendants of the Peruvians are tolerably industrious agri-

culturists, manufacturers, and fishermen. The coasting trade in the balsas is also carried on by them. They speak the quichua or language of the Incas. The tribes that inhabit the plains live chiefly amid the forests, and along the rivers.

Estimated number of inhabitants—230,819 whites; 848,846 Peruvians; 323,782 Mestizoes; 64,878 mulattoes; and 31,628 slaves: total, 1,499,953.—Distributed as follows in the departments.

But this and all other estimates of the population we consider vaguely calculated, though probably as near an approximation to the number as can be obtained, without taking a regular and correct census.

CHAPTER VIII.

AGRICULTURE AND LIVE STOCK.

THE temperate climate of the *Valles* admits of the growth of European grain, maize, and rice; the grasses and fruit trees of Europe succeed; sugar, wine, and distilled brandy constitute articles for home use and for export. In the elevated districts of Montana the cerealia and fruits of Europe are grown, and the valleys produce tropical products: the forests on the eastern declivity of the Andes, yield cinchona bark, copaiva balsam, copal, wax, yellow and black; indigo grows spontaneously. The Indians of the plains collect from the forests vanilla, sarsaparilla, copaiva, copal, caoutchouc, and several gums and resins for export.

Live Stock.—Cattle, mules, and horses are reared, chiefly on the extensive pasture grounds along mountain slopes. On the elevated ranges and table-lands of Titicaca and Pasco, llamas are used as beasts of burden; and each carry about seventy pounds. Sheep are pastured in the colder districts.

Agriculture is not only in a rude state, but it would rather appear to deteriorate than improve since the Peruvian independence of Spanish domination. The valley of—Huanuco, is one of the most productive maize districts. It also produces wheat, beans, and other vegetables and grasses. This valley and the plains of Lagamarca, and other rather elevated districts are subject to frosts which occasionally injure the crops; although the wheat crops, considering the mode of culture, are generally good. Sugar is produced at Huylas, Huanuco, and other places.

The agriculture of Huanuco, though alluring to the eye, which only views its rich and waving fields enclosed with fences of mud, and hedges of the Indian fig, and aloe or maguey plants, is in every way defective as a branch of industry.

Lucern or alfalfa is daily cut down, and used green to feed the numerous cattle and the oxen for the plough and sugar-mills. The scythe is not used. The grass is cut with a sickle. The cattle are fed on irrigated pastures during day, but at night with cut grass in corrals or pens.

Potato-ground is broken up on the face of steeps with deep narrow spades, with long handles. In the same manner the soil is turned up by those who have neither plough nor oxen, for maize on the temperate flats on the hill-sides, and in the thickets near mountain streams, where the soil is usually fertile, and materials for enclosing abound. Holes are made in the ground with a sharp-pointed stick, where the seed is dropped secure from birds, and when planted in virgin soil, it

yields a luxuriant harvest. The white-grained maize is sown in preference to the yellow (*morocho*), as it makes, when toasted, the best "*cancha*," which the poor Indian uses instead of bread; when boiled it makes the sweetest "*mote*," or maize simply boiled; it is also said to yield the most agreeably-tasted *chica*, or beer, which the Peruvians brew in their huts, whenever they have a little surplus maize. They also make a kind of beer from the fermented juice of the maize-stalks which they press between small wooden rollers. Cattle are also fed on dry maize-leaves and stubble, which are considered more nutritious than either lucern or the tops of the sugar-cane.

Aji, or *pimiento*, is generally cultivated around the Indian dwellings and gardens in the warm valleys, and with it they season nearly all kinds of food.

The sugar-mills in the valley of Huanuco are, the greater number of them, made of wood, and moved by oxen. On the larger estates brass rollers are used.

A staple article, supplied by Huanuco to Cerro Pasco, is the *coca-leaf*, from the Montana, distant about fifteen leagues from the city. The indigo growers in the contiguous Montana have nearly forsaken its cultivation from want of funds or enterprise.

Much of the fruit of the Huanuco orchards is eaten at the tables of the inhabitants of Cerro; and in the convents are made excellent sweetmeats, highly valued, in the surrounding country, as presents rather than as articles of commerce.

Several lands formerly belonging to convents were, after the revolution, appropriated as endowments of the college of Huanuco.

The Montana regions, which are watered by the Huallaga, Ucayali, Maranon, and their numerous tributaries, are but very imperfectly explored. They combine the most fertile but uncultivated soils in the valleys.

From May to November the sun shines powerfully in the Montana, and consequently the soil, where it is cleared of wood—as in the valley of Chinchao—becomes so dry that its surface cracks and opens for some depth, but underneath it retains its humidity, and requires no irrigation. From November to May it rains sometimes for six or seven days without intermission.

In the rivers of Peru alligators, tortoises, and a variety of fish abound. The manatee, sometimes called *peixe-buey*,* feeds among the grass on the banks of the rivers.

The forest productions of the Montana, considered as articles of commerce or usefulness, are chiefly, cedar, and chonta or ebony, mahogany, walnut, and almond-tree. Edible herbs and roots, except the potato and yuca, are little cultivated; but coffee, plantains, and sugar-cane, of which a variety called the blue or azul grows luxuriantly. The sugar-cane comes to maturity earlier than in other parts of Peru, and yields an annual crop at a very low cost of production.

The fertile valley of Chinchao is renowned for its *coca* plantations. Some farms in Huanuco cultivate frijoles, or beans, for the use of the coca-gatherers: rice is also grown along the low rich banks of the great rivers, and maize is cultivated, wherever it will ripen as a necessary of life.

In the Montana, and in other parts of Peru, *chicha*† is made from maize, but the natives here make a drink called *másata*, not known in more civilised parts of the country, produced by chewing the yuca or maize,† &c., and then leaving it to ferment, when, according to the quantity of water added to it, the fermented juice will be found of greater or less intoxicating power.

* From *peixe*, fish: *buey*, ox.

† See account of this liquor, and how made, in the description of the Mosquito Territory

Indigo and tobacco is of Montana growth.

Cotton grows almost naturally, and requires no artificial assistance for its luxuriant growth. It is spun and wove into cloths of various texture by the Indians. Lemons, limes, oranges, citrons, and other cooling fruit, are also productions of those parts.

The pine-apple is very abundant, as well as of delicious flavour, though it grows wild: and among the articles of spontaneous growth in the Montana, contiguous to Huanuco, we may enumerate cacao or cocoa, cinnamon, guaiacum, vanilla, black wax, storax, dragons' blood, Maria oil, gum grana, balsam of copaiba, copal, and many other gums, balsams, and resins. Cinchona and sarsaparilla abound in great quantity.

Milk, among the pastoral huts of the high grazing country, is used for making cheese, it is not often drank as an article of nutriment, save by those who live in small round booths. These pastoral huts are scattered over the distant plains and ranges of the mountains, throughout the "*estancias*," on the hilly pasture-lands, for feeding cattle and sheep.

The poor Inca, who owns a few horned cattle, will endure hunger rather than kill for food one of his herd. He who owns sheep, however, kills one occasionally for the meat and "*caldo*,"—*mutton tea*: vegetables being scarce, to make *chupe*, a kind of broth used by the corn-growers. The inhabitants of the snowy region, or elevated valleys of the Andes, are distinguished by their warm clothing, broad chests, and fresh complexions. They descend from the high cold district to the temperate and corn-growing country, to barter for vegetable productions, fresh mutton, skinned and free from offal, which they carry on the back of asses. Mutton, like beef, is dried in the sun, and stored for use by the inhabitants of the warm districts. This dried meat is called by them "*charque*," and by the English jerked beef.

When the inhabitants of Tarma have sown their fields, they usually spend, according to Dr. Smith, an entire month in visiting and festivity:—

"And they say of their neighbours of Jauja (eight leagues to the south of them), whose rejoicing is at harvest-home, that they distrust Providence, while they themselves piously rejoice and rest their hope in the Giver of their harvest; hence, they infer the wheat crops of the Jaujinos (whose granaries are in favourable years the most plentifully stored in all Peru) are often blighted and frosted, while the Tarmenian barley always flourishes."

The pine-apples and coffee of the Montana and hacienda of Vitoc, near Tarma, are very good.

The centre land of Peru is watered by streams and mountain torrents. They are subject, often suddenly, to rise and inundate the low grounds.

The food of the poor, as well as of the rich, constitutes an index to the eatable products of a country, and one may, therefore, include some observation on this head in concluding our sketches of Peruvian agriculture; which may be considered to apply, in many respects, to all the countries of Western South America, between Panama and Chile.

A common dish of food on the Sierra consists of potatoes, sliced and boiled in water or milk, with an addition of eggs, cheese, and sometimes butter: but this nutritious dish is often represented by *yuco-chupe*, or water *chupe*, consisting of potatoes sliced and boiled in water, with the addition of a little salt, and a leaf of wild mint, as an antidote against flatulency.

In Lima the articles of diet are far more varied than in the country districts. Maize is far more generally cultivated than any other grain. Wheat is chiefly imported from Chile and other foreign states. The food of the poor on the sea-

coast is cooked camote and yuca roots : both are very nutritive and wholesome. In Lima animal food is even profusely consumed, and poultry in incredible quantities. It is the food of the sick, infirm, and convalescent, who constitute a numerous portion of the inhabitants of the capital, all of whom have chicken or chicken soup at least once a day. Geese and ducks are of low repute for eating, pigeons and turkeys are abundant in the daily market. Fish is usually good and abundant; the fishermen of the coast are described as the most robust of Peruvian natives.

The number of fat pigs killed is estimated considerably above twenty thousand yearly. The consumption of lard and fried pork (*chicharones*) is consequently great. Dr. Smith says the "mantequero," or lard and swine-dealer, is, after that of the baker and *lottery-man* (*suertero*), one of the most lucrative in the capital. From forty to fifty head of oxen, and from three to four hundred sheep, are slaughtered daily for the Lima market: the beef is good; the mutton of inferior quality.

Most of the other Limenian dishes are soddened in lard, excepting the common fowl, the pigeon, turkey, and a dish called the "puchero," consisting of a variety of fruit and vegetables, with pieces of meat of different kinds boiled together and served up in a great dish or plate.

The soups and vegetable dishes are strongly seasoned with *agi* or Chile pepper.

The native dark races are said by Dr. Smith to be much more robust in form, and hardier in constitution than strangers to the climate.

The Peruvians of the coast are not supplied with fruits. The fruits produced in the orchards in and about Lima are as follow, according to a list by Mr. Mathews, an English botanist, viz.,

"*January*.—Grapes begin to ripen; and also apricots, and a few pears.

"*February*.—Grapes, pears in abundance, apricots; peaches begin to ripen; lucumas scarce; figs.

"*March*.—Grapes in abundance; pears scarce; peaches in abundance; apples begin to ripen; lucumas in abundance; figs in abundance.

"*April*.—Apples in abundance; quinces, *cerucla de frayle* (*spondias dulcis*), and cerasas (*malpighia glandulosa*), patillas (*psidium lineatum*), and guavas; figs scarce.

"*May*.—The same as April; a few grapes are seen in the market, brought from the southward; cherimollas.

"*June*.—Cherimollas and guanavanas; sweet and sour oranges; a few apples.

"*July*.—The same as June, with the exception of apples and limes; sweet lemons and sour lemons begin to ripen.

"*August*.—The same as July; but slight demand for oranges this month.

"*September*.—Lucumas, paltas, and the fruits of the previous month.

"*October*.—Same as September; but a great demand for limes and sweet lemons.

"*November and December*.—During these two months there is a great demand for sweet and sour lemons, for *frescos*, or cooling drinks. Sweet oranges rarely remain good after the middle of November."

Plantains are fit for food all the year, but are most abundant during the hot months. The pepino is much eaten during December, January, and February. In the months of April and May, the pulp surrounding the seeds in the pod of the pacay are much eaten.

In addition to the above, the melon, and sandia, or musk and water melon, are cultivated in the neighbourhood of Lima, and are to be seen for sale in large heaps at the corners of the streets. They are consumed with avidity in the hot month of February. Very good olives grow in the Valley of the Rimac, and ripen in February and March. Strawberries and "tunas," or Indian figs, of in-

ferior quality, grow in Lima; but the market is supplied with these fruits, and of the best quality, from the neighbouring valley of Santa Ulaya. The pine-apple does not ripen spontaneously in Lima. Those eaten in this city grow on the eastern side of Peru, and occasionally are brought from Moro.

CHAPTER IX.

MANUFACTURES, GOVERNMENT, ETC.

THE Spanish system, which limited supply, forced the inhabitants of Peru to make some indispensable articles. Coarse cotton and woollen stuffs worn by the aborigines and by the Mestizoes, are either made by themselves, or in the valleys of the Marañon, Jauja, and at Cuzc6. Iron utensils are made at Caxamarca. At Lima, Arequipa, and Cuzc6, gold and silver vessels, utensils, trinkets, and ornaments, are made.* None of these are exported. Coarse cotton cloth, called tucuya, made in Moyobamba and Tarapoto, is exported to those parts of Brazil adjacent to the Amazon.

Trade.—The internal trade is obstructed, or rendered difficult, by the want of roads. Since the independence of Peru, a trade has been opened from the eastern districts, with the Brazilian districts adjacent to the Rio Amazon. This trade was chiefly from the valley of the Rio Huallaga, and consists mostly of cotton, gums, resins, wax, sarsaparilla, and tucuya. The maritime commerce of Peru is chiefly with the western coasts, and other republics of America, with Mexico, Central America, Guayaquil, and Chile, to which countries sugar, wine, brandy, salt, and some other articles of minor value are exported. Gold and silver, and the saltpetre of Iquique, Arica, and Arequipa, are exported. Cinchilla fur, vicuna and sheep-wool, and cinchona bark, are the principal articles exported to Europe.—(For the Foreign Trade and Navigation of Peru, see Statistics of the Spanish Republics hereafter.)

Government.—The constitution of Peru was framed in 1828. It was to be based on that of the United States. But it will be seen that it has, like that of all the Spanish American republics, in administrative practice, retained most of what existed under Spain, with a strong tendency towards the centralised system of the police of France. The legislative body consists of a senate and a chamber of deputies, the members of which are chosen by the people.† The executive is

* "In Tarma, they make *ponchos*, or loose cloaks, of great beauty and fineness; and, on the colder table-lands, warm but coarse blankets and ponchos, &c., are still made by the Indians. In the valleys, goat-skins are made into cordovans; cow-hide is made into saddle-bags, and almofrezes, or travelling-cases for bed and bedding; mats, too, are manufactured from rushes, and are very generally used as carpeting, under the name of *esteras*. But the work of silversmiths is generally in a rude state, even in Pasco; for the fine filigree work, for which inland Peru is celebrated, is made, not in the department of Junin, but at Huamanga, in the department of Ayacucho—where the natives have also shown a decided talent for sculpture, though their works cannot be said to exhibit, as yet, much elegance or expression."—*Smith's Peru*.

† "The chamber of deputies is composed of representatives elected by the electoral colleges of provinces and parishes. The parochial electoral colleges are composed of all the citizens resident in the parish, congregated according to law. For every 200 individuals in a parish an elector is nominated; and in every village whose numbers entitle them to name an elector, or have a parochial college, a municipal body is established with a right to superintend its own local interests, consistently with the laws and public good—and subject to the approbation of the departmental juntas. The electoral colleges of provinces are composed of parochial electors constituted accord-

vested in the president, who likewise is chosen by the people for four years, and is assisted by a ministry, chosen by himself, and a council of state chosen by the legislature. The departments have the power of regulating their public and ecclesiastical affairs, without the interference of the general government,—to hold their departmental juntas, and to frame laws for their local territories; these laws require to be afterwards sanctioned by the *central legislature* to become law.

Departments.—The supreme political government of every *department* is vested in a prefect, under immediate *central* subordination to the president of the republic; that of every *province* answers to an *arrondissement* in France, and is intrusted to a *sub-prefect*, who is immediately subordinate to the prefect; that of the *districts* (say *Canton*) to a governor (*juge-de-paix*), who acknowledges the sub-prefect as his superior; and in every town, or Indian village (say *commune*), there is a still humbler officer called *alcalde* (say mayor), who acts under the orders of the governor, or *juge-de-paix*, of his district, and is intrusted with the ordinary routine of local police.

CHAPTER X.

THE CITY OF LIMA.

WE shall conclude our description of the country which once formed the chief territory of the empire of the Incas, by a brief description, according to the best authorities, of the celebrated city of Lima.

LIMA, the capital of the republic, stands in a beautiful valley, six miles from the sea, and 560 feet above its surface; the small River Rimac flows through it. The houses are tolerably built of adobes, or sun-dried bricks, canes, and wood; they are low, in order to stand the shocks of earthquakes, being seldom above two stories, with small balconies to the second floor, with generally an archway from the street, and with a strong door leading to a court within. The lower or ground floor is commonly used as store-rooms and stables, and all kinds of rubbish are stowed away on the tops. The staircase is generally spacious and handsome, and the apartments of the lodgers often adorned with common fresco paintings. For the climate these houses are, however, sufficiently well adapted. The cathedral, the palaces of government and of the archbishop, the university, and several colleges, and some churches are the most remarkable edifices. The population is estimated at about 70,000. There are several unimportant manufactures carried on,—and its trade in foreign merchandise, and its exports of the produce of the mines, and of the interior, are through the nearly adjacent port of Callao.

The portales, or arcades, form the most attractive parts of Lima. At nearly all hours they are the most lively resort. They are built on two sides of the plaza. The ground-floor is occupied as shops, in which various goods and fancy articles are sold. Between the columns, next the plaza, sit lace and fringe workers; and before them are cooks, fresco-sellers, and others. Frying cakes, and fish, in the morning and late in the evening, seems to be one of the most brisk employments, the demand being remarkable.

ing to law, and they elect deputies to congress in the proportion of one for every 20,000 inhabitants, or for a fractional number which exceeds 10,000. But the province in which the whole population does not come up to 10,000 inhabitants, will nevertheless name a deputy."—*Smith's Peru*.

The arcades are about five hundred feet long, paved with small stones, interlaid with the knuckle-bones of sheep, which produces a kind of mosaic pavement, in which is wrought the date of its foundation, 1799. This place for many hours, of the day is the great resort of the populace.

The palace, formerly that of the viceroy, occupies the north side of the plaza. The lower part of it is now converted into a row of small shops, principally tinkers and small-ware dealers. On the east-side is the archbishop's palace and the cathedral.

The fountain in the centre of the plaza, of which much has been said, was erected in 1600, by Don Garcia Sarmiento Sotomayer, the then viceroy and captain-general of the kingdom. "El que bebe de la pila sequenda in Lima," is the usual saying. "He that drinks of the fountain will not leave Lima."

The cathedral is a stately, large edifice; most of its decorations are in bad taste. Formerly it was celebrated for riches in precious metals and stones.

The market of Lima, kept in an open square, is well supplied. There are no stalls: mats are used in their stead. The meat is spread in rows, and the vegetables heaped up in piles. The meat is cut with the grain, and into small pieces, to suit the purchasers; and poultry is cut up in a similar manner. The cooking establishments are in great request; stews, fries, and olla podridas, are in constant preparation.

Captain Wilkes says,—

"There does not appear to exist any accurate account of the population of Peru; but it is generally believed to have decreased, particularly as regards the whites and negroes. The best information gives but little over 1,000,000 inhabitants, viz., about 125,000 whites; natives and *cholos*, 800,000; with 90,000 negroes and ranchos, of whom about 35,000 are slaves. This does not vary much from the number given by the geographies forty years ago. The country appears, from all accounts, not only to have decreased in population, but to have diminished in wealth and productiveness. A much less proportion of the soil is now cultivated than formerly under the children of the sun."*

CALLAO AND THE ISLAND OF SAN LORENZO.

Captain Wilkes, who anchored for ten days at San Lorenzo, measured its three highest points with barometers. The result gave 896 feet for the southern, 920 feet for the middle, and 1284 feet for the northern summit.

The Bay of Callao, with the climate, combined with the prevailing winds, renders it a fine harbour. The island of San Lorenzo protects it on the west from the swell of the ocean, but its northern side is entirely exposed; but there is no danger to be apprehended from that quarter. A few miles to the north the in-

* "The proportion which the different sexes, castes, and conditions, &c., of the inhabitants of Lima bore to one another in the year 1818, may be learned from the subjoined summary taken from the census of Juan Baso, Oidor:—

Summary of Men and Castes.		Summary of Men by Wards.		General Amount of the whole.	Summary of Women by Wards.		Summary of Women by Castes.	
	number.		number.	number.		number.		number.
Secular Spaniards.	8,406	1st Ward.....	6,811	1st Ward...	7,375	{ Secular Spanish women.	{ 9,355
Priests and Friars.	1,331	2nd "	5,882	27,545	2nd " ...	6,990	Nuns.	506

Free Negroes and Pardos.....	4,220	{ Cercado, the higher part of the city so called... }		Cercado,...	312	{ Black and swarthy free women.	{ 7,715
Id. slaves.....	4,705	In wards.....	4,662	Id. slaves.	3,884
Total.....	22,883	27,545	54,098	26,553	26,553

fluence of San Lorenzo ceases; the surf there breaks very heavily upon the beach, and prevents any landing.

The plain rises gradually from Callao towards Lima. From the bay it is seen distinctly, about six miles distant, and does not appear to be elevated; yet Captain Wilkes, who measured the height of Mr. Bartlett's house above the level of the sea by sympiesometer, found it 420 feet high. This rise is scarcely perceptible passing over the road, except to one who has a practised eye.

Since 1821, Callao had improved, notwithstanding the vicissitudes it has gone through since that time.

"A fine mole has been erected, surrounded by an iron railing. On it is a guard-house with soldiers lounging about, and some two or three on guard.

"The mole affords every convenience for landing from small vessels and boats. The streets of Callao have been made much wider, and the town has a more decent appearance.

Water is conducted from the canal to the mole, and a railway takes the goods to the fortress, which is now converted into a depôt. This place, the sea-port of Lima, must be one of the great resorts of shipping, not only for its safety, but for the convenience of providing supplies. The best idea of its trade will be formed from the number of vessels that frequent it. I have understood that there is generally about the same number as we found in port, namely, forty-two, nine of which were ships of war; five American, two French, one Chilian, and thirty-five Peruvian merchantmen, large and small."—*Narrative*.

The castle of Callao has long been the key of Peru. Whichever party has had it in possession were considered as the possessors of the country. It is now converted into a custom-house, and is nearly dismantled. Only five of its guns remain out of 145.

The principal street of Callao runs parallel with the bay. There are a few tolerably well-built two-story houses on the main street, which is paved. These houses are built of adobes, and have flat roofs, which is no inconvenience, in consequence of the absence of heavy rains. The interior of the houses is of the commonest kind of work. The partition-walls are built of cane, closely laced together. The houses of the common people are of one story, and about ten feet high; some of them have a grated window, but most of them only a doorway and one room. Other dwellings are nothing more than mud walls, with holes covered with a mat, and the same overhead.

The outskirts of Callao deserve mentioning only for their excessive filth.

Callao is said to contain between two and three thousand inhabitants, but this number seems to be overrated. Several new buildings are in course of erection, notwithstanding the times of revolution. The principal street is about a third of a mile in length, and is tolerably well paved, with side-walks.

Coaches, or rather omnibuses, run several times a day to Lima. The old accounts of robberies on the road to Lima, are still fresh in the mouths of strangers. In times of revolution it was infested by robbers, but the steps taken by government have effectually put a stop to them.

On the road to Lima is Bella Vista; but it is in ruins, and has been so ever since the revolution. It was generally the outpost or battle-ground of the two parties, and although the soil in the plain which borders the sea is extremely fertile, consisting of decomposed rock, containing the elements of fertility in the greatest abundance, it is now a neglected waste. On approaching Lima, the gardens and fields are cultivated and irrigated. Fields of Indian corn are seen, some fully ripe, some half-grown, and others just shooting up. This bears testimony not only to the fineness of the climate, but to the fertility of the soil. The gardens near the city are filled to profusion with fruits of all descriptions.

The road, on its near approach to the city, forms an avenue of about a mile in length. This, in its prosperous days, was the usual, and most agreeable even-

ing drive. On each side are gardens filled with orange-trees, the fragrance of whose flowers, and the beauty and variety of the fruit, add to its attractions. It is now going to decay from utter neglect. *It is typical of Peru.*

CHAPTER XI.

BOLIVIA.

BOLIVIA extends north to south from 10 deg. 30 min., to 25 deg. south latitude; and east to west from about 57 deg. 50 min., to about 71 deg. 30 min. west longitude. It extends nearly three degrees and a half along the Pacific. The greatest length is estimated about 940 miles. The greatest breadth at about 850 miles.

Bolivia is bounded on the north by Peru; on the east by Brazil, and by the republic of Paraguay; south by the Gran Chaco, the republic of Salta, and Chile.

The region between the Pacific and the Andes is appropriately called the Desert of Atacamà. Few parts of it are stated to be fit for agriculture. The streams which flow from the mountains, are soon lost in the sands. The country south of the Alturas de Lipez consists chiefly of rocky ridges, with little vegetation, except in the elevated valleys, which are about 5000 feet above the level of the sea. In the latter, the grains of Europe, maize, and the fruits of southern Europe, are cultivated. The valley of Titicaca has a fertile soil, especially in the neighbourhood of the lake, where quinoa, potatoes, and barley are cultivated; but generally no other grains or culinary vegetables succeed, owing to the severity of the climate. The valleys south of the Sierra de la Cruz are the most populous and best-cultivated parts of Bolivia. The valley of Cochabamba, is reputed for the richness of its soil and products. The *Yungas*, or small valleys north of the Sierra de Santa-Cruz, are also productive. The rivers that drain these valleys, generally bring down gold, of which a considerable quantity has been collected. The Plains of Moxos and Chuquitos are covered with forests, with occasional savannahs. But although extremely fertile, they are thinly peopled, and inhabitants and cultivation appear only along some of the river banks.

The River Loa flows, for about 180 miles, to the Pacific, but brings down so little water that in summer it is only about fifteen feet broad at its mouth, and only a few inches in depth. Almost every other stream flowing west from the Andes is lost in the sands, and does not reach the sea. The Rio Desaguadero, which drains the valley of Titicaca, runs about 200 miles, until it disappears among some swamps and lakes. Many rivers descend from the eastern declivity of the Andes; and those which drain the country south of the Alturas de Lipez are also very numerous. They unite either with the rivers which fall into the Rio Madeira, or with those which constitute the most remote branches of the Pilcomayo, a great tributary of the Paraguay. Near 10 deg. 30 min. south latitude, the Madeira is joined by the navigable Beni. The Guapahi and Mamoré, as well as the Beni, are navigable from the places where they leave the mountains. The navigation of the Rio Madeira is, however, interrupted by cataracts, which occur between 9 deg. and 10 deg. south latitude. The cataract of Theotonio is said to be fifty feet high. Further down the Madeira is free from impediments to navigation, and may be navigated by vessels

of any size to the Amazon. But the Beni, Mamoré, Pilcomayo, and Bermejo, are navigable either to the Amazon, or Paraguay, for vessels sufficiently large to navigate the Atlantic.—(See account of the Rivers Amazon and Paraguay hereafter.)

The natural facilities for inland navigation possessed by Bolivia, east of the Cordilleras, and the fertility and power of production of which the soil is capable, are sufficiently great to render Bolivia a very rich and important nation.

Climate and Agriculture.—The discovered regions of Bolivia vary greatly in climate and productions. The region of Atacama is sterile, as it never rains; fogs are common during a part of the year. A little maize is cultivated in a few spots. The valley of Titicaca and the plains of Moxos and Chiquitos present a great contrast: both regions have a rainy season, which occurs from November to April; but while the rain descends in showers on the valleys, it falls in torrents on the plains. On the plains cacao, coca, indigo, cotton, rice, mandioc, and several tropical fruits are grown, whilst the forests supply copaiva balsam, sarsaparilla, caoutchouc, vanilla, and canella de clavo, and many other valuable plants and fruits, and excellent timber. The valleys between the mountains and plains have a temperate climate, and sufficient rain for the growth of the grains and fruits of Europe in the higher, and those of tropical countries in the lower regions. The forests of the eastern declivity of the Andes yielded cinchona bark.

The valley of Titicaca, as well as the savannahs of the plain, supplies pasture for cattle, horses, mules, and sheep. The mountain precipices, which are almost inaccessible to man, are resorted to by herds of guanacoos, vicunas, and llamas; a great number of llamas are used as beasts of burden in the valley of Titicaca. Fish is very plentiful in the rivers. Vicuna and sheep-wool, together with some hides, are articles exported to foreign countries.

Minerals.—Gold occurs in all the valleys of the Yungas, and is considered abundant in the Tipuani, a tributary of the Beni. Large pieces of native gold are found in rivers. Gold is also found in a mountain near the coast, but it is not worked. The mines of Potosi have, for a long period, supplied more silver than all the other mines of the world, and they are still worked, but it is said with loss. Mines occur in the valley of Titicaca, near Oruro, and west of Potosi, and in some other places. Copper is found in abundance on the surface, near the southern extremity of the valley of Titicaca: the ore is described as very rich, but it is not yet brought to the Pacific, as it will not pay the expense of carriage. Iron and lead occur, but they are not mined.

Population.—The population consists of the Spanish race, Mestizoes, and aboriginals. The latter constitute about three-fourths of the whole, and they are most numerous in the valley of Titicaca, in the Yungas, and on the plains. The native population of the valley of Titicaca consists of Peruvians, who are distinguished by their industry in agriculture, and the rearing of cattle and llamas. They speak the Quichua language. The plains are inhabited by numerous tribes, most of which are comprehended under the names of Moxos and Chiquitos. The Moxos, who are said to have been civilised by the missionaries, who commenced their labours about 200 years ago, have become an agricultural people; they cultivate different kinds of plants and roots, and live in fixed habitations. The Chiquitos appear to have retained their nomade habits. The Chiriguano and Zamucos are independent natives. Of the Spanish race, and of the Christianised aborigines, most of what is said relative to the inhabitants of Peru, applies to Bolivia.

Nothing can be more vague than the estimates of the population, which range from 500,000 to 1,500,000 inhabitants. The area of the departments into which Bolivia is divided has been computed as follows:—

1. Lamar, 30,000; 2. Cinti, 20,000; 3. Tarija, 12,000; 4. Potosi, 40,000; 5. Oruro, 12,000; 6. Chuquisaca, 24,000; 7. Cochabamba, 18,000; 8. La Paz, 65,000; 9. Santa Cruz de la Sierra, 159,000:—Total area, 380,000 square miles. These computations are mere estimates.

The town of Cobija or Lamar contains about 1500 inhabitants, but it is a miserable place: provisions, and even water, are brought to it from a great distance.

Tupiza, on the road leading from Buenos Ayres to Potosi, has about 5000 inhabitants, with some silver mines in the neighbourhood. Cinti has about 2000 inhabitants, and traffic in wine and brandy.

Potosi, the capital of the department of Potosi, is built on the declivity of the Cerro de Potosi. The town is situated at nearly 13,000 feet above the level of the ocean, and has about 30,000 inhabitants. About 250 years ago, it is said to have contained about 100,000 inhabitants. The streets are narrow and steep, but the houses are substantial. The surrounding country is destitute of vegetation. The mines are above the town, and elevated about 15,000 feet above the sea.

Oruro, situated in the valley of Titicaca, about 12,000 feet above the sea-level, and contains about 6000 inhabitants, engaged chiefly in working the silver mines in the neighbourhood.

Chuquisaca, is the seat of the general government of Bolivia. It is built in a beautiful valley, 9000 feet above the level of the sea. It has a cathedral and several substantial buildings, about 25,000 inhabitants, several institutions for education, including a university and mining school. Two roads lead from this town to the valley of Titicaca, that of Levichuco to Oruro, and that of Tolapalca to La Paz; the latter leads over a pass 14,375 feet above the sea.

Cochabamba is situated in a valley on the banks of a small river. Oropesa, has 16,000 inhabitants, and has manufactures of cotton and glass.

La Paz is situated in a narrow valley, many hundred feet below the level of the valley of Titicaca, on the banks of the Rio Chuqueapo. It contains about 20,000 inhabitants, and is the most trading town in the republic. A road over the pass of Gualillas (14,200 feet above the sea) leads from La Paz to the coast of Peru, and another over that of Pacuani (15,226 feet high) to Cochabamba and Oropesa. By these roads European commodities are brought to the countries east of the Andes, and gold and bark are exported by those routes.

San Lorenzo de la Frontera, situated on the banks of the Guapahi, is not far from the old town of Santa Cruz de la Sierra; it has about 4000 inhabitants, of whom about 1500 are of European race.

The great difficulty and expense of carrying commodities over the Andes to the populous districts of Bolivia, separated from the Pacific, had compelled the inhabitants to become their own manufacturers. Cottons and woollens are manufactured; tanneries are also numerous. There are also some glass-works, and manufactories of hats, cloth, &c.

We can say little of the government or statistics of this country. The executive, administrative, and legislative government differs little from that of Peru. Our observations on, and accounts of, the climate of Peru, apply as nearly as possible to Bolivia.—(See also the most recent maps of both countries.) Bolivia is a region of great natural advantages, which require only a thrifty, industrious, and skilful population to render its eastern provinces, especially, one of the most productive countries in South America.

CHAPTER XII.

CHILE.

CHILE extends along the Pacific from about 25 deg. to 41 deg. 50 min. south latitude; the island of Chiloe is separated from the continent by the straits of Chacao, and extends to 43 deg. 30 min. south latitude. Chile lies between 69 deg. and 72 deg. west longitude; from south to north its length is about 1170 miles, its breadth varies from 100 to 200 miles.

On the north Chile is separated from Bolivia by a desert, the boundary-line on the coast of the Pacific is near the village of Paposo.

The Andes, the highest part of which constitutes the eastern boundary-line of Chile, together with the high mountain masses which form the western declivity of the Andes, occupy a great part of the area of Chile; north of the Cuesta de Chacabuco, there are valleys between lofty ridges similar to the valleys of Peru; south of that there are extensive plains, and few ridges of hills except along the coast, where the highlands are almost continuous.

The western declivity of the Andes is abrupt and intersected by ravines, through which the rivers descend with impetuosity. The parts fit for cultivation are limited to where these ravines change into vales or plains. Southward the lower declivities are covered with fruit, northward they are generally bare and rocky.* There are silver mines, but few of them are worked. The hilly country is, in many parts, sandy or rocky, without any vegetation excepting some patches of cactus and coarse grass. The crops of maize in the mountain districts are said not to be sufficient for the inhabitants, who derive their chief means of subsistence from the labour in, and produce of, the silver and copper mines, and partly also from the fruits of the upper valleys. The plains, in most parts, afford good pastures. Some districts are fit for agriculture, and the remaining portions are sandy flats. The arable districts of Chile supply the countries of South America on the Pacific with grain, and the pastures with jerked beef and hides. The undulated country between the plains and the sea is, in many parts, covered with stunted trees; but grapes, and other delicious fruits, are also grown in the hilly countries.

Rivers.—The rivers of Chile, north of the Maypù, bring down little water; none are navigable; they serve, however, the important purpose of irrigating the lands. South of the Maypù, in 34 deg., the rains fall in sufficient quantities, and the rivers, though deeper, are not used for irrigation. The River Maule is navigable for vessels drawing about seven feet of water; it is navigable for river barges for about twenty miles. The Biobio, the largest of the rivers of Chile, flows a course of nearly 200 miles; at its mouth it is two miles wide, but too shallow for large vessels to enter. It is navigable for river craft to Nacimiento, about 100 miles from its mouth. The River Callacalla is deep enough for large vessels to enter its mouth. There are no large lakes of any importance in the valleys and plains. In the Andes there are some lakes, but, as far as known, the largest is not more than fifteen miles in length.

Climate.—Extending from north to south for sixteen degrees, and with a very irregular surface, the temperature of the climate of Chile is consequently

* In the narrative of the United States Exploring Expedition, Captain Wilkes observes—"On approaching the coast of Chile, every one is anxious to get a sight of the Cordilleras. There are only two periods during the day in which they can be seen to advantage, viz., in the morning before sunrise, and in the evening at sunset. The first is the most striking view. The outline is at that time of a golden hue, and may be easily traced, in a long line, running north and south. This gradually brightens, and is lost the moment the sun is seen. The evening view gives rise to disappointment. The mountains are seen at a great distance (eighty miles in a bird's flight), reflecting the setting sun, and, in consequence, appear much lower than is anticipated."

variable. In the valleys, especially in that of Copiabo, years pass over without rain falling. Further south showers occur only during three or four years, after which a rainy season drenches these southern valleys. In Aconcagua still further south, the number of rainy days do not generally exceed fourteen to twenty-one. South of the River Maypú rain falls sufficient for the cultivation of grain. At and near the River Biobio, rain falls regularly in winter, otherwise the sky is cloudless during six or seven months of the year; south of that river the rains are irregular, and fall heavily. The regions where rains fall are covered with forests; many of the trees afford excellent timber. In the arid regions, a few shrubs, stunted trees, and cactus, are the chief natural products.

The vegetable productions cultivated are similar to those of southern Europe. Maize is cultivated in the northern parts of Chile; wheat and barley are generally grown in the southern plains; and wheat and flour are exported to Peru and other places. Grapes, fruits, and such vegetables as are common in southern Europe, are produced abundantly in the valleys as far south as the River Biobio. The wines, of tolerable quality, are made for home use. Timber is exported from Chile and other parts.

The pastures of the southern provinces feed large herds of cattle; jerked beef, tallow, hides, and live stock are exported. Guanacoës and llamas abound in the northern provinces.

Minerals.—Gold is found in the sands of the rivers. It was formerly, but not at present, collected. Silver mines exist in the Andes, south of 33 deg.; north of that parallel they are numerous in the ridges between the valleys. In the arid and sterile desert between the valleys of Copiabo and Huasco, they are worked to a considerable extent. Copper ore abounds in the same region, and is imported into England, chiefly into Swansea to be smelted. Lead and iron exist, but they are not worked. In the country on the northern banks of the River Biobio there are extensive coal-fields partially worked. Salt is made from the water of a salt lake; it is also imported, partly from Peru, by sea, and from the native tribes of Patagonia, who make it from the salt lakes of that country.

Population.—The population of Chile consists of the descendants of the Spaniards, and aboriginal tribes. All the inhabitants, north of the River Biobio, are of European race, with scarcely any mixture of Indian blood. The aboriginals occupy almost exclusively the country south of the River Biobio. South of the Biobio the inhabitants known under the name of Araucanians, have preserved their independence in defiance of the Spaniards. They derive their subsistence chiefly from cultivating maize, potatoes, beans, and vegetables; and they rear large herds of cattle and horses. During the war of independence they made destructive inroads upon the country north of the Biobio; a successful war was afterwards carried on against them, which ended in a peaceful agreement.

As no census, that we know of, has been ever taken of the population; we can only state, that by an estimate made some years ago, the population was stated at 1,200,000 souls. The present population is considered to exceed 1 300,000 souls, exclusive of the Araucanians.

CHILE is divided into eight provinces, the area of which is estimated in square miles as follows:—Coquimbo, 48,000; Aconcagua, 14,000; Santiago, 12,000; Colchagua, 15,000; Maule, 12,000; Concepcion, 18,000; Valdivia, 40,000; Chiloe, 11,000: total area, 170,000 square miles.

Towns.—Copiabo, in the valley of the same name, about forty-five miles from the sea, has nearly 3000 inhabitants. Its port on the coast is bad, as the surf rolls in heavily, and the landing is very difficult; copper, copper ore, and silver are laden at this port, which has a village with about 1100 inhabitants. Ballenar, in the valley of the River Huasco, about forty-five miles from the sea, owes its rise to some silver mines in the neighbourhood. It contains about 7000 inhabitants, and takes its name from Ballenagh in Ireland, the birth-place of the family of O'Hig-

gins. La Serena, or Coquimbo, the capital of the province of the same name, is situated in the valley of the same name, about seven miles from the sea; it contains nearly 8000 inhabitants, and exports silver and copper ore; the harbour which is at the mouth of the river, is one of the best on this coast. Illapel, with about 1500 inhabitants, is situated in the neighbourhood of copper mines.

CONCEPCION, about two miles from the bank of the Biobio, and six miles from its mouth, was once the capital of Chile. It has been repeatedly destroyed by earthquakes, and devastated by the invasion of the Araucanians. Since its destruction by the great earthquake of 1835, it is nearly all in ruins. Timber and cattle are exported. Valdivia, the capital of the province of the same name, has an excellent harbour, well fortified, and contains about 2000 inhabitants.

THE ISLAND OF CHILOE is about 100 miles long, and, on an average, forty miles wide. The western shores of the island are rocky masses rising abruptly from the ocean to the height of 1500 or 3000 feet. The eastern shores are of moderate elevation, and in their natural state covered with forests among which are magnificent timber-trees. Rocky islands are scattered over the Gulf of Anud, most of which are inhabited; Quinchao and Lemuy are populous. The inhabitants of the settlements of Calubeo and Carelmapú are chiefly Indians, few in number, and occupied chiefly in cultivating timber. The majority of the inhabitants of Chiloe and of the adjacent islands are aborigines. The whole population of the province of Chiloe in 1832, amounted to 43,000. They export timber, wheat, hams, &c. The shores and bays abound in varieties of excellent fish. The shellfish is described as delicious.

SAN CARLOS is the capital of the province of the same name, with a good harbour, and about 4000 inhabitants.

Manufactures.—The facility with which foreign manufactured goods can be imported into Chile has wisely discouraged the establishment of any important manufactures. A large portion of the population, however, wear home-made stuffs, especially woollen; the importation of British manufactures is increasing; steam-boats from England ply along the coast of Chile; but under the Spanish rule the coasting trade was discouraged.—(See Statistics and Trade of Chile hereafter.)

In 1810, the population of Chile rose against Spain, they were defeated in 1814 at Rancagua by General Osorio, and obliged to submit to their former rulers. In 1817 San Martin, with an army from Mendoza, gained the battles of Chacabuco (1817) and Maypú (1818), the result of which was the independence of the country. The constitution then adopted is still considered the fundamental law, and formed on the principle of a centralised government. The executive power is vested in a supreme director. The legislature is composed of a senate and a house of representatives. The senate consists of twenty members at the most, and every 15,000 inhabitants sends a member to the house of representatives.

DESCRIPTIVE SKETCHES OF CHILE AND VALPARAISO: SANTIAGO COPPER MINES.

VALPARAISO has increased in population, extent, and importance within the last twenty years, and has become the great sea-port of Chile and the western coast. Its harbour is inferior to others on the coast, yet it is the nearest and most convenient port to *Santiago*, the capital.*

* Captain Wilkes observes, "The northerners are greatly dreaded, although I think without much cause. One of them, and the last of any force, I had myself experienced in June, 1822 (whilst in command of a merchant vessel). In it eighteen sail of vessels were lost. But since that time vessels are much better provided with cables and anchors, and what proved a disastrous storm then would now scarcely be felt. I do not deem the bay so dangerous as it has the name of being. The great difficulty of the port is its confined space, and in the event of a gale, the sea that sets in is so heavy, that vessels are liable to come in contact with each other, and to be more or less injured. The port is too limited in extent to accommodate the trade that is carried on in it. Various schemes and improvements are talked of, but none that are feasible. The

Captain Wilkes says,

"I have had some opportunity of knowing Valparaiso, and contrasting its present state with that of 1821 and 1822. It was then a mere village, composed, with but few exceptions, of straggling ranchos. It has now the appearance of a thickly settled town, with a population of 30,000, five times the number it had then. It is divided into two parts, one of which is known by the name of the Port, and is the old town; the other by that of the Almendral, occupying a level plain to the east. Its location is by no means such as to show it to advantage. The principal buildings are the custom-house, two churches, and the houses occupying the main street. Most of the buildings are of one story, and are built of adobes or sun-dried brick. The walls of the buildings are from four to six feet thick. The reason for this mode of building is the frequent occurrence of earthquakes. The streets are well paved. The plaza has not much to recommend it. The government-house is an inferior building. Great improvements are now making, and many buildings on the eve of erection.

"They are about bringing water from one of the neighbouring springs on the hill, which, if the supply is sufficient, will give the town many comforts. On the hills are many neat and comfortable dwellings, surrounded by flower-gardens. These are chiefly occupied by the families of American and English merchants. This is the most pleasant part of the town, and enjoys a beautiful view of the harbour. The ascent to it is made quite easy by a well-constructed road through a ravine. The height is 210 feet above the sea. The east end of the Almendral is also occupied by the wealthy citizens. The lower classes live in the ravines. Many of their habitations are scarcely sufficient to keep them dry during the rainy season. They are built of reeds, plastered with mud, and thatched with straw. They seldom contain more than one apartment.

"The well-known hills to the south of the port, called the 'Main and Fore Top,' are the principal localities of the grog-shops and their customers. These two hills, and the gorge (*quebrada*) between them, seem to contain a large proportion of the worthless population of both sexes. The females, remarkable for their black eyes and red 'bayettas,' are an annoyance to the authorities, the trade, and the commanders of vessels, and equally so to the poor sailors, who seldom leave this port without empty pockets and injured health.

"It was difficult to realise the improvement and change that had taken place in the habits of the people, and the advancement in civil order and civilisation. On my former visit, there was no sort of order, regulation, or good government. Robbery, murder, and vices of all kinds, were openly committed. The exercise of arbitrary military power alone existed. Not only with the natives, but among foreigners, gambling and knavery of the lowest order, and all the demoralising effects that accompany them prevailed.

"I myself saw on my former visit several dead bodies exposed in the public squares, victims of the *cuchillo*. This was the result of a night's debauch, and the fracas attendant upon it. No other punishment awaited the culprits than the remorse of their own conscience.

"Now, Valparaiso, and indeed all Chile, shows a great change for the better; order reigns throughout; crime is rarely heard of, and never goes unpunished; good order and decorum prevail outwardly everywhere: that engine of good government, an active and efficient police, has been established. It is admirably regulated, and brought fully into action, not only for the protection of life and property, but in adding to the comforts of the inhabitants."

depth of water opposes an almost insuperable obstacle to its improvement by piers. The enterprise of the government, and of the inhabitants of Valparaiso, is, I am well satisfied, equal to any undertaking that is practicable.

"From the best accounts, I am satisfied that the harbour is filling up, from the wash of the hills. Although this may seem but a small amount of deposition, yet after a lapse of sixteen years, the change was quite perceptible to me, and the oldest residents confirmed the fact. The anchorage of the vessels has changed, and what before was thought an extremely dangerous situation, is now considered the best in the event of bad weather. The sea is to be feared rather than the wind, for the latter seldom blows home, because the land immediately behind the city rises in abrupt hills, to the height of from 800 to 1500 and 2000 feet."

The Chilians, when compared with other South Americans, love their country, and are fond of their homes. The people are attached to agriculture, and the lower orders are better disposed towards foreigners than in the other Spanish republics. Schools and colleges have been established, and a desire to extend the benefits of education throughout the population is evinced.

The shops are well filled with articles of English, American, and French manufacture. The markets are abundantly supplied. There are no market-gardens in the vicinity of Valparaiso, and most of the vegetables are brought from the valley of Quillota, in panniers, on the backs of mules; grass or clover is brought to market on horseback, which almost covers both horse and rider.

SANTIAGO.—The elevation of Santiago above the sea is 1591 feet, and stands on the third step or plain from the coast. Its entrance is through avenues between high adobe walls.

The Cordilleras have at all times an imposing aspect when seen from the neighbourhood of Santiago, and their irregular outline is constantly varying under the effects of light and shade. Santiago is surrounded by orchards, gardens, farms, and grazing-grounds. The city being enclosed by high adobe walls, gives it a gloomy appearance until entered, when the streets have a fresh and clean look—it is laid out in squares. The streets are paved, and have side-walks. This clean appearance is owing to a law obliging the inhabitants to whitewash their houses and walls once a year, and to the white contrasting with the red-tiled roofs. The houses are mostly one-story high, built round a court or square, from twenty to forty feet wide, round which the rooms are situated. The roof projects to form a kind of piazza or covered way. The gateway is usually large, and the rooms on each side of it are not connected with the rest of the building, but rented as shops. Opposite to the gateway is the centre window, guarded by a light and ornamental iron frame, painted green or richly gilt. The court is usually paved with small pebbles from the bed of the Mapocho, arranged fancifully: in many cases, the courts are laid out in flower-plats, with roses and geraniums.

The River Mapocho runs through one portion of Santiago, and supplies it with water. In the centre of the city is the great plaza, where the public buildings are situated. These are built of a coarse kind of porphyry from the mountains; the cathedral and palace each occupy one side; in the centre is a fountain, with several small statues of Italian marble. All the public buildings are much out of repair, having been damaged by earthquakes.

The cathedral is a large edifice—its altar is decked with gold and silver. There are within it paintings and hangings, among which is a large number of trophies, taken in the wars. The niches are filled with wax figures of saints, and there are also *“the remains of two martyrs of the church, in a tolerably good state of preservation.”*

The palace, originally built for the viceroy, is now appropriated to the accommodation of the president and the public offices. On the side opposite to the palace is a colonnade, not yet finished, intended to occupy one whole side of the plaza. Under its portico are fancy and dry-goods shops, and between the columns various trades, or lace and fringe-makers work. In the evening it is resorted to by females, with large flat baskets, vending shoes, fruit, and fancy articles; others are cooking cakes, and the whole portico is lighted up, and much resorted to.

The mint occupies a square; it has never been completed, and has suffered from earthquakes. The operation of coining is in the rudest form. Both rolling and cutting are done by mule power.

The public library contains several thousand volumes, which formerly belonged to the Jesuits, and many curious manuscripts relating to the Indians.

The amusements are chiefly the theatre and chingano, and it is called a quiet rity. The siesta is daily indulged in; even the shops are shut in the afternoon, and the city is as quiet as midnight. Towards the cool of the evening, the aborigines resort to the alameda, a beautiful walk, well shaded, about a mile in extent, along one bank of the river. It is planted with a double row of poplar trees. Streams of water are constantly running on each side of the walk; within a few yards of each stone seats are placed, which are at times filled with a well-dressed population.

The markets are well supplied; there is one near the banks of the Maypocho which covers an area of four or five acres, and is surrounded by a low building with a tile-roof, supported by columns, under which meats of all kinds are sold. In the centre are sold vegetables, fruits, flowers, poultry, and small-wares; the market-women are seated under awnings, screens, and large umbrellas, to keep off the sun. The market is clean.

The average price of a horse is twelve dollars, but some that are well broken are valued high.

The climate of Chile is justly celebrated, that of Santiago is delightful; the temperature is usually between 60 deg. and 75 deg. The country round is extremely arid, and were it not for its mountain streams, which afford the means of irrigation, all Chile would be a barren waste for two-thirds of the year. Rains fall only during the winter months (June to September), and after they have occurred the whole country is decked with flowers; the rains often last several days, are excessively heavy, and during their continuance the rivers become impassable torrents. At Santiago the climate is drier and colder, but snow rarely falls; on the ascent of the Cordilleras, the aridity increases with the cold; the snow was found much in the same state as at Terra del Fuego, lying in patches about the summits. Even the high peak of Tupongati was bare in places, and to judge from appearances, it seldom rains in the highest regions of the Cordilleras, to which cause may be imputed the absence of glaciers.

CHAPTER XIII.

PATAGONIA AND THE SOUTHERN ISLANDS.

PATAGONIA, together with the islands of the straits south to Cape Horn, extends from the mouth of the Cusu Leubu, or Rio Negro, in 39 deg. south latitude to Cape Horn (55 deg. 54 min. south latitude), a distance of about 1180 miles, and between 64 deg. and 76 deg. west longitude; in breadth between 420 and 200 miles. On the north it is separated from the Argentine Republic by the River Negro. On all other sides it is surrounded by the ocean.

Along the Pacific the Patagonian Andes occupy the surface from thirty to forty miles from the sea. The climate of this region is excessively wet, and the rains fall during the greater part of the year. Strong westerly gales occur frequently. The rains prevent both excessive cold or heat. The mountain region is generally covered with forests except along parts of the shores of the Pacific. The vegetation is luxuriant north of 48 deg., and stunted further south. The remainder of Patagonia consists chiefly of plains, which slope gradually from the Andes towards the Atlantic, and which, owing to the want of rain, are described, but not on what we consider good authority, as little else than a

desert. Gales from the west prevail; the winters are severe; shrubs and coarse grass constitute the principal vegetation.

The Patagonians live on their horses and on the wild cattle, which abound in the northern districts, and on the guanacoës, caviars, armadillos, and emus, which abound in the more fertile pastures. There are pumas and wolves, and along the coast of the Atlantic seals and sea-lions. Fish is abundant in the inlet of the western coast; salt-lakes, or lagoons, are found along the eastern shores.

The plains on the continent, as well as on King Charles's Southland, are inhabited by the Patagonians, a race of men described as of enormous size, though modern travellers have not found them to be such giants as they were described by some older voyagers; their average height seems to be about six feet or somewhat more. They lead a nomade life, and travel rapidly from one extremity of the country to the other. They are divided into four tribes: the Chulian, living near the Andes, the Moluche, who occupy the interior, and the Pehuelche, who live along the coast. The Tehuelhet inhabit the plains adjacent to the Straits of Magalhaens.

The south mountain region is inhabited by the Fuegians, a race of a short stature varying in height from four feet ten inches to five feet six inches. They live by fishing in the inlets, and pass most part of their lives in small canoes.

CHAPTER XIV.

BUENOS AYRES, OR ARGENTINE REPUBLIC.

THE federal republic, called on its formation the *Argentine Republic*, including Monte Video and Paraguay, named also the provinces of La Plata, from the wide estuary of that name, lies between 21 deg. and 41 deg. south latitude, and 53 deg. 30 min. and 72 deg. west longitude. Along the meridian of 66 deg. west longitude they extend from south to north about 1120 miles, and in the parallel of 34 deg. south latitude, about 880 miles from east to west. On the south, the River Cusu Leubu, or Rio Negro, forms the boundary line between these provinces and Patagonia. On the east they are bounded by the Atlantic Ocean from the mouth of the Rio Negro north to Brazil, which extends along the northern line as far west as the River Paraguay (58 deg. west longitude), and west of that river by the republic of Bolivia. The principal range of the Andes extends along the western frontier separating the Argentine Republic from Bolivia and Chile.

When these countries became independent of Spain, they formed a federal union. Since that time they have broken up into separate republics.

THE REPUBLIC OF BUENOS AYRES extends, it may be said, along the Atlantic Ocean from Rio Negro on the south, to the mouth of the Rio de la Plata; and along the whole southern shores of its estuary, and also along the southern banks of the Paraná as far as the Arróyo del Medio, a river which separates it from Santa Fé. The western boundary runs from the mouth of the River Nepostá, in a north-eastern direction to the western extremity of the Sierra del Vulcan, and thence it continues north to about 61 deg. longitude to the fortress of Cruz de Guerra (35 deg. 30 min. south latitude), and thence to the fortress of Melinqué (33 deg. 42 min. south latitude). This boundary separates Buenos Ayres from the territories of the Southern Indians. A line from Melinqué to the Arróyo del Medio, forms the boundary-line between the republics of Buenos Ayres and Santa Fé. The area within these boundaries is estimated

at about 75,000 square miles. But this estimate is a vague calculation, and the limits of Buenos Ayres, from the disturbed state of the country, are not settled.

The northern part includes a portion of the Eastern Pampas; the surface of the whole country is nearly flat, diversified by slight undulations. A very large portion of this state has a fertile soil for arable culture or pasturage; a tract south of the Rio Salado is low and covered with swamps, or lakes. The most southern portion comprehends the Sierra del Vulcan, and the south-eastern extremity that of Ventana. The plain between these ranges is said to be fit for arable culture. No part of it is cultivated. The climate of the northern portion is mild; ice is seldom formed. In summer the thermometer rises to about 90 deg. The north winds which prevail are as disagreeable as the sirocco of Italy. The south-western winds, or pamperos, blow furiously, sometimes accompanied by thunder and lightning. In the southern districts the climate is nearly as severe as in above 50 deg. north latitude in Europe, but it is healthy. Both regions have sufficient rain for vegetation: the rains fall most abundantly before the setting in of the cold weather in April and May.

Cattle and agricultural products form the chief sources of wealth. The number of black cattle that pasture on the pampas is stated to exceed one million. Hides, hair, and horns are exported, and also tallow, and jerked beef. The hides weigh from fifty to sixty pounds on an average. Horses are numerous, and, as well as mules and asses, are exported. Of late the breed of sheep has been improved, and wool constitutes an article of export. The cultivation of the ground was formerly so much neglected, that corn and flour were imported, but some wheat has been exported to some amount.

BUENOS AYRES, the capital, is situated on the south shores of the La Plata, nearly opposite the mouth of the River Uruguay, on level ground, and several feet above the water. Vessels of moderate size may sail up the river as far as the town, but they cannot approach it on account of shoals which intervene between the shores and the deep water. The city is regularly laid out: the streets intersect each other at right angles. Nearly all the streets are now paved with granite. The houses are low, few of them having more than one story, and the town covers at least twice the area of an European city with the same population. The public buildings which have any architectural pretensions are the churches; but most of them are unfinished. The town is badly provided with water; that which is in the wells is brackish, and those inhabitants who can afford the expense have tanks, in which the rain-water is collected from the roofs of the houses. Many of the houses have small gardens attached, and have European or United States articles of furniture. The water of the river is good, but there are no means of bringing it to the town. Water-carriers retail it to the lower classes. The population, about 80,000 souls, is composed almost entirely of the Spanish race; the number of mulattoes is small, that of the negroes still less. No manufactures are carried on. Buenos Ayres is the seat of government, has a university, an observatory, a public library, and some scientific institutions. The English and Scotch have places of worship, and a burial-place. The trade of Buenos Ayres is considerable, as it is the principal place whence the productions of the provinces of La Plata are exported to foreign markets, and through which they are provided with foreign merchandise.—(See Statistics of Buenos Ayres hereafter.)

The population of the whole province probably does not much exceed 200,000. The great disproportion between the population of the capital would be remarkable, were it not that there is not probably one acre in one thousand under arable culture: all the remainder fit for agriculture being used as pasture. The executive power is vested in the governor, or captain-general, as he is styled,

who is elected for five years. He is aided by a council of ministers, appointed by himself, but responsible to the Junta, or Legislative Assembly, of the republic by whom he is elected. The junta itself consists of forty-four deputies, one-half of whom are annually renewed by popular election. But under Rosas all constitutional government has been reversed; the public press, except two vile journals under his direction, has been suppressed.

The south-western Indian country is very little known, but it is said to be more undulated than the *pampas*. Between the Andes and the plains, there extends a hilly country from 100 to 110 miles in breadth; and an undulated country with woods, and stretches thence to the centre of the plains to the purely pasturage or *pampas* region, which extends to the country of clover, weeds, and thistles. West of Buenos Ayres, the Guacho and his herds of wild cattle, inhabit these rich pastures. Sulphur is abundant there, and coal is said to exist; rock salt is found.

The REPUBLIC of ENTRE RIOS, is situated between the rivers Uruguay and Paraná, west of Uruguay. On the north it is divided from the republic of Corrientes by the Mocoreta and by the Sarandi. Estimated area 32,000 square miles. The southern portion is an alluvial plain, annually inundated. To the north, the country is undulated and swampy. A considerable part is prairies, which affords good pasturage on which herds of cattle and horses abound; hides, horns, tallow, and jerked beef, are exported. Cultivation is limited to a few places. The climate is temperate and salubrious. This republic only requires to be relieved from anarchy to become a most productive region.

BAJADA DE SANTA FÉ, the capital, on the banks of the Paraná, contains about 6000 inhabitants. Concepcion de la China, on the Uruguay, has 2000 inhabitants.

The REPUBLIC of CORRIENTES extends from the boundary-line of Entre Rios to the Rio Paraná, which separates Corrientes from the republic of Paraguay. Estimated area about 20,000 square miles. The southern portion is undulated, partly wooded, and fertile. The northern parts are swampy, and comprise the Lake Ybera. The climate is warm. Cotton, sugar, and indigo are grown. Maize is the common grain. *Seta silvestre*, a kind of silk made by a species of caterpillar, is used for making coarse stuffs. Agriculture is little attended to; some cotton and tobacco are exported.

CORRIENTES, the capital, near the confluence of the rivers Paraná and Paraguay, it has 4500 inhabitants, and some trade.

The REPUBLIC of MISSIONES, situated between the rivers Paraná and Uruguay extends to the boundary of Brazil. Surface is undulated; the soil is fertile. It was the principal seat of the *Missiones*, established by the Jesuits among the Guaraní Indians formerly. The population once estimated at near 100,000 inhabitants, is at present about 10,000. The climate is warm; the country produces rice, maize, tobacco, sugar, and cotton, but it is now nearly a wilderness. Estimated area about 7500 square miles. Entre Rios, Corrientes, and the *Missiones* constitute, geographically, one country; and it was a descent to the ridiculous to have formed these into separate governments.

The REPUBLIC of SANTA FÉ lies on the western banks of the Paraná, and comprehends the region between that river and the Rio Salado. On the south it is bounded by the Arroyo del Medio. On the west, a desert separates it from Cordova; and on the north it extends towards the Laguna Salados de los Porongos, and the deserts of the Gran Chaco. The surface of the country is a plateau, from forty to sixty feet above the level of the Paraná, partly covered with the coarse grass and thistles of the *pampas*, and partly with low mimosa trees. It is said scarcely ever to rain in this country. Cattle and horses consti-

tute the wealth of the people. The River Tercero, or Carcaranal, which joins the Paraná at Fort St. Espiritu, is navigable. In the northern districts there is a small tribe of Guaycurus, in a state of independence.

SANTA FÉ, the capital, has about 4000 inhabitants. Rosario is a considerable place, built on the high banks of the River Paraná.

THE REPUBLIC OF CORDOVA lies west of Santa Fé. An uninhabited country separates it on the east from Santa Fé. On the north it is separated from the republics of Santiago del Estero and Catamarca by the Travesia de Ambargasta and the Great Salinas; on the west by the republic of St. Luis de la Punta. The soil is generally a sandy loam, and not fit for cultivation without irrigation; the rains and the streams supply water for the pastures. Herds of cattle, sheep, and goats, are reared in abundance. Maize is cultivated in the valleys, and a little wheat in several places. The fruit-trees of southern Europe succeed. The eastern portion of the republic is nearly uninhabited and chiefly covered with low mimosa trees.

CORDOVA, the capital, stands on the small River Primero, in a valley about 200 feet below the surrounding plains. It is regularly laid out, well built, and has a cathedral; and a university erected by the Jesuits; the population is about 14,000 souls. Alta Gracia, a neat town near the base of the Sierra de Cordova, contains 4000 inhabitants.

THE REPUBLIC OF SAN LUIS DE LA PUNTA lies west of Cordova and extends to the Rio Desaguadero. On the south it is contiguous to the country of the Ranqueles. On the north it extends over the greater part of the *travesia desert*, which borders on the Great Salinas. It is said to be a very poor country. The northern districts are almost uninhabited, and in many places covered with low mimosas; in others, without trees and vegetation, and covered with saline efflorescences or with sand. The southern districts are crossed by rocky ridges. It has a few pasture grounds for cattle and goats. There are some silver mines in the Cerro Solosta, called Las Carolinas, which are worked on a small scale. The climate is dry and hot; rain seldom occurs.

SAN LUIS DE LA PUNTA, the capital, has about 1500 inhabitants.

THE REPUBLIC OF MENDOZA comprehends the country west of the Desaguadero de Guanacache as far as the Andes, including the Vale of Uspallata. It extends north to south for about 32 deg. south latitude. This republic is flat, with the exception of the Paramilla eastern range of the Andes. The soil is sandy, with little grass, and occasionally covered with mimosa trees. When irrigated, the soil will yield abundant crops of wheat, Indian corn, and lucerne. Rain and dew are rare, except in the southern districts on the banks of the River Diamante, where more corn may be raised without irrigation. The climate is dry and healthy, though great heat is experienced in summer. It is very favourable to the growth of figs, peaches, apples, nuts, olives, and grapes. There are some silver-mines notwithstanding the Paramilla Range on the side of the Vale of Uspallata. Cattle and horses are not numerous; mules are exported.

MENDOZA, the capital, is near the eastern declivity of the Paramilla Range, 4891 feet above the sea-level, and is a well-built town, with about 12,000 inhabitants. Two well-frequented roads lead from this place to Chile, over the Andes, by the mountain-passes of Uspallata and of Portillo. San Martin, or Villanueva, west of Mendoza, is a thriving place, with about 2000 inhabitants.

THE REPUBLIC OF SAN JUAN DE LA FRONTERA extends along the base of the Andes from 32 deg. to 30 deg. south latitude, and includes the northern part of the Vale of Uspallata. The soil resembles that of Mendoza. The climate is healthy, though dry. Both rain and dew are rare; the heat is not

excessive. It is very favourable to fruit, and wine constitutes an article of export.

SAN JUAN, the capital, is situated on the banks of the Rio de San Juan, and is said to have a population of 8000. It has some export trade in the wines and brandies of the country, and in foreign goods for home consumption. A road from it leads to the mountain-pass of Patos, in the Andes, whence it descends into Chile by the Vale of Putaendo.

The REPUBLIC of RIOJA lies principally within the Andes, between 30 deg. and 28 deg. south latitude: it extends over two valleys. The Vale of Guadacol, between the Andes and the Sierra de Famatina, is fertile, and not too warm for the growth of wheat; it has also copper mines; but neither the wheat nor the copper can be brought to market on account of the expense. The inhabitants, who are mostly of Indian origin, hunt the vicuña for its skin. Some silver mines are worked on a small scale.

RIOJA, the capital, not far from the eastern base of the Sierra Velasco, has some trade in the products of the country, and between 3000 and 4000 inhabitants.

The REPUBLIC of CATAMARCA lies further north, extending over some valleys which run south and north, and intersect the mountain-region of the Despoblado, where it is contiguous to the principal chain of the Andes. It appears to contain several fertile valleys between the mountains, in which cattle are reared and corn raised. Cotton and red pepper are cultivated for exportation.

CATAMARCA, the capital, contains about 4000 inhabitants.

The REPUBLIC of SANTIAGO DEL ESTERO lies to the east of the Great Salinas, between 27 deg. and 30 deg. south latitude, and 62 deg. and 65 deg. west longitude. It comprehends two narrow and long cultivable tracts, along both banks of the rivers Dulce and Salado, and vary from one to five miles in width. On the cultivable tracts wheat and Indian corn yield good crops. Cochineal to some extent is collected, as well as honey and wax. The climate is considered to be the hottest in South America. Ponchos, blankets, and coarse saddle-cloths are made and sent to the neighbouring countries.

SANTIAGO DEL ESTERO, the capital, on the banks of the Rio Dulce, contains about 4000 inhabitants. Matara is on the Rio Salado, and from that place downwards the river is navigable for large river-boats.

The REPUBLIC of TUCUMAN, north of Santiago del Estero, lies between 26 deg. and 27 deg. 30 min. south latitude, and 62 deg. and 66 deg. west longitude. The western districts, which are contiguous to the Sierra Aconquija, are chiefly covered with high mountains, among which there are a few narrow valleys. The mountains are covered with high forest trees, and contain good pasture. There are also some mines of gold, silver, copper, and lead. The central part of the republic extends over the most fertile and best cultivated part of the plain of Tucuman. It is considered the Garden of the Provinces of La Plata. It yields wheat, maize, rice, tobacco, and sugar. The cattle are of large size. Horses and mules are exported. The climate is dry and hot, but healthy. The eastern districts on both sides of the Rio Salado are rather sterile, and there are only a few settlements on the banks of the river. A great number of Indians within this republic speak the Quichua language.

TUCUMAN, the capital, situated on a plateau, contains about 8000 inhabitants. It has some trade, and exports horses and mules to Bolivia.

The REPUBLIC of SALTA is the most northern of the Argentine republics, and extends over the Despoblado range of the Andes, and the plains which lie between the rivers Salado and Vermejo, south of the mountains. Its boundaries are not

well defined, and its area is supposed to equal that of Paraguay. The few Indians collect some gold, and hunt the vicuñas, alpacas, and chinchilla, for their skins and wool, and bring down ice and salt to the valleys. Near the southern slope of the mountains are the silver mines of San Antonio de los Cobres and of Acay. The elevated valleys produce wheat and maize; the declivities are generally wooded or pasture lands. The valleys along the rivers Salado and Lavayén, produce rice, maize, and tropical fruits, sugar, indigo, cotton, and tobacco. On the banks of the Vermejo cochineal is collected, and the cocoplant is raised; the tree from which the yerba-maté, or Paraguay tea, is obtained, is indigenous. The climate is as various as the productions. On the Despoblado, the weather all the year round resembles winter in England; the low country on the Rio Vermejo suffers from excessive heat. The valleys have a more or less temperate climate, according to their elevation.

SALTA, the capital, is situated in a valley, exposed to inundations; it contains from 8000 to 9000 inhabitants; its commerce is inconsiderable. Jujuy, with about 4000 inhabitants, on the banks of the river of the same name, is a trading place, though the mountain-pass begins here which runs northward to Tupiza, Potosi, and Chuquisaca, and over the Abra de Cortaderas, about 12,000 feet above the level of the sea.

The population of all the Argentine states, or provinces, is vaguely estimated as follows, viz.:—Buenos Ayres, about 210,000; Uruguay, 115,000; Entre Rios, 34,000; Corrientes, 38,000; Misiones, 9000; Paraguay, 400,000; Santa Fé, 17,000; Cordova, 86,000; San Luis, 24,000; Mendoza, 40,000; San Juan, 24,000; Rioja, 19,000; Catamarca, 34,000; Santiago, 48,000; Tucumán, 44,000; Salta, 55,000.

In the southern provinces the inhabitants consist chiefly of the Spanish race. In Paraguay the Misiones and Corrientes, the Guarani Indians, who were civilised by the Jesuits, constitute the great majority of the people. Indian families are settled in Entre Rios, Santa Fé, and Cordova. In the republics north of 28 deg. south latitude, there are Indians who speak the Quichua, or Peruvian, language. A great portion of the region is still the undisputed property of native tribes. Numerous tribes inhabit the Gran Chacó, between the Paraguay and Paraná, and the Rio Solado. The Guaycuru tribe is said to be the most numerous. The Ranqueles, and unknown tribes, inhabit the country south of 35 deg. south, west from Buenos Ayres to the Cordilleras. The pampas Indians are a nomade people, who move over the pastures with their cattle.

The **GUACHOS**, of Spanish race, are also scattered over the pampas. They are said not to be numerous, and live in huts. They are early trained to ride, and hunt with the lasso. They live on animal food, the produce of their herds and hunting. Their drink is water, are strong, and can endure great fatigue. They are described as hospitable to strangers.

Manufactures.—A few woollen stuffs are made at Santiago del Estero, and sent to the neighbouring countries. British manufactures have hitherto been chiefly used.

Trade.—The internal commerce is considerable, as almost every republic produces something peculiar, which is in demand in the neighbouring countries. It is also facilitated by the level character of the country, and its climate, which is generally dry; the roads, also, are tolerably good. The navigation on the Paraguay River extends north to Brazil, on the Paraná up to the Apipé, on the Uruguay up to the Salto Chico, to which places vessels of 300 tons' burden may ascend. By this inland navigation the products of the northern republics are brought to Buenos Ayres or Monte Video, whence they are exported. But the commerce with the neighbouring republics and to Brazil is unimportant; horses and mules were for-

merly exported in large numbers to Bolivia and Peru; this trade is said to have nearly ceased. The ports of Monte Video and Buenos Ayres engross nearly all the maritime trade.

Government.—The existing government of Buenos Ayres, under Rosas, is a military despotism. Most of the inland provinces, and especially the Guacho inhabitants of the pastoral regions, are, in a great degree, independent.

CHAPTER XV.

THE REPUBLIC OF PARAGUAY.

THE whole of Paraguay and the republic of Monte Video have scarcely at any time, since the revolt and independence of the Argentine Provinces, joined in the federal association of republican states, nominally included in the Argentine Confederation.

Paraguay comprehends the extensive region between the rivers Paraná and Paraguay, and extends from between 21 deg. and 27 deg. 30 min. south latitude, and 54 deg. to nearly 58 deg. west longitude. Estimated area vaguely stated at from 70,000 to 90,000 square miles.

It was discovered by Sebastian Cabot, or Gaboto, in 1526; Alcedo describes it thus;—

“It is of a warm and moist temperature, from the number of woods, lakes, and rivers with which it is covered, and from the various overflowings which are formed between the months of November and April, when the rains are most abundant. It is watered by an infinite number of rivers, the principal of which are, first that of its own name, and then those in the northern parts of Porrudos, Mboteley, Tobati, Ipane Piray, and others of less note; and in the south part, those of Cañabé and Tibiquari, this dividing this province from that of the Río de la Plata of Buenos Ayres.

“The woods are many, and in them grow in abundance sour oranges, citrons, limes, and other wild fruits, of which conserves are made. There are also trees of very good timber, and fine wood, such as cedars, *petoroques*, *urundais*, *tajibos*, and others; of the first they make canoes and slabs, which they carry to Buenos Ayres for vessels and for other uses. In these woods are found a variety of birds and animals, such as rabbits, hares, partridges, wild-boar, deer, and other species of creatures less known, such as *quiriquinchos*, *mulitas*, and *aperiades*; but from the great quantity of neat cattle, the flesh of which is preferred to any other here, none of the above animals are ever hunted; sometimes, however, the inhabitants will hunt geese, which abound in the lakes and the shores of the river, and kill great numbers. Here also breed goldfinches, nightingales, larks, green parrots, long-tailed parrots, others of most beautiful plumage, and peacocks; nor are there wanting ostriches, and birds of prey.”

The Jesuits laboured so assiduously and successfully to convert the Indians, that the greater part of the country came under the power of the former; they extended their dominion over Paraguay, and organised the Indians into a disciplined body of militia, and prevented all persons, both Spaniards and Portuguese, from entering their territories.

From Paraguay and Paraná they drew great revenues; their converts worked for them cheerfully, at stated periods, on their plantations; and the Jesuits not only imported every thing necessary for their people from Europe, but they also sent immense sums to the superiors of their order at Rome. The Indians were care-

fully kept in ignorance of the Spanish language; they were instructed in all sorts of useful arts, and trained to the fatigues of military life. They were formed into large bodies of cavalry and infantry, and well supplied with arms and ammunition: as cavalry, the aboriginals were distinguished equestrians:

Many hundred thousands of the native races came under the authority of, and became infatuated subjects to, the Jesuit fathers. But in 1750 the courts of Madrid and Lisbon entered into a treaty for the purpose of definitively fixing the boundaries of their respective possessions in the western world.

Commissions were appointed in 1752, to carry this treaty into execution. The representations of the Jesuits, who secretly thwarted the extension of the Portuguese limits, caused a war between Spain and Portugal, in which the Indians took an active part against the Portuguese. The court of Lisbon, in consequence, or rather the Marquis of Pombal began to entertain suspicions of the real motive of the Jesuits in forming such extensive establishments in America.

Soon after, a trial was instituted against one of the order in France by some of the merchants concerned in speculations at Martinique, which had involved the society in debt. On this trial the *institute* of their order, and their registers were examined, and found to contain principles and doctrines subversive of monarchy, and of the interests of the kingdom. It was consequently decreed to suppress the order of Jesuits in France. On the year following, the King of Portugal was assassinated, and it was resolved to expel the Jesuits from that kingdom.

This was followed by their expulsion from Spain and Naples, in 1767, and in 1773 Pope Clement (Gangarelli) XIV. totally abolished the society.

They were banished from America soon after, and the *cure* of the native tribes they had converted, was transferred to priests of other orders, but chiefly to the Franciscans, and the government was placed in the hands of civil officers.

On their expulsion from the territories on the banks of the Paraná, there were discovered, in thirty settlements alone, no less than 769,590 horses, 13,900 mules, and 271,540 sheep.

The *presidios*, or garrisons of this province, when under Spanish rule, were nineteen in number, without counting the capital, in which was a body of 350 guardsmen, as well of infantry as of horse.

Besides these, there were boats which plied on the rivers to impede the passes to the infidels, or to surprise and cut off their retreats.

Along the Paraná, and along the Paraguay, north to Angostura, the country is low, marshy, and without fuel. Wooded marshes occur further north. The greater part of the interior country is hilly, and in some parts mountainous. The hills are covered with forests; the valleys and plains are nearly destitute of wood, and afford excellent pasture-ground. The climate is salubrious and temperate. Its rainy season lasts from March to June. The productions are numerous. The Yerba-maté, or Paraguay tea, was, it is stated, exported formerly to the amount of 8,000,000 lbs. Great quantities of timber are, however, floated down to Buenos Ayres. Tobacco, sugar, and cotton have been also exported. The indigo-plant and caoutchouc-tree grow wild. Exclusive of the navigable Paraguay and Paraná rivers, the River Tibiquari, which traverses the southern districts, is navigable in the greater part of its course.

THE Population of Paraguay, according to Azara's Work, published in 1809.

NOTE.—The letter (c) indicates city; (t) town; (p) parish; (s) settlement of Indians; (m) settlement of mulattoes or people of colour.

The state of Paraguay is situated on the eastern bank of the River Paraguay, which, with the Bermejo, flows into the Paraná. Aided by Buenos Ayres, Paraguay was freed from Spanish domination.

ASUNSION, the capital, situated near the banks of the Paraguay, has about 10,000 inhabitants, and a considerable trade in the produce of the country. Villa Real de Concepcion, with 4000 inhabitants, lies further north on the Paraguay, and is the place to which the produce of the forests of Yerba-Maté is brought: these forests cover the hills from sixty to eighty miles east of the capital.

The more recent accounts of Paraguay, by Robertson and others, describe the state of cultivation superior to that of the neighbouring Argentine states. White-washed cottages were, says Mr. Robertson, frequently seen among the trees, and around them were considerable fields of cotton, yucca, and tobacco. Indian corn, and sugar-cane, were frequently seen in the vicinity of the farm-houses; and there was abundance of wood and prickly pears, with the latter the cultivated country and paddocks are well provided. The dictator possessed nearly half the country; the savannah, pasture-lands and forests, the estates of the Jesuit missions, and other corporate religious bodies, and many country-houses and farming-establishments, were confiscated and seized by him in the name of the state. It is but justice to say that he sedulously improved all these properties, and rendered them productive. On some parts large cattle and horse farms

were established. He let others at moderate or nominal rents, subjected to be well cultivated. His cavalry was supplied by the pasture farms. Monthly reports of the farms were invariably demanded and received by him. He extended the agricultural operations far beyond annual gatherings of *maté*, or tea, the culture of some tobacco, sugar-cane, and yucca. In 1820 the plague of locusts overran and destroyed eighty leagues of circuit. To avert famine, he compelled the farmers to sow a second crop; the harvest of which was most abundant. By despotic regulations, he extended his agricultural improvements over the whole country. Rice, maize, cotton, culinary vegetables were grown; and the breeding of cattle and horses was extensively promoted. Paraguay tea is as much used in Chile, La Plata, Peru, and Brazil, as China tea in England. He also compelled them to establish manufactories. His government was absolute, though the whole was nominally republican. He allowed of no public debt. If the war between Buenos Ayres and Monte Video were ended;—if those countries were tranquillised, the period will have arrived when a very lucrative trade may be carried on with the fertile region of Paraguay and the countries drained by the Paraná and its affluents. In his day Francia may have, as a dictator, prepared this state for future prosperity.

CHAPTER XVI.

MONTE VIDEO, OR URUGUAY.

THE republic of *Uruguay*, or *Banda Oriental*, extends from the northern coast and banks of the La Plata, to the southern boundary of Brazil. It is but imperfectly explored from the Atlantic to the River Uruguay. This state extends on the west, along the Uruguay River about 300 miles, and on the Atlantic for about 200 miles. The average width, from east to west, exceeds 230 miles. Estimated area 69,000 square miles:

Uruguay has generally an undulating fertile soil, with occasional broken interruptions, and is almost destitute of forest trees. The climate is temperate; it never freezes. Rain falls abundantly during winter, but seldom in summer. Cultivation is neglected for pasturage. Cattle and horses form the wealth of the inhabitants. The articles of export are hides, skins, hair, horns, and jerked beef. Sheep breeding and rearing is almost entirely neglected.

In a Spanish work, which we have quoted, Monte Video is asserted to be favoured by nature, as if it had been selected for the display of fertility and beauty, and not less important on account of its geographical situation, at the mouth of the River La Plata, forty leagues distant from the capital city of Buenos Ayres. Its climate, which has sensibly improved during the last forty years, is temperate and humid; but as that quality is moderated by the invariably dry land winds from the north-west—commonly called *passageros*, because the pass through the open plains of Buenos Ayres—and by its proximity to the ocean, the temperature of its atmosphere is the most healthy possible. In the year 1810, that province numbered a population of from 60,000 to 70,000 souls, including that of the city, which was not less than 20,000. In 1825, however, it scarcely contained from 40,000 to 50,000, that is, 10,000 in the city, and the remainder in the country. There are many inhabited places in it: as, Maldonado, Colonia, Santa Lucia, Camelones, San Jose, San Carlos, Soriano, and Cerro

Largo, which are all towns; and the villages are Toledo, Pando, Rocha, Penarol, Piedras, San Salvador, Minas, Florida, Porongos, Colla, Bacas, Nivoras, Espinilla, Mercedes, Paisandù, and Hervidera. The decrease of population was occasioned first by the war with Spain, which in that territory was carried on as in no other part of the united provinces; by the civil war which raged there, during the revolution against Spain; and also by the domination of the Portuguese, or Brazilians, from which, being universally detested, the natives have fled in great numbers, emigrating to the other provinces. Monte Video was peopled, little more than about a century ago, by a colony sent from Buenos Ayres. At that time the country was occupied by a multitude of Indians, of whom now only remain the very few who live in the remote parts, known by the name of *Charrecas*. The new colonists found the country abounding with vicuna. Since that time the soil, fertile in all parts, even in the mountains with which it abounds, appears to have been used particularly for grazing, its cattle having continued all along to be the staple branch of the commerce of Monte Video; not only by reason of the exportation of vicuna and horse-hides, but also of salted meat and tallow. Monte Video at one time possessed thirty-three establishments for curing meat, each of them killing at least one hundred head of cattle daily, without that consumption being felt in regard to the vicuna, the multiplication of which race is assisted there by an infinite variety of natural circumstances. Nearly the whole country abounds in excellent pastures, of excellent quality, and fertilised by the irrigation of rivers, rivulets, and springs. At each step the traveller finds himself meeting with streams of pure water, the scenery presents a constant succession of hills, eminences, meadows, wilds, rugged defiles, and mountains. The principal rivers are, the *Uruguay*, *Negro*, *Ybiqui*, *Cebollati*, *Yi*, *Santa Lucia*, *Guegisay*, *Diaman*, *Arapci*, *Guarey*, *Olimar*, *Pardo*, *Tacuari*, *Yguaron*, and *Tacuarembò*. The currents of these rivers are formed by countless streams, "many of them very considerable, which run in all directions, excepting an elevated ridge of land which crosses the whole province, and is called *Cuchilla grande*. Almost all these rivers might be made navigable through the greatest part of their course. Those that are now navigated are the *Uruguay*, *Negro*, *Cebollati*, and *Santa Lucia*."

Monte Video, situated on the north shore of the Rio de la Plata, was founded near its mouth by order of Field-marshal Don Bruno de Zavala, in 1726. "Until 1807 it was a small place, having only one parish and a convent of the order of San Francisco. It had once a house of Jesuits. It is situate on a lofty spot, upon a bay. It has a citadel or castle, which is badly constructed, with four bulwarks and some batteries for its defence—the same is the residence of the governor. The town, which is well fortified with a strong wall and sufficient artillery, is inhabited by more than 10,000 souls, amongst whom are some rich and noble families. The climate is excellent, cheerful, and healthy, the soil fertile and abounding in vegetable productions, and flesh and fish are so plentiful as to cost almost nothing. Its principal commerce consists in the hides of cattle, and these are killed merely for the above perquisites. It is 111 miles east-south-east from Buenos Ayres, in latitude 34 deg. 50 min. 30 sec. south, and longitude 56 deg. 16 min. west." Such is the description of Alcedo.

Few places in Spanish America have experienced a greater change in political consequence and physical energies, since the time Alcedo wrote, than Uruguay. Independently of its wars with Buenos Ayres, it has been rendered famous by the English expedition which visited the Rio la Plata in 1806. It was for some little time in possession of the British troops, and finally evacuated at the beginning of September, 1807.

The town of Monte Video, according to Mr. Mawe, is tolerably well built,

standing on a gentle elevation at the extremity of a small peninsula, and is walled entirely round—

"Its population amounted in 1820 to between 15,000 and 18,000 souls. The harbour, although shoal, and quite open to the *pamperos*, is the best in the Rio de la Plata; it has a very soft bottom of deep mud. When the wind continues for some time at north-east, ships drawing twelve feet water are frequently aground for several days, so that the harbour cannot be called a good one for vessels above 300 or 400 tons."

There are but few capital buildings; the town in general consists of houses of one story, floored with brick, and provided with very poor conveniences. In the square is a handsome cathedral, awkwardly situated; opposite to it is an edifice divided into a town-house or *cabildo*, and a prison. The streets having no pavement, are clouded with dust or loaded with mud as the weather happens to be dry or wet. In seasons of drought the want of water is a serious inconvenience the spring which principally supplies the town being two miles distant.

Provisions are cheap and abundant. Beef is plentiful, and, though rarely fat or fine, makes excellent soup. *The pork is not eatable.*

The inhabitants of Monte Video, particularly the Creolians, are described as humane and well-disposed, *when not actuated by political or religious prejudices.* Their habits of life are indolent and temperate. The ladies are generally affable and polite, fond of dress, and neat and cleanly in their persons; they adopt the English or French fashions at home, but go abroad usually in black, and always covered with a large veil or mantle. At mass they invariably appear in black silk, bordered with deep fringes. They delight in conversation, are vivacious, and very courteous to strangers.

The chief trade of Monte Video consists in hides, tallow, and dried or jerked beef: the two first are exported to Europe, and the latter is sent to the West Indies, especially to the Havannah. The coarse copper from Chile in square cakes, is sometimes shipped here, as well as *maté*, or tea of Paraguay, the infusion of which is as common a beverage in these parts as tea is in England.

The climate of Monte Video is humid. The weather in the winter months (June, July, and August), is at times boisterous, and the air in that season is generally keen and piercing. In summer the serenity of the atmosphere is frequently interrupted by thunder-storms, preceded by terrific lightning, which frequently damages the shipping,—and followed by heavy rain, which sometimes destroys the harvest. The heat is oppressive, and is rendered more so to strangers by the swarms of mosquitoes, which infest every apartment.

The town stands on a basis of granite. The high mount on the opposite side of the bay is crowned with a lighthouse, and gives name to the town.

Barriga Negra is distant about 160 miles north-east from Monte Video, about 120 from Maldonado, and ninety from the town of Minas. The surrounding country is mountainous, well-watered, and partly wooded; the banks of the streams are covered with trees, rarely, however, of large size; for the creeping plants, interweaving with the shoots, check their growth and form an impenetrable thicket. In this district are the great breeding estates, many of which were stocked with from 60,000 to 200,000 head of cattle. These are herded principally by Peons from Paraguay, who live in hovels at convenient distances. Ten thousand head are allotted to four or five Peons, who collect them every morning and evening; and drive them once or twice a month into pens where they are kept for a night. The cattle by this mode of management are tamed; a vicious beast is never seen among them. Breeding, alone, is attended to; neither butter nor cheese is made, and milk is scarcely known as an article of food. The constant food is beef, eaten generally without bread, and frequently without salt. This habitual subsistence on animal food would probably engender diseases, were it not corrected by regularly drinking their favourite *maté*.

Agriculture.—There is abundance of excellent clay, and plenty of wood near the margin of the rivers, yet it is rare to meet with an enclosure, even for a kitchen-garden, much more so for a corn-field. They generally choose the grounds for tillage by the bank of a rivulet, so as to have one side or sometimes two sides bounded by it; the remainder is fenced in the most clumsy manner. Ploughing is performed by two oxen yoked to a crooked piece of wood about four inches in diameter, and pointed at the end. After the ground has been roughly broken up, wheat is sown, without any attempt to cleanse it from noxious seeds. While it grows up, wild oats, poppies, and other pernicious weeds grow among it in luxuriance. Indian corn, beans, melons, &c., are all treated in a similar way. The wheat is cut down with sickles and gathered into sheaves. A circular pen of from forty to sixty yards in diameter is then formed with rails and hides; in the centre of this enclosure is placed a large quantity of wheat in the straw. The pile is so formed as to have the ears on the outside. A small quantity is pulled down towards the circumference of the circle, and a herd of about twenty mares is driven in, which, being untamed, are easily frightened and made to gallop round. At this pace they are kept by means of whips for four or five hours, until the corn is trodden out of the ears, and the straw completely broken up. Another parcel of sheaves is then pulled down, and a fresh herd of mares is let in, and this operation is repeated until the whole heap is threshed, and the straw is broken into chaff. In this state it is left until the wind happens to rise, and then it is winnowed. It is sewed up in hides, and sent to the sea-ports, where biscuit is baked.

The climate and soil are favourable for the growth of grapes, apples, peaches, and every species of fruit belonging to the temperate zone; but these are not generally cultivated. The potato would thrive abundantly, but the people remain averse to improving their means of subsistence, and seem to wish for nothing beyond the bare necessities of life. The Peons, brought from Paraguay in their infancy, grow up to the age of manhood in a state of servitude, uncheered by domestic comfort; at that period they generally wander in search of employment toward the coast, where money is in greater plenty. They are for the most part an honest and harmless race, though as liable from their condition to acquire habits of gambling and intoxication, as the higher classes: many of whom fall victims to those vices.

Among the many natural advantages which many parts of Uruguay possesses, are the frequent falls in the brooks and larger streams, which might be converted to various mechanical purposes, if the population were numerous and better instructed.

CHAPTER XVII.

THE RIVERS PLATA, PARANA, PARAGUAY, URUGUAY, AND THEIR TRIBUTARIES.

WERE the regions drained by the River Plata, and its great and numerous tributaries, populously settled by an enterprising people, the inland navigation which communicates with the rich soils and products of those vast and extensive regions of the Argentine republics, would render these countries among the most prosperous and powerful in the world.

The PLATA is one of the largest known rivers in South America, after the

Amazon. It was discovered by Juan Diaz de Solis in 1515; who navigated it as far as a small island in latitude 34 deg. 23 min. 30 sec. south, and who, having seen on the shores some cabins, had the boldness to disembark with ten men; when they were all put to death by the aborigines. Five years afterwards, Sebastian Cabot, who, from neglect, passed from the service of the English to that of the Spaniards, was sent to discover the Strait of Magellan. But, finding himself impeded in his views by the disobedience of his crews, was under the necessity of entering the River Plata, which he navigated as far as the island discovered by Solis, and to which he gave the name of San Gabriel. Seven leagues above this island he discovered a river which he called San Salvador, and another at thirty leagues' distance, which the natives called Sarcana; where he built a fort. He then pursued his voyage as far as the conflux of the rivers Paraná and Paraguay, and leaving the former to the west, entered by the second, and had a battle with the Indians, in which he lost twenty-five men; but succeeded in routing them, taking from them treasures of silver, which they had brought from Peru; and, supposing that there was an abundance of this metal in the territories washed by the river, called it Rio de la Plata (River of Silver); whereby it lost the name of Solis, first given it by the discoverer.*

This river receives in its extensive course the water of various other large rivers. It is subject to inundations for many leagues from its banks, fertilising the land in the same manner as the Nile. The distance from the conflux of the Paraguay and Paraná to its mouth, is about 200 leagues by the course of the river. It is interspersed with beautiful islands, and is navigable for large vessels.

The Rio Plata is at its mouth about 150 miles wide; from Cape San Antonio on the south, to Point Negro on the north. From thence to the junction of the Uruguay, it preserves its name, being afterwards called the Paraná. Although the whole of it is navigable, it has many shoals and rocks. Between Point Piedras on the south, and Point Yeguas on the north, it is fifty-three miles wide. The coloured water which it brings down is often visible in the Atlantic about 100 miles from its embouchure. The estuary of the Plata is generally shallow, and the navigation extends along the southern shores, but the channel along its northern shores is sufficiently deep for ships drawing about twenty feet, as far as opposite Buenos Ayres, on its southern shore. Vessels drawing more than sixteen feet of water can seldom approach nearer the town than seven or eight miles; smaller vessels enter the inner roads to within about two miles of Buenos Ayres. The navigation of its gulf, though intricate among the extensive shoals, may hereafter be rendered easy by the aid of steam tug-boats. The tides are perceptible as far as Buenos Ayres, but between Point Las Piedras and Point Yeguas the water is generally fresh.

The PARANÁ rises in the province of Minas Geraes to the south of the city of San Joas del Rey, in some lofty sierras, in Brazil, and flows a course for the estimated distance of more than 1000 miles, receiving innumerable tributaries, many of them navigable from the north, west, east, and south.

At about 300 miles from its mouth two falls impede its navigation. The country through which it flows is temperate and very fertile.

When the Jesuits were expelled, there were in the thirty settlements of the

* Another version of the origin of the name is given by the Spaniards, who say that Martin de Zousa, holding the *captainship* of St. Vicent, furnished Alexo Garcia, a Portuguese, with an escort to explore the wilds to the west of Brazil. By the route of the Tieté, he reached the Paraguay, which he crossed, and penetrated into the interior. He returned, it is said, loaded with silver, and some gold; he halted on the Paraguay, waiting for his son, with some of his people, and sent at the same time to Brazil an account of the discovery. He was surprised by a body of Indians, who killed him and took his son prisoner. The following year, sixty Portuguese, who were sent in search of Garcia, were also massacred. The Spaniards who first settled on this river, seeing so much silver amongst these Indians, and supposing it to be the produce of the country, called the river La Plata.

Paraná and Paraguay, 769,589 horses, 13,905 mules, and 271,537 sheep. The government, arts, and manufactures, which were instituted in this territory by the Jesuits were considered by the Spaniards as a problem not to be solved: whether it should prove the perfection of a republic, or that it should be looked upon as a tyrannical despotism eager only for its own interests, and the establishment of absolute power. (See the "*Christianismo felice*" of Muratori, and the collection of documents for the extermination of the Jesuits, printed by order of the Spanish government.)

The Paraná, which the first discoverers considered as the chief, on account of its abundant waters, joins the Paraguay in latitude 27 deg. 16 min.; and their united streams take the name of the Paraná.

The Rio Paraná becomes navigable for vessels of 300 tons' burden at the island of Apipé, about 120 miles above its junction with the Paraguay. Below this junction it is studded with low islands, covered with wild orange-trees and various trees and shrubs: the deepest channel has always from two to three fathoms of water. Before its junction with the Rio Uruguay, it separates into numerous anches, which form a delta. Most of these channels are navigable for boats; that called Parana Guazu has seldom less than two fathoms and a half of water, and that of Las Palmas is the next deepest to Guazu. This river and most of its confluent bring down from the countries within the tropics to the higher latitudes a great volume of water, which inundates the low districts along its banks from February to May. The waters rise in the end of December, and increase gradually to the end of April; they descend to their lowest point in July; along the lower part of the river the inundation rises about twelve feet above the lowest water level, and leaves a slimy deposit which enriches the soil.

The Paraguay River gives its name to the state. It was first navigated by Sebastian Cabot in 1526. It rises in about 13° south latitude.

This great river, from authorities relied on by Mr. Mawe, flows

"In a southern course of 600 leagues before it enters the ocean under the appellation of the Rio de la Plata. The heads of the Paraguay are 270 miles north-east from Villa Bella, and 164 miles north from Cuiaba, and divided into many branches, forming complete rivers; which, as they run south, successively unite and form the channel of this immense river, which is immediately navigable. To the west, a short distance from the main source of the Paraguay, is that of the Syptuba, which discharges on its west bank, in latitude 15 deg. 50 min., after a course of sixty leagues. In the upper part of this river, and near its west branch, called the Jurubamba, was formerly a gold mine, which was worked with considerable profit; but the superior advantage derived from others subsequently explored in Matto Grosso and Cuiba, caused it to be abandoned, and its site is not now known with certainty. The little River Cabaral, also auriferous, enters the Paraguay on the west side, three leagues below the mouth of the Syptuba. On the banks of the latter lives a nation of Indians, called Barbados, from the distinction peculiar to themselves, among all the Indian nations, of having large beards."

The confluence of the Jauru with the Paraguay was considered a point of importance, as guarding the great road between Villa Bella Cuiaba and the intermediate establishments, and in the same manner commanded the navigation of both the rivers, and defended the entrance into the interior of the latter *captainship*. The Paraguay from this place has a free navigation upwards, almost to its sources, about seventy leagues distant, with no other impediment than one large fall.

The boundary mark, which was placed at the mouth of the Jauru by the Portuguese, was, and may, if not destroyed, be still, a pyramid of beautiful marble, brought to this distant point from Lisbon. It bore inscriptions commemorative of the treaty between the courts of Spain and Portugal, by which the respective territories were defined.

The chain of mountains which extends from the sources of the Paragua, near its east bank, border the river opposite the mouth of the Jauru, and are terminated seven leagues below it by the Morro Excalvado. East of this point all is marsh; and nine leagues below it there flows into the east side of the Paragua a deep river, called Rio Novo, discovered in 1786. The most distant sources of this river are the rivulets of Santa Anna and Bento Gomez. About latitude 17 deg. 33 min., the western banks of the Paragua become mountainous at the north point of the Serra da Insua, which, three leagues to the south, makes a deep break to form the mouth of the Lake Gaiba. Six leagues and a half below the mouth of the Gaiba, and opposite the mountainous bank of the Paragua, is the mouth of the St. Lourenço; twenty-six leagues above this the River Cuiaba enters its western bank: these two rivers are of great length. A tributary, the Itiquira, has been navigated to its heads, from whence the canoes were dragged over land to the Sucuriu, which falls into the Paraná. The tributaries Itiquira and Sucuriu were found to have fewer and smaller falls than the Jaquari.

The navigation to the town of Cuiaba by the river of that name, from its above-mentioned confluence, is short and easy. Three leagues above this place the Guacho-uassu enters the Cuiaba by its eastern bank, and on the same side, seven leagues further, the Guacho-mirim. From this point the river winds in a north-north-east direction, eleven leagues to the Island of Pirahim, and from thence makes a large bend to the east, receiving numerous streams, and passes the town of Cuiaba, which is situated a mile to the east of it. This town is ninety-six leagues to the east of Villa Bella, and the same distance by water from the confluence of its river with the Paragua. It is large, and, together with its dependencies, contained, in 1807, 30,000 souls. It was then well provided with meat, fish, fruits, and all sorts of vegetables, at a cheap rate. The country is well adapted for cultivation, and has mines. They were discovered in 1718, and were estimated to produce annually, up to 1805, above twenty *arrobas* of gold of extremely fine quality.

Twenty leagues south-west of the town of Cuiaba is the settlement of St. Pedro del Rey, the largest of all the adjacent settlements, and contained, before the reign of Francia, about 2000 inhabitants. The River Cuiaba has its sources 190 miles above the town, and its banks have been cultivated along the greater part of its extent, including fourteen leagues below the town. Four leagues below the principal mouth of the River Porrudos, the Paragua is bordered by the mountains that separate it from Gaiba on its west bank, and in this place they obtain the appellation of *Serra das Pedras de Amolar*. This is the only part said not annually to be inundated by the floods of the river.

From the Dourados, the Paragua runs south to the Serras of Albuquerque, where it touches directly on the north point, on which is situated a village of that name. From Albuquerque the Paragua turns to the south-west. It skirts its Serras, which terminate at the end of six leagues higher up in the Serra do Rabicho, opposite which, on the north bank of the river, is situated the lower south mouth of the Paragua-mirim. This is an arm of the Paragua, which, terminating here, forms an island fourteen leagues in length from north to south: it is the usual channel for canoes during inundations. From the mouth of the Paragua-mirim the river takes a southerly direction to the mouth of the Taquoari, which was navigated annually by flotillas of canoes and other craft, from St. Paul's to Cuiaba, and even as far as the Register of Jaura.

The Embotetieu enters the River Paragua five leagues below the mouth of the Taquari, and on the same side. It is now called Mondego, and was formerly navigated by the traders from St. Paul's, who entered by the Anhandery-uassu, the south branch of the Pardo. On the north bank of the Mondego, twenty leagues above its mouth, the Spaniards founded the city of Xerez, which the

Paulistas destroyed. One league below the mouth of the Mondego there are two high insulated mounts, fronting each other on the Paraguay; at the extremity of the southern declivity of the mount on the western side, near the bank of the river, was stationed the garrison of New Coimbra, founded in 1775; it was the last and southernmost Portuguese establishment on the great Paraguay. Eleven leagues to the south of Coimbra, on the west side of the Paraguay, is the mouth of Bahia Negra, a large sheet of water of six leagues in extent, being five leagues long from north to south: it receives the waters of the wide-flooded plains and lands to the south and west of the mountains of Albuquerque. At this bay the Portuguese possessions on both banks of the Paraguay terminated. From thence the river continues to latitude 21 deg., where, on its western bank, is situated a hill known to the Portuguese by the name of Miguel José, which was crowned with a Spanish fort with four pieces of artillery, called *Bourbon*. Three leagues above this the little River Guirino falls into the Paraguay on the eastern side. Nine leagues to the south of the above fort, and in latitude 21 deg. 22 min., are other mountains on both sides the Paraguay, which command this river. Here terminate those extensive inundations to which both banks of the Paraguay are subject; they commence at the mouth of the Jauru, and to this point cover an area of 100 leagues from north to south, and forty in breadth at their highest floods, forming an apparent lake, which geographers of former days, as well as some moderns, have termed the Xarayes. During this inundation, the high mountains and elevated land which it encloses appear like superb islands, and the lower grounds form a labyrinth of lakes, bays, and ponds, many of which remain after the floods have subsided. From this place the banks downward are in general high and firm, particularly the eastern or Portuguese side. In latitude 22 deg. 5 min., the Galban, a considerable river from the west, empties itself into it.

Between the Paraguay and the Paraná there runs from north to south the Amanbay chain of mountains; they terminate to the south of the River Iguatimy. From these mountains rise all the rivers which, from the Taquari south, flow into the Paraguay, and from the same chain also proceed many other rivers, which, taking a contrary direction, flow into the Paraná; one of them, and the most south, being the Iguatimy, which has its mouth in latitude 23 deg. 47 min., a little above the Seven Falls, or great cataract of the Paraná. This cataract is sublime. It appears from below as six rainbows. The Iguatimy has its sources ten leagues above this place, among high and rugged mountains. The River Xexuy enters the Paraguay on the east side in latitude 24 deg. 11 min., twenty leagues below the Ipane, another small river, called the Ipane-mirim, intervening.

A river of such vast magnitude as the Paraguay, in a temperate and salubrious climate, abounding with fish, bordered by extensive plains and high mountains, intersected by so many rivers, bays, lakes, and forests, must naturally have drawn many of the Indian nations to inhabit its banks; but soon after the settlement of the new continent, the incursions of the *Paulistas* and Spaniards dispersed and destroyed numerous tribes; the Jesuits removed many thousands to their settlements. Other tribes fled to countries less favoured, but more secure by being farther distant, and more difficult of approach. The emigration of one nation to districts occupied by others, created inveterate and sanguinary wars among them, which soon reduced their numbers. The tribes, or rather remnants of tribes, still settle or wander on the borders of the Upper Paraguay.

From the River Xexuy, downwards, the Paraguay takes its general course south for thirty-two leagues to the city of Asunción, the capital of Paraguay.

Six leagues below Asunción, on the west side of the Paraguay, the River Pilcomayo enters that river by its first mouth; its second is fourteen or sixteen leagues lower. In this space some other smaller rivers enter on the east side,

and amongst them the Tibiquari, on an arm of which, twenty leagues south-east from Asuncion, is Villa Rica, a town owning much property in cattle on its extensive plains. The River Vermejo, or Bermejo, enters on the west side of the Paraguay, in latitude 26 deg. 45 min. Another great river, the Salado, flows in from the north-west, and joins the Paraguay or Paraná at Espiritu Santo, in latitude 32 deg. 30 min.

The Rio Uruguay rises in the Serra Cubatao, hardly more than twenty miles from the sea, and runs for a considerable distance, first west and then south-west. After its junction with the Ibicuy and Rio Mirinai, which brings down the waters of the Laguna de Ybera, it turns southwards, and in that direction reaches the Rio de la Plata after a course of about 800 miles. The navigation is interrupted by numerous falls, which are only passable when the waters are at their greatest height during the periodical floods, or by portages in the dry season. Two considerable cataracts occur below 31 deg. south latitude, only a few miles from each other; they are called Salto Grande and Salto Chico. The Salto Grande consists of a rocky reef, running like a wall across the bed of the river; during the floods it is passable in boats, but at low water it may be crossed on horseback. The largest of the affluents of the Rio Uruguay is the Rio Negro, which joins it from the east, and runs upwards of 250 miles. It is navigable for a considerable distance, and traffic is carried on by it with the country near Lake Mirim.

From Cape Santa Maria, on the Atlantic, to the Island of Apipe, on the Paraná, the distance, about 1250 miles, is navigable, without any other reef than the English Bank (*Banco Ingles*), which would cease to be dangerous if the navigation were attended to. In the whole course of the Paraná it is asserted that there is not a rock: its bottom is clay and fine sand; some banks and shallows are here and there met with, but a channel is left at all times for the passage of vessels; and near the banks there is a greater depth than in the middle of the channel. The Paraguay is also asserted to be equally adapted for navigation.

The Pilcomayo and Bermejo, or Vermejo, which flow into the Paraná, both rise in Peru; the first near the city of Potosi, and the second in the vicinity of Tarija. They run at first with considerable impetuosity from the heights whence they descend; but through the flat country, they flow in a tranquil and majestic course. They have numerous windings, on account of the want of fall in the ground of the Gran Chaco through which they run, and which is the most level tract of all South America. The rivers which intersect this vast region are large; they tend to fertilise it, inasmuch as the flatness of the lands facilitates the inundations during the risings of the rivers down to the Paraguay, into which they disemboogue themselves, after watering the lower territory.

The Spaniards of the sixteenth century founded a city on the right bank of the Pilcomayo, and called it La Asuncion, to facilitate, by means of the navigation of the river, the transport of the productions and manufactures of that country. That city, as well as another, which they founded on the Paraguay, was destroyed by the Indians, and entirely abandoned by the Spaniards.

It is evident that all productions might be transported down to the Plata from Peru by means of the navigation of Pilcomayo and Bermejo.

The River Salado, which rises in the province of Salta, and unites itself to the Paraná, is another mighty navigable stream. The Gualeguay and the Negro are two more rivers, of the third class, navigable for many leagues.

The La Plata, Paraná, Paraguay, and their affluents, therefore, enjoy all the advantages possessed by the principal rivers of America for inland navigation and trade, and especially for steamboat navigation.

SECTION XVII.

STATISTICS OF THE SPANISH REPUBLICS

OF

SOUTH AMERICA.

CHAPTER I.

THE SPANISH COLONIAL SYSTEM.

WE have given, as far as can be ascertained, the statistics of Mexico and Central America. We have now to present, in as clear a form as our materials will allow, statistical tables and accounts relative to the trade, navigation, products, and finances of the South American Spanish Republics.

It has been already remarked that the spirit of the Spanish commercial system has descended to the republics. The same jealousy of foreigners and of foreign products is, also, still remarkable. In order to elucidate the commercial and fiscal system of the Spanish American Republics and their progress, we must sketch briefly that by which they were oppressed under Spain, and compare with it the systems, by which they, as separate governments, oppress themselves.

Spain, with absurd regulations, which embarrassed and ruined her colonial commerce, was unable to export, or manufacture the raw produce of her vast colonies,—and would neither permit them to be exported, or manufactured, by the colonists,—nor suffer foreigners to export them, and give in exchange to the colonists those articles that they most wanted. A contraband trade necessarily arose; and this illicit trade reduced the price of the products of those colonies to a wretched rate,—as their sale depended on the uncertain arrival of a greater or lesser number of smuggling vessels: which again, were exposed to the caprices, and interests, of those officers of the government, whose connivance they were obliged to purchase. Spanish colonial agriculture and commerce consequently languished; yet some colossal fortunes were acquired in two or three years by generals, intendants, and commissioners of customs.

CHAPTER II.

STATISTICS OF NEW GRANADA.

EXCEPTING as far as stated in the accounts hereafter of the exports of the precious metals, we have no details on which we can place any reliance of the former

trade of New Granada and Spain. As far as manufactures were concerned, a contraband trade of great extent was carried on from the British colonies.

Treaties of reciprocity have been negotiated with Colombia; which are still binding on New Granada, Great Britain, the United States, &c. The commercial tariffs and regulations have undergone various alterations.

REVENUE.

COMPARATIVE View of the Revenue of New Granada, in the Years 1844 and 1845, showing the Increase or Decrease thereof.

TARIFF DUTIES.

By the last decree or law which we possess, dated Bogata, the 24th of May, the duties on importation of merchandise by foreign vessels were based on the rate of *thirty per cent ad valorem*.

The duties on merchandise imported by national vessels, or vessels belonging to countries with which there are treaties of reciprocity, at the rate of twenty-five per cent *ad valorem*.

The produce of Venezuela and Lima, are treated much the same as New Granada products.

There is, however, a long tariff of specific rates, based upon, but which may add, or diminish, the general rates of twenty-five and thirty per cent.

ARTICLES FREE OF DUTY.

The following articles, unless specially rated in the present tariff, shall be admitted free of duty: viz., gold, silver, platinum in powder, bullion, and coin; machines and instruments for agricultural purposes, as, machines for cleaning, cotton-mills, sugar-mills, and sawing-mills, also all kinds of machinery and implements for the use of the mines; fire and all other engines; steam vessels; all machinery, &c., for the purpose of building and repairing houses, &c., and for clearing out harbours, docks, canals, and for spinning and weaving, and also all others that may be generally applicable to arts and manufactures; beaver and nutria skins; bee-hives; surgical instruments, and all kinds of preparations, and books, plates, &c., fit for medical science; lithographic types, &c.; books, bound and unbound, pamphlets, &c.; maps, paintings, statues, busts, medals, and collections of antiquities; domestic animals; seeds and plants for agriculture and garden purposes.

No duty shall be charged on merino wool, which may be imported previous to the 1st of January, 1858, nor upon tiles, &c., stone, bricks, and lime, planks and boardings, and sawn timber, fit for building, which may be entered at the Port of Rio Hacha, previous to the 31st of May, 1846, nor upon similar building materials, imported at the Port of Chagres, entered thereat previous to the 17th of March, 1850.

Carriages, and all other articles, entered for the use of foreign diplomatic agents, consuls, vice-consuls, &c., are exempt from the payment of import duties.

The importation of all descriptions of books, prints, &c. &c., which may be contrary to religion, or offensive to morals and decency, and injurious to the public good, is most strictly prohibited. But under this head are not included works and prints, &c., proper for anatomical study or for the fine arts.

The prohibition to import anise, and essences made from it, sugar, raw, &c., honey and molasses, coffee, cocoa, and indigo, does not apply to the ports in the provinces of Panama and Veraguas, specially legalised for importation. The forenamed articles may be there imported for consumption within those provinces—transit through the ports of Panama, Chagres, and Portobello—or for deposit at Panama or Portobello, subject always to the customary regulations affecting such transactions.

The prohibition to import cacao does not extend to the port of Tumaco; it may be there entered for consumption, within either that district or that of Barbacoas, paying an import duty of two *pesos* upon each quintal.

Should prohibited merchandise or goods be brought into any port within the republic, either in a national or foreign vessel, it shall be subjected to inspection by two competent authorities; the one named by the customs and the other by the captain or consignee of the vessel, and if the quantity of such goods shall be found to be *double* that which the above-named parties may consider as necessary for the use of the crew during the ship's passage, any quantity exceeding such requisite allowance shall be forfeited, and the captain shall be mulcted in a penalty of from 200 to 1000 *pesos*.

If the administrator of the customs shall suspect that the goods have been put down in the invoice at less than the true value in the port whence they were exported, he shall cause them to be valued at the prices which they would bear at the place whence they came, at the time of exportation; and if the value thus assessed should exceed the value in the invoice by twenty per cent, then fifty per cent shall be put upon the estimated value; and the duties shall be calculated and collected thereon: provided, however, when the estimated value as above shall not exceed the invoice value by twenty per cent, then the estimated value shall be considered the true value.

Monies.—Accounts are kept in pesos or dollars, of eight reals or twelve and a half cents; medias, or six and a fourth cents; and cuartillas or three and one-eighth cents. The dollar is also divided into halves and quarters.

Weights and Measures.—These are the same as those used in Spain.

The libra contains sixteen onza or ounces.

The quintal of 4 arrobas, 100 libras, which are equal to 101 44-100th lbs. avoirdupois.

Dry Measure.—The cahiz is equal to 12 fanegas; 1 fanega is equal to 12 celemines.

The celemine is subdivided into $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, &c. The fanega measures 3439 cubic inches English, and is equal to 1.599 bushels.

Liquid Measure.—1 moyo of wine contains 16 arrobas; 1 arroba contains 8 azumbras; 1 azumbra contains 32 cuartillas.

The arroba of oil contains 3.43 English gallons; the arroba of wine contains 4.245 English gallons.

Long Measure.—The foot is divided into 12 pulgadas = 11,128 English inches.

The palmo is equal to 9 " = 8 $\frac{1}{2}$ "

The vara 4 palmos = 33,384 " , "

DECREE of the 29th of April, 1844, respecting the exportation of the produce and manufactures of New Granada and loading of ships, &c.

ARTICLE I.—All the natural and manufactured products of New Granada may be ex-

ported free, and be conducted through all the ports maritime, inland, or fluvial, whether they be licensed for importation or only for exportation, without paying any national impost. Gold and silver in trinkets, bars or dust, or in whatever other natural form they may be extracted from the mines, even though they be mixed with some other extraneous matters, are alone excepted.

ARTICLE II.—The prohibition of the exportation of the precious metals, spoken of in the former article, does not extend to the port of Panama and Veraguas, as they may be freely exported from them, whether the product of mines which are worked there or importations for circulation, for transit or deposit.

ARTICLE III.—Foreign goods and merchandise which may be imported for consumption, and upon which the fiscal dues have been paid, or properly secured, may be re-exported without paying any export duty whatever.

ARTICLE IV.—Before a vessel can commence to load, the express permission of the custom house is required, which shall be granted for the term which the chief officers thereof may think convenient.

ARTICLE V.—The permission being given, a new search visit shall be made, to ascertain if the vessel be in ballast or if she only contain the goods, which at the time of the entry-visit the captain declared destined to other ports, or whether there be a perceptible diminution of the stores or provisions for the crew, or in the tackle, sails, and other articles of the vessel's stock.

ARTICLE VI.—The loading of every vessel shall be attended and inspected by the custom-house officers.

ARTICLE VII.—Natural or manufactured articles of the country cannot be exported, nor can foreign goods, which have been imported, be re-exported, without the knowledge and permission of the custom-house. For this purpose there shall be presented two *polices* or invoices of equal value, expressing in a detailed manner the goods intended to be exported, and the foreign port to which they are bound. These invoices must be signed, by the exporter. The custom-house shall retain one, and on the other shall be put the licence as soon as the effects have been examined.

ARTICLE VIII.—A permit is also requisite from the custom-houses in order to ship stones for ballast, and pearl oyster shells from the islands of Panama and Veraguas in the Pacific Ocean.

ARTICLE IX.—Natural or manufactured goods of the country, which are to be exported, must be examined before they are shipped by the heads of the custom-house, or by the officers of the coast-guard.

ARTICLE X.—In order to examine foreign merchandise about to be re-exported, it is strictly required that the goods be conveyed to the warehouses of the custom-house, unless they are inflammable articles, or such as can be so easily inspected as not to require, a minute examination, but one which may be made without the said warehouses.

ARTICLE XI.—The personal effects, which have to be embarked, as well as the stores, provisions, and other articles carried on board for consumption during the voyage, shall also be examined and inspected by the guard, in order to prevent the shipment for a foreign country of precious metals, in contravention to the prohibition.

ARTICLE XII.—Every vessel, as well national as foreign, which desires to go to load national effects or produce, at a port licensed only for exportation, must previously obtain a licence from the collector of customs of any one of the ports licensed for importation, but which cannot be granted without the consent of the first political authority of the place.

ARTICLE XIII.—Licence shall not be granted to any foreign vessel, which may have on board or be destined to receive foreign goods, whether the import duties have been paid upon them or not, but it shall be conceded to such as be in ballast or have on board national effects for exportation, and desire to proceed to the above-mentioned ports to complete their cargoes.

ARTICLE XIV.—Licence shall be granted to national vessels whether they be in ballast, carry national effects for exportation or consumption, or foreign goods to be dis-

charged in the port of exportation, provided always that the import duties thereon have been paid or duly secured.

ARTICLE XV.—Upon the arrival of a national or foreign vessel in the ports, authorised only for exportation, that have a permit to export effects of the country, the chief of the coast-guard shall visit the said vessel in the act of entering, shall see if she is in ballast or laden. In the latter case he shall require the register as also the manifests of invoices, which ought to bear the pass of the controller of the custom-house who gave the licence. If the effects are destined for the same port, which can only happen when the vessel is a national one, they shall be disembarked and examined with the formalities prescribed in regard to ports of importation. If they are destined to be exported to foreign countries, they shall be examined abroad, and compared with the registers, manifests, or invoices.

ARTICLE XVI.—The exportation of national effects and produce through the ports licensed only for exportation, shall be carried into effect with the same formalities and according to the rules established in the present law for the exportation of the same effects through the ports licensed for importation and exportation.

ARTICLE XVII.—In the maritime ports of import and export, the entrance of vessels which come with the view to complete their cargo, and have on board foreign goods, the importation of which is prohibited, shall be permitted; they must present the manifests and invoices of the said goods.

ARTICLE XVIII.—The loading of a vessel being completed, and the vessel being duly despatched by the custom house, and by the captain of the port where there exists one, it must sail immediately, and not be allowed to anchor again and remain in the port or its neighbourhood unless on account of stress of weather, or other urgent and unforeseen necessity.

ARTICLE XIX.—A report shall be drawn up of the despatch of each vessel, which shall contain, first, information of the name of the vessel and of the nation to which it belongs, the name of the captain who commands it, the number of tons measurement, and the port to which it proceeds; second, the account of the search visit; third, of the permission to load; fourth, of the registers or invoices of the embarked effects, which remain in the custom-house; and fifth, and lastly, of that in which any thing may have been declared contraband, if any such there be.

ARTICLE XX.—The precious metals, the exportation of which is prohibited, which may have been embarked, may be in the act of shipment, or on which an attempt to embark or convey may be made, and all the effects and merchandise which may have been embarked, in the act of being embarked, or to embark or convey which an attempt may be made, without permission from the custom-house, or in places not appointed for that purpose, or at hours different from those specified for shipments, shall incur the penalty of forfeiture, as well as the beasts of burden, carriages, or vessels employed in the commission of or attempt at fraud.

ARTICLE XXI.—The vessel shall incur forfeiture also when her master, or mate supplying his place, receives on board any quantity of precious metals, the exportation of which is prohibited.

ARTICLE XXII.—*When, by the visits mentioned in the fifteenth article, a foreign vessel shall be found to contain merchandise of foreign production, which exceeds in amount those provisions and other articles which are considered necessary for the vessel's stock and the consumption of the crew, the vessel and all that belongs to it shall incur the penalty of confiscation.*

ARTICLE XXIII.—If, on the visit at sailing, the said necessary effects should be found to have diminished, the captain shall be liable to the following penalties: if the decrease amount to a hundred dollars, value of the effects at the current price in the town, he shall pay a fine of fifty dollars; if the increase be from one hundred up to five hundred dollars, the fine shall be two hundred dollars; and from five hundred dollars and upwards, the vessel and every thing that belongs to it shall be confiscated.

DECREE.

Of Ports qualified for Import and Export Traffic.—The ports qualified for import and export trade in the Atlantic Ocean, are declared to be those of Rio Hacha, Santa Martha, and Cartagena, in the provinces so called; as are also those of Portobello and Chagres, in the province of Panama, and that of Las Bocas del Toro in that of Veraguas. In the Pacific Ocean, that of Tumaco in the province of Pasto; those of Buenaventura and Panama in the provinces of their names; and those of Montijo and Bocachica in the province of Veraguas.

The Port of Arauca and that of the Uceta on the rivers of these names in the province of Casanare, are declared the fluvial ports qualified for import and export trade; and the inland ports qualified for the same purposes, are that of Cucuta in the province of Pamplona, and that of Tuquerres in that of Pasto.

Of Ports qualified for Export Trade only.—The Ports of Sabanilla and Zapote in the province of Cartagena, are declared ports qualified for export trade only.

Of Warehousing Ports.—The Ports of Cartagena, Santa Martha, Rio Hacha, and Portobello in the Atlantic Ocean; and that of Panama in the Pacific, are declared to be warehousing ports.

Of Ports through which a Transit Trade can be carried on—The transit trade can be carried on through the ports of Panama, Portobello, and Chagres.

Of Free Ports.—In the Pacific Ocean, the ports of Buenaventura and Tumaco are free ports; the former until the year 1879, the latter until 1861.

Every class of national and foreign vessels, can freely enter and leave the free ports, without paying port dues, or import, or other national duties.

[The executive power can except, in case of necessity, from the general disposition of this article, vessels of nations at war with New Granada.]

The exemption from duties mentioned in the two antecedent articles, only comprises merchandise which may be consumed in the town of Buenaventura, or the Island of Tumaco; and goods, which leave the said town or island for another or other places of the republic, by land, by river, or by sea, are subject to the payment of national duties.

The following legislative dispositions remain subsisting; viz., the decree of the 11th of June, 1842, authorising the executive power to open the port of San Buenaventura on the River Zulia, and declare that of Cucuta a warehousing port; the decree of the 1st of July of the same year, authorising the executive power to open for import trade the port of Sabanilla in the province of Cartagena.

The Port of Iscuandé in the province of Buenaventura, shall remain closed until the completion of the road of the province of Popayan to the margins of the River Iscuandé, the port being only open for the salt and provision trade necessary for the consumption of the inhabitants of the cantons of Iscuandé, Micai, and Barbacoas.

Given at Bogota on the 22nd of March, 1844.

Tonnage Duties.—By the levy of the 29th of March, 1846, the duties on ships, viz., entrance, tonnage, anchorage, and pilot dues, to be collected under one head, to be denominated tonnage duty.—(See Scale hereafter.)

The Granadian ton shall consist of twenty quintals of about 103 lbs. avoirdupois.

DECREE, authorising the introduction of Foreign Effects by the Port of Chagres, with direction to the Custom-house of Panama, with a view to be imported through the latter.

I, PEDRO ALCANTARA HERRAN, President of the Republic, Decree.

I. The introduction by the Port of Chagres of foreign effects intended to be imported through the custom-house of Panama, shall continue to be permitted.

II. The manifest of foreign effects introduced by Chagres to be imported through

the custom-house of Panama, shall be presented within the term, and with formalities prescribed in the 23rd Article of the Law of the 5th of June of this year.

III. In the said manifesto, the name of the person to whom the effects are addressed in Panama, to be delivered to the custom-house, and who is to take the other steps relative to the importation, shall be stated.

IV. After the delivery of the manifest, the heads of the custom-house of Chagres shall permit the effects to be trans-shipped from the vessel in which they were brought, to those which are to convey them by the River "Gorgona" or "Cruces," or to be landed and conveyed to the warehouses of the custom-house, if the trans-shipment could not be effected, or if the party interested desire it.

V. In order to carry into effect the trans-shipment, or the landing of the packages, one of the two chiefs of the custom-house shall compare them with the manifest as respects their kind, numbers, and marks, and shall seal them with the custom-house seal, kept for that purpose, and which shall bear the inscription "Importation for Panama."

VI. It shall not be necessary to open the packages in order to compare them with the manifest, which shall only be done with the object stated in the foregoing Article.

VII. The packages shall be conveyed from Chagres to Panama, with a permit issued by the Chagres custom-house; to obtain which the party interested shall present a duplicate application to the heads thereof, for the said permit, the original being drawn out on a stamp, and the duplicate on common paper.

VIII. The application for the permit shall be the same in every respect as the original manifest, setting forth the packages, their nature, numbers, marks, and contents of each, together with the declaration that they are directed to Panama, to be imported through the custom-house of that port, and the name of the owner or consignee in that city.

IX. The heads of the Chagres custom-house shall compare the original and duplicate application for the permit with the manifest, and if found correct, shall annex the corresponding licence, together with the declaration that the effects have not paid import duties, and of the term within which they must be presented in the custom-house of Panama.

X. The licence being issued, and copy of it made upon the duplicate which is to remain in the custom-house, with the documents serving as vouchers of its accounts, the original shall be delivered to the party interested, that it may accompany the effects.

XI. Immediately after issuing the permit, the comptroller at Chagres shall remit to the comptroller of Panama the original manifest.

XII. The comptroller at Panama shall duly inform the comptroller at Chagres of the receipt of the manifest, as also of that of the permit, and of the effects which accompany it.

XIII. The bales shall on no account be opened in their passage from Chagres to Panama.

XIV. Although, in order to proceed to the examination of the packages of a manifest, the arrival of all those belonging to the same permit or manifest is to be waited for, this does not hinder the examination of such packages as may be observed to have received damage in the transit.

XV. In the receipt of the packages, examination of the effects, and calculation, payment, or security, for the import duties, the Panama custom-house shall proceed in conformity with the Law upon the subject, and the Decree published yesterday for carrying the same into effect.

XVI. Effects introduced by Chagres, with a view to be imported in Panama, cannot, after having been declared as such, be left in bond, nor re-exported without paying the import duty.

Given at Bogota, on the 4th of November, 1844.

RETURN of Tonnage Dues, including Fees, and other Charges imposed on Shipping at the Ports of New Granada.

Port Dues on national or British vessels.		s. d.		OBSERVATIONS.
		3	0	
	Under 100 tons	3	0	National coasting vessels, vessels of war, packets, post-office vessels (national or foreign) pay no tonnage dues. No vouchers are given. Tonnage dues are only paid at the first port of arrival; if the vessel touches at any other port of New Granada, no further tonnage is required.
	Over " the first 100 tons.....	3	0

CHAPTER III.

TRADE AND NAVIGATION OF NEW GRANADA.

THE contraband trade interferes so seriously with official statements, that they are much under the actual amount. We have received a report published in the bulletin of the Minister of Commerce of France, of which the following is a condensed translation :—

Money, 25 francs = 1*l*. sterling.

According to local information obtained by the French consuls, the average annual value of the foreign trade of New Granada is estimated at 40,000,000 francs.

Imports.—The imports in 1840 scarcely exceeded 17,000,000 francs; in 1843 they rose to 23,000,000 francs; in 1844 they fell to 22,000,000 francs.

Exports.—In 1843 the exports amounted to 16,000,000 francs; in 1844 they fell to 14,000,000 francs.

Customs' Duties.—Of the 22,000,000 francs value of merchandise entered for consumption in 1844, the customs duties' amounted to 5,770,000 francs, or more than twenty per cent on the official value.

Trading Countries.—The countries which contributed mostly to the trade of New Granada, are Jamaica and Liverpool, to the extent of 13,000,000 francs; France, 3,769,000 francs; United States, 1,000,000 francs; Island of Curaçao, 820,000 francs; Spain, 610,000 francs; Venezuela and Peru, each about 750,000 francs.

English Trade.—The English imports, forming three-fifths of the whole, were principally composed of cheap *cloths* and *stuffs* of all kinds, and which no country can compete with in price; the bad and discoloured *cottons* of Switzerland and Germany are those which seem more particularly to menace similar English articles in the Granadian market.

United States Trade.—The importation from the United States diminish yearly; they are principally made up of *flour*, *salt goods*, *drugs*, and imitations of European goods.

Spanish Trade.—Spain expedites to New Granada, either direct or indirect by the way of the Island of St. Thomas, *raisins*, *wines* of Catalonia, *Sauhucar*, and of Malaga; common *oil* and rough Biscay *iron*, which latter the English have imitated, and are in a fair way to supplant.

French Trade.—The trade of France with New Granada appears to have greatly fluctuated. During the years 1837 to 1840, the French imports amounted to an annual average of about 1,135,000 francs; during the political disturbances which agitated that country, *nil*; in 1843-44, they were estimated at 3,000,000 francs. Havre de Grace alone sent to the New Granadian market manufactured goods to the amount of 3,000,000 francs.

The French *cloths, velvets, paper, the ribands* of St. Etienne, and particularly *Parisian goods*, find an advantageous market. The fine superior French *silks* are too expensive to find buyers as yet; the same is also the case with the fine *muslins* of Mulhouse and French *indianas*.

French *wines and brandy*, upon which there is a high duty, have but a limited sale; the greater part of the population of New Granada are too poor to purchase even the cheap wines of Spain: they drink in general nothing but water.

PORT OF CARTHAGENA.—The periodical returns for the Port of Carthagena, prior to 1844, were very indifferent and incomplete; we can therefore only give a *resumé* for the last two years (1843 and 1844).

This is one of the finest harbours in the world; it will float, secured from all danger, a whole fleet, and is the only port on the coast of Granada fit for the repair of vessels.

General Navigation.—The navigation, not including the coasting trade, amounted to eighty-six vessels, measuring 12,605 tons in the year 1843, and to eighty vessels and 12,950 tons in 1844.

English Tonnage.—The amount of English tonnage trading to this port for the year 1844, was 5404 tons, the United States 3432 tons, and France 3102 tons. Other countries almost *nil*.

Trade.—The total value of the interchanges of merchandise in the year 1843, are valued at 10,369,000 francs, of which goods to the amount of 3,731,000 francs were imported, and 6,638,000 francs were exported. In the year 1844, they only amounted to 9,020,000 francs, of which the imports were estimated at 3,017,000 francs, and the exports at 6,013,000 francs. Carthagena enjoyed one-fourth part of the total commercial operations of the country in 1844.

Imports—English Trade.—This trade received from England and its dependencies to the value of 1,740,000 francs of *tissues and manufactured articles*.

French Trade.—From France 654,000 francs, composed of *painted cloths, ordinary cloths, silks, linen, &c.*

United States Trade.—And from the United States 473,000 francs, chiefly *flour* and other kinds of *provisions*.

Exports to England.—The exports from this port, principally made to England, amounted to 5,176,000 francs of *specie* (doubletons), and small quantities of *platinum, dibidivi, tobacco, Indian corn, and beasts of burden*.

To France.—The exports to France limited themselves to 335,000 francs.

United States.—And those to the United States to about the same value, composed principally of *specie, raw and cured hides*, and a few parcels of *tortoise-shell*.

Canal.—To give greater vigour to its trade, a canal is being re-opened, which formerly communicated with the interior, and joined the River Magdalen to the sea. It will commence at Barranca, about six myriametes (seventy-two miles) above the mouth of the Magdalen, and in the centre of a country producing *sugar, hides, cacao, dyewoods, &c.* The completion of this canal will have the effect, it is hoped, of drawing out the produce of New Granada and of diminishing the expense of transport.

DIRECT TRADE OF FRANCE WITH NEW GRANADA. 1837 to 1844.

YEARS.	Navigation entered and departed.		General Trade.			Special Trade.		
			Imports.	Exports.	TOTAL.	Imports.	Exports.	TOTAL.
	Vessels.	Tons.						
	No.	No.	fr.	fr.	fr.	fr.	fr.	fr.
1837.....	15	3,222	550,000	430,000	980,000	227,000	361,000	588,000
1838.....	8	1,522	495,000	435,000	930,000	334,000	383,000	717,000
1839.....	15	2,684	526,000	167,000	693,000	416,000	92,000	508,000
1840.....	30	5,555	680,000	640,000	1,320,000	290,000	312,000	611,000
1841.....	28	5,213	1,039,000	561,000	1,600,000	557,000	295,000	852,000
1842.....	21	3,865	808,000	1,413,000	2,311,000	543,000	1,061,000	1,604,000
1843.....	23	3,916	1,532,000	2,916,000	4,448,000	782,000	1,919,000	2,701,000
1844.....	30	5,250	1,310,000	3,127,000	4,436,000	1,096,000	1,910,000	3,015,000

From the above table we see that from 1840 the French trade with New Granada has rapidly increased. The trade is almost exclusively carried on under the French flag.

Exports to France.—The exports from this country to France in 1844 were composed of *mother-of-pearl, raw hides, dyewoods, tortoise-shell, cotton wool, cigars, dibidivi, and objects of natural history, &c.*

Imports from France.—Among the French exports to New Granada the *tissues* were valued at 1,712,000 francs, of which the French manufactured 751,000 francs, the remainder being foreign; also *paper, books, and engravings* to the extent of 209,000 francs, *perfumery*, 180,000 francs; *pottery ware*, 93,000 francs; *wines and brandy*, 83,000 francs.

Tissues (woven goods) as quoted above, form a large portion of the French envoys to New Granada, the following table gives the annual value exported from France during the last eight years.

1844.....	354,000	244,000	112,000	41,000	751,000

Mode of Trading.—To be successful in the trade of New Granada, the importers must vary their goods according to the patterns and samples sent them. To attempt to introduce a novel article of fashion would be futile; there are certain colours and patterns which in that country have become *hereditary*, and no fashion could change this national usage. Also our merchants must strictly confine themselves to the customary length and breadth in a piece of *stuff*, such is the force of habit with the natives, that they cannot be brought to understand that the larger the size and the better the quality of a piece of manufactured *stuff*, the greater is its price.

Payments.—There is also another very important obstacle which this trade meets with—the European *manufacturers* are too sanguine in selling their goods for ready money; when a vessel arrives, if it cannot, after disposing of its cargo, immediately procure one in return, it is forced to accept *coined gold*, which is very expensive, valuing sometimes twenty per cent. The above are facts we would strongly recommend to the serious attention of merchants trading to New Granada.

Packing Goods.—The trade of Bogota, and of the interior, complains of the *French* mode of packing their goods. On this head the English are thoroughly expert, knowing that the goods are transported on *mules*, they pack their merchandises in suitable sizes; whereas in France, the bales are made up to an impracticable bulk.

Indianas.—The size of the French *indianas* also displease the native merchants as being too large; they should imitate the English size, which is twenty-eight yards long, and never exceeds three-quarters of a yard in breadth.

Real and Paste Jewellery are greatly demanded, as also articles of *fashion*, but they must all be of a low price and in small parcels; in the latter articles, as before said, the taste and caprice of the inhabitants must be consulted.

Payments.—We cannot too strongly impress upon the attention of our merchants the absolute necessity of giving credit for merchandise sold, for six, twelve, and eighteen months together, otherwise the Granadian merchant, trading to Europe, who follows this system (it being, indeed, the custom of the country) will eventually succeed in supplanting the European trader. Houses having formed alliances with Granadian ones, and of necessity following this course, are in a prosperous condition.

Wages.—At Bogota, and in the interior, the number of European artisans are daily increasing, and good conduct and attention to their business would make them successful, but the wages being unfortunately high, lead them too often to idleness and dissipation.

PANAMA—STATE OF TRADE IN MARCH, 1845.

Trade.—The trade of this port with Europe is of very little importance. Even the English flag is seen but rarely.

Coasting Navigation.—This limited trade is carried on by means of the coasting-trade, with Callao, Guaquil, and other intermediate ports at Peru.

Products.—The products of the country are very limited, the most important, viz., *gold-dust* and *pearls*, are exported *viâ* Chagres, and in general without any official declaration, which prevents us from valuing this branch of the trade. The articles sent to Europe from Panama, are *hides* and *coffee*, generally of foreign origin, and are brought *viâ* the coasting-trade, from Central America.

Mother-of-pearl and Unmanufactured Shells.—A vessel from Bordeaux is at this moment (March, 1845) taking in a cargo of shells, in the Archipelago of the Pearl Islands, destined for Havre.

STEAM NAVIGATION BETWEEN PANAMA AND VALPARAISO—MAILS CROSSING BETWEEN THE TWO SEAS.

Navigaton.—A contract has been concluded between her Britannic Majesty's government and the Pacific Steam Navigation Company, for the conveyance of mails on the western coast of South America between Valparaiso and Panama. This is an important arrangement, as the mails, being taken across the isthmus to Chagres, can be regularly brought by the vessels of the West India Royal Mail Company to this country, instead of performing the long circuitous route by Cape Horn.

The British import trade is yearly on the decrease.

In 1843, the quantity of British goods imported in British bottoms amounted to £ 64,551
 „ In New Granadian 52,189

Making a total of 116,740

In 1844, the quantity imported in British bottoms, amounted to . . 33,585
 „ In New Granadian 35,847

Making a total of 69,432

In 1845, the amount in British bottoms, is only 25,321
 „ In New Granadian 19,236

Making a total of 44,557

This decline is the result of the facilities afforded by the rival port of Santa Martha, for communication with the interior of the republic, and the more lenient system pursued at the custom-house of that port. The goods imported into Carthagena are almost exclusively for the consumption of the province, and few find their way into the interior.

The export trade is reduced almost entirely to *specie and bullion*, which is conveyed by the steamers of the Royal Mail Steam Packet Company, and deposited in the Bank of England, to cover the credits opened in that country.

Produce is exported chiefly from Savanilla (a port of export only, situated sixty miles to windward of Carthagena), and a small port close to Carthagena, called *Zapote*, the former of which may be called the tributary port of export for Carthagena in the present interrupted state of communication with the interior by the closing of the *Digue*. Vessels proceed hence to Savanilla to take in their homeward cargo, after unloading at this port. On the opening of the *Digue* (canal), Carthagena will again resume its place among the ports of export.

The total value of exports for this year from the Port of Carthagena is 13,488*l.*, of which only 637*l.* was exported in British bottoms. In proportion as the exports of Carthagena have decreased, so have those of Savanilla increased.

	£
Thus in 1844, the amount exported from Savanilla was	43,189
In 1845	52,638
<hr/>	
Showing an increase in favour of 1845, of	9449l., or seventeen per cent.

The chief articles of export from Savanilla are sugar, coffee, cotton, hides, corn, tobacco, and dividivi. The amount of sugar exported is far greater this year than the preceding. In 1844, there was only exported to the value of 1158l. In 1845, there has been exported 225,408 lbs. at six dollars currency per 100 lbs. (twenty-four shillings sterling) amounting in value to 2504l., or an increase on last year of fifty-three per cent.

Cotton has decreased in value and quantity exported, the growers not taking sufficient pains to cleanse it sufficiently to compete with other markets. It has fallen in price from twenty-four to sixteen shillings the 100 lbs.

Dividivi is much reduced in importance as an article of export.

Maize, or Indian Corn has been exported to the value of 4054l., showing an increase over the preceding year of fifty-seven per cent. Its price varies from four to six shillings the fanega (two bushels and a half). It consists of two qualities, the white and red, the latter of which takes precedence. Maize forms the chief article of food of the population of the coast. It is pounded, moistened, undergoes a short culinary process, and is sold in the form of a cake under the name of bollo.

Bills on England are scarcely attainable, and the credits are met by the shipment of specie, and more especially *gold dust* (though prohibited), a large quantity of which continues to be exported, and may be bought on the coast at 250 to 262 dollars the lb. (50l. to 53l.) The surveillance of the custom-house has been unusually rigid in consequence of stringent orders from government, but nevertheless the produce of the gold mines of Antioquia, Choco, and Popayan, finds its way on board the steamers to the Bank of England.

The new gold mine discovered and opened in the year 1844, by a company of French and natives, at the head of the River Sinu, has proved a complete failure. The gold, though abundant, and of good quality, afforded only a dazzling prospect to needy adventurers, and the failure of the enterprise adds one more to the bubbles of these companies.

Tobacco, the great staple product of this country, is opening a vast source of revenue, and if properly managed, may become an important article of export. It still continues a government monopoly, and its cultivation is confined to the provinces of Ambalema and Jiron. A fear is entertained that a more liberal spirit in its cultivation may tend to deteriorate its value in foreign markets, thus an important product affording scope to agriculture and manufacture, a product peculiarly adapted to the varied soil of the country, and indolent character of its inhabitants, is hampered, and restricted from an ill-founded fear that the revenue will suffer.

At *Guaduas*, in the neighbourhood of the capital, a house has been established for the manufacture of cigars for exportation, and 4,000,000 of cigars have lately been contracted for.

Tobacco, Rum, Sugar, Coffee, and Aniseed, still continue prohibited articles of import. These, however, by a late regulation, may be bonded for re-exportation on notice to that effect being given within twenty-four hours.

The Tariff still remains as last year, though its revision has been strongly urged on government. The custom-house has, however, relaxed in its severity, and merchants are now permitted to rectify their manifests, and correct errors before presenting them to the collector, by which the odious imposition of double duties is avoided.

Vessels, of whatever nation, are exempt in this port from tonnage and anchorage duties until the year 1852—a boon granted to Carthagena for its sufferings in the siege of 1842. The only fees levied, are captain of ports and pilotage, even from these, packets and men-of-war are exonerated.

Exchange may be quoted from 530 dollars to 540 dollars currency, the 100l. sterling and doubloons command a premium of eleven to twelve per cent.

An Embryo Bank, called *Caja de Ahorros*, or Savings' Bank, has been established, and has yielded a nett per centage of two per month, or thirty-four per cent per annum, which may be considered as the value of money on good security.

The Dique or Canal, connecting the Bay of Carthagena with the Magdalena, is in full progress. Already one league of excavation has been effected. The dredging machine is to be shortly put in motion at the exit in the bay, which, meeting the excavating process at the town of Mahates, will complete the undertaking. The whole extent of this canal is about eighty miles from the Magdalena River near Barranca to Pasa-Caballos, in the Bay of Carthagena; of this only fifteen miles requires excavation, the rest is a natural channel. The depth is about four feet. Labourers are found in abundance at the rate of three rials, or eighteen-pence per diem, finding their own provisions.

A *Steam Company* to navigate the Magdalena has been formed in London. The new Granadian minister is elected honorary president, but this much to be desired undertaking will probably expire at its birth, as capitalists will be loth to risk their money in a country, the stability of whose institutions is still doubtful.

The Royal Mail Steam Packet Company continues its operations on this coast with increasing success, and admirable regularity. Merchants have, however, not as yet profited by the steamers for the transport of merchandise, the freight being considered too high.

The College numbers 200 pupils. The chairs of divinity, jurisprudence, and medicine, are filled, and the students qualified to take their degrees in these learned professions. A yearly public examination takes place for this purpose. The rudiments of the English and French languages are also taught.

There are two other preparatory seminaries, each of which numbers fifty scholars, who are taught in the different branches of education; and a school for the education of the better class of females is conducted in a spirit of progressive enlightenment. On the whole it may be said, that attention is being turned by the government to a more liberal system of education, the germs of which are already firmly planted.

Sufficient attention, however, is not paid to the moral and religious culture, the latter of which resolves itself in the observance principally of the outward forms of the Catholic religion, attendance on processions, &c. Throughout the republic, the priesthood are in a very depraved state, and with the exception of the higher dignitaries of the church, the common forms of morality and decorum are hardly observed.

There are Two Hospitals; the hospital of the Convent of San Juan de Dios for the poor, and the Military Hospital, conducted on a more liberal footing, access to which may be had by diseased sailors of foreign nations, on application being made to the commandant-general of the town.

The Salubrity of this port is greatly increased of latter years, owing to the greater attention to cleanliness, and perhaps a more favourable change in the seasons. Malignant fevers are rare, and though the heat is intense, the mortality among foreigners is not great. The thermometer ranges from 80 deg. to 86 deg. of Fahrenheit in the shade. The seasons are divided into two: the Verano, or dry season, and the Hibierno, or wet season; during the former, strong breezes from the north-east prevail.

The Population of Carthagena amounts to about 10,000; it is difficult to give an accurate estimate, as no census is taken. It is supposed that of this number not 1000 are white. A rapid amalgamation of colour is taking place, and ere long there will scarcely be a family on the coast of pure unmixed blood, so completely are the African and Indian races predominating over the purer Caucasian descendants of the Spanish race.

Santa Martha affords great advantages and facilities (from its locality) in the forwarding of merchandise to the interior, there being no land carriage, exposure, or transshipment, as they are at once shipped on board large-decked boats, and not again removed in any way until their arrival at Honda, the extremity of navigation on the River Magdalena; they have not these advantages in Carthagena, as the merchandise is shipped in small uncovered boats, having to go through a small canal where large boats cannot pass, and then landed and carried on mules' backs half a day's journey, to a town called

Barraula, on the Magdalena, where they are again reshipped in boats that go to Honda. In this operation there is great exposure and risk, besides considerable extra charges, which is not incurred at Santa Martha, where the merchandise is at once placed on board a boat that takes it directly to its destination, as there is a direct communication with the River Magdalena.

The principal part of the cargoes of the American, Dutch, and Granadian vessels also comprises a considerable proportion of British manufactures. A bonding warehouse has been established; merchandise can lay there for an unlimited time on paying at a rate of four per cent per annum.

There is a municipal duty on flour and some other articles, which vary in every town.

The most considerable exports are from Savanilla, a port situated at the entrance of the Magdalena, about forty miles to leeward of Santa Martha, and where there is no town, the only building being a temporary custom-house; the nearest town is Barranguilla, situated at about twenty-five miles distance. It is not a port of entry, and vessels are only allowed to proceed there to load with produce, by first calling at either the ports of Carthagena, Santa Martha, or Rio de la Hocha, entering at the custom-house, and having no goods, wares, or merchandise on board, but the necessary stores, &c., for the voyage. They then obtain clearance in ballast, with a permit to go there and load a cargo; from the facilities, and as this is the nearest port, and to windward, vessels prefer calling here for their clearance.

A considerable part of the produce shipped from Savanilla is for account of the merchants of Santa Martha, which obviates the charges of transporting it from the River Magdalena to this port.

The export of specie is considerably more than will appear by the returns. No duty being paid, as was formerly, it is difficult to ascertain correctly any average sum, as there is a very large quantity of gold-dust and bars clandestinely shipped. Uncoined gold and silver is altogether prohibited from being exported or found in the possession of any person within fifty leagues of the sea-coast, under the severest penalties.

The province of Santa Martha comprises six cantons, forty-five towns, besides several small Indian villages. The population, when the last census was taken four years ago, was 46,587 souls, and has increased very much since.

The principal and staple exports of the country affords the following; say, dyewoods of several descriptions, dry and salted hides, cotton, cedar, mahogany, dividivi, horned cattle, mules, horses, and asses, together with sugar, Indian corn, cocoa, &c. &c. The Indian corn is much cultivated, and is very productive; considerable quantities are exported to the British and other West India Islands.

The cultivation of the sugar-cane, coffee, and cocoa, has been much followed up lately; and considerable quantities of sugar are made, together with rum and other spirits, augmenting daily, and new estates establishing; the cultivation of which must benefit and advance the country rapidly, the lands being a virgin and productive soil, and this part of the country being so well watered throughout, that they are much less dependent on the seasons than in the islands; there are rivers and streams running in every direction.

The roads, within eight or ten leagues of the town, are tolerably good; and they have also the advantage of water-carriage further inland.

Agricultural affairs have been much retarded from the unsettled state of the country, the scantiness of population, and the numbers that were lately employed in the army, but, as the military are nearly all disbanded, they are now turning their attention to agricultural pursuits.

Fish.—There is abundance of river and sea-fish of the best description, and of excellent quality for salting. There are several natural salt ponds along the coast, and within a short distance from the town, where any quantity can be collected at a trifling expense.

There are several extensive lime and brick kilns within a short distance of the town, they make use of the coral rock for burning into lime.

The town is in a state of progressive improvement, and new buildings are erecting rapidly.

Slavery is abolishing fast ; in the year 1819 a law of congress was passed, declaring the issue of all slaves born after that period to be free on their attaining the age of eighteen years, it being considered that their services up to that period would initiate them into habits of industry, and be of some compensation to their owners for the expense and trouble of bringing them up.

The principal part of the labourers here are the *Sanebós*, a mixed race between the Indian and negro. They are an athletic and hardy race, superior to the original Indian and negro stock. The average value of labour is from 1s. 6d. to 2s. sterling per diem, out of which they maintain themselves. Meats, provisions, dried fish, &c. &c., being uncommonly cheap, and from the nature of the climate, not requiring, and using very little clothing.

A steam-engine has lately been introduced, of about twenty-horse power, by Don Joaquim Leehelm, one of the most wealthy and intelligent men in the country. He has placed it on his estate of about one league from the town, and it has given so much satisfaction that several have been lately ordered from America.

Santa Martha, from its locality and other advantages, together with the extensive trade in corn, provisions, horses, cattle, &c. &c., with which it supplies Jamaica, and the other West India Islands, ranks it as one of the principal ports of "New Granada."

CENTRAL AMERICA.—The following consular statement for the years 1843 to 1844, though referring to the Isthmus of Nicaragua and to Salvador, we subjoin in the absence of further information.

The foreign import trade of the state of Nicaragua, and of the republics in general of Central America, has been greatly effected by the *continuance* of the internal *commotions*; nevertheless, owing to the great competition of speculators, the consumption of foreign manufactures has increased.

The quantity of indigo exported has been about 4500 bales, three-fourths of which were the produce of the state of San Salvador, the crops of Nicaragua having almost entirely failed, owing to the want of rain during the season.

The civil war of Guatemala has partially interrupted the cultivation of cochineal, to which attention has been given in the state of Nicaragua and Salvador.

Agriculture is making some progress in Costa Rica. Coffee, which is of a superior quality, is becoming an article of export trade. 5000 quintals were shipped last year. The quantity of chancala (coarse sugar) exported from the ports of the Republic in 1838, is estimated at about 35,000 quintals, of which Costa Rica produced about two-thirds.

Mines.—Some activity is also visible in the mining districts of Costa Rica, and some valuable machinery has arrived from England.

Nicaragua is beginning to encourage the working of mines, which are supposed to abound in the mountainous districts. Gold, silver, and copper abound in all parts of the state of Honduras, but the insecurity of the country prevents persons from embarking capital in these works

CHAPTER V.

STATISTICS OF VENEZUELA.

Mines.—We have no account on which any reliance can be placed with reference to the minerals of Venezuela. The precious metals are reported to be abundant, especially in Cundinamarca. In Choco and Antiaqueo gold and silver are found, and, it is said, quicksilver. Mines of lead, iron, and copper have been worked in Socono. General Mac Gregor had cannon cast of the copper in 1813, but the backward state of enterprise has, with trifling exceptions, left the mineral riches of Venezuela undisturbed. Pasturage and agriculture, being, for a very thinly-settled region, far more immediate means of subsistence: especially since the Spanish race can no longer enslave the aborigines to work the mines.

Manufactures.—Comparatively speaking, manufactures scarcely more than exist. Tanned leather and morocco leather are prepared in Corora, blankets are made in Tocuyo, on a small scale, and constitute the chief manufactures. Some other articles are made by foreign workmen established in the country. The vapour *refined sugars*, the *cured hides*, and the *soaps*, might obtain preference to the same articles from the United States—*tallow candles* are made of fair quality.

Some articles peculiar to the country are worthy of attention—such as *mats* made by the Indians of the *fibres* of the palm-tree, called Mauritia, and *hemp* of

the *cocuisa aloe*, of a peculiar fineness, and *straw hats* of Maracaybo, equal in quality, or nearly so, to those of Panama. The interior provinces of Barquisimeto, of Merida, and Trujillo, manufacture *table-cloths of cotton*, but will not bear comparison with similar European articles.

The mechanical trades are workers in *jewellery, locksmiths' work, armourers' work, joinery, and saddlery*, of little importance. They are manufactured with rough, coarse tools.

Joinery and saddlery are the most advanced trades at Caraccas, through the means of foreigners, who, for twenty years, have been settled at that place. Few samples of furniture show the great varieties of wood valuable for cabinet-makers' work.

Agriculture.—We can only give a mere sketch of the state of agriculture in this state. It is in a greater degree a pastoral than an agricultural country. Yet this extensive region has soils and climates adapted for the growth of every useful and rich product. Among the articles cultivated are some wheat in the high parts; maize, or Indian corn for tortillas (the corn bread), sugar, cacao, coffee; some cotton, indigo, and tobacco.

During the four years 1799 to 1803, 145,000 fanegas of cacao were exported from Maracaybo and Venezuela.

Sugar has long been cultivated and exported, but not in great quantities. It has been exported to England since the duty has been diminished. (See Trade of Venezuela.) And the province of Caraccas, if labour were abundant and enterprise exerted, has a soil and climate to produce an immense quantity.

Coffee.—Excellent coffee might be raised with ordinary care. At present its quality is inferior to that of Jamaica. The produce, in 1812, was estimated at 5,000,000 lbs. There are two kinds, the one called *of hot earth*, the other *of cold earth*; they are worth the ordinary qualities, ten gourdes and a half per 100 lbs.* Spanish (ninety-one francs per 100 kilogrammes).

Under the Spanish domination, the exportation of coffee did not surpass 60,000 quintals (2,760,000 kilogrammes) per year. From the 1st of July, 1840, to the 30th of June, 1841, the exports were estimated by the custom-house at 259,992 quintals (11,960,000 kilogrammes) of a value of 2,446,962 gourdes, or 9,788,000 francs. If to this quantity is added the 35,000 quintals, which is annually consumed at Venezuela, the actual production would be of 294,992 quintals (13,570,000 kilogrammes).

The soil and climate being one of the most favourable for the culture of this bean, it is estimated, that when once the new plantations shall be in full bearing, the country will produce above 500,000 quintals of coffee (23,000,000 kilogrammes).

Cocoa.—There are numerous plantations of this indigenous fruit, chiefly in the valleys beyond the mountains of the sea-coast. In 1789, 103,655 fanegas were exported. The produce of Caraccas, Maracaybo, Cumana, and New Barcelona, in 1806, was estimated at 193,000 fanegas. That of Caraccas is considered superior, not only to the cocoa of other parts of the republic, but to every other country. The *red* varies in price from sixteen to twenty-four gourdes per 110 lbs. of Spain (136 to 226 francs per 100 kilogrammes). *Gray* cocoa (which was that sent to France before the promulgation of the late Spanish *laws* on the customs of the *vascondagas* provinces) is worth at Caraccas from twelve to eighteen gourdes per 110 lbs. Spanish (113 to 170 francs per 100 kilogrammes).

There was exported from the 1st of July, 1840, to the 30th of June, 1841, 76,560 quintals (3,521,700 kilogrammes) of cocoa, of a value of 1,327,000 gourdes (5,308,000 francs).

The local consumption is calculated to be about 36,000 quintals (1,650,000 kilogrammes), and the contraband trade conceals nearly 15,000 quintals, (690,000 kilo-

* The pound is 0.46 kilogrammes.

grammes), which makes the product amount to 128,000 quintals (5,818,000 kilogrammes).

The culture of this article was of greater importance in the time of the Spaniards, as the exportation amounted then to 95,000 quintals (4,370,000 kilogrammes), but a great number of cocoa-trees were destroyed during the war of the Independence. Later, and up to 1835, the planters either had not the means, or dared not, in the uncertain state in which they lived, form new plantations. The valley of Tuy lately cultivated, which is only eight or nine leagues from Caraccas, produces excellent cocoa.

Indigo.—There are three kinds, but all are inferior to the indigo of India. That of the valley of Tuy is the most esteemed. The culture and trade of indigo at Venezuela has lost much of their importance since its separation from Spain. Before 1820, the exportation amounted annually to 10,000 quintals (460,000 kilogrammes), of a value of 1,200,000 piastres specie (6,500,000 francs); from July 1, 1840, to June 30, 1841, it amounted but to 5462 quintals (251,200 kilogrammes), which at 125 gourdes per quintal, has produced a sum of 682,750 gourdes, or 2,731,000 francs.

Cotton is not in quality so good as that of the United States. It is worth on an average thirteen gourdes per 100 lbs. Spanish (113 francs per 100 kilogrammes). Venezuela has not the long silky-like cotton.

The exportation of cotton from July 1, 1840, to June 30, 1841, amounted to 2,014,000 lbs. (926,440 kilogrammes), of a value of 242,000 gourdes (968,000 francs).

According to official documents published at Caraccas in 1839, about 50,000 quintals of cotton (2,300,000 kilogrammes), were produced, which at ten gourdes and a half per quintal, produces a value of 525,000 gourdes (2,362,000 francs); the exportation amounted the same year to 27,993 quintals (926,300 kilogrammes), valued by the minister of the finances, at 241,989 gourdes (968,000 francs). Under the Spanish government, the exportation of cotton never amounted to 25,000 quintals (1,150,000 kilogrammes).

Leather (sole leather).—That of Caraccas is considered too heavy; that of Puerto Cabello and of Angostura is exported to France. The exportation of leather, from July 1, 1840 to June 30, 1841, amounted to 574,000 lbs. (264,000 kilogrammes), valued at 506,000 gourdes 2,024,000 francs).

Dividivi.—Is a kind of husk that covers certain seeds.

To be used it must be reduced to powder, sifted, and boiled in water for the space of eight or ten hours. It is sold wholesale from six to eight reals per quintal (6fr. 50c. to 8fr. 70c. per 100 kilogrammes).

The exportation of dibidivi amounted to 1,264,000 lbs. (581,440 kilogrammes), valuing 18,000 gourdes (72,000 francs).

Sarsaparilla.—13,000 lbs. (5980 kilogrammes), have been exported, of a value of 2500 gourdes (10,000 francs).

Dyeing-woods and Lignum-vitæ.—Are very little esteemed in France, and serve in general for ship ballast.

Tobacco.—There is a great variety of tobaccos in Venezuela: that of Varinas and of Cumanacao, if well selected, is excellent for cigars.

The Varinas tobacco costs but twelve gourdes or twenty-five cents, to thirteen gourdes at Angostura on the Orinoco. Until now there has been produced in the whole republic, but 50,000 or 60,000 quintals of tobacco per year (2,300,000 to 2,700,000 kilogrammes), amounting to a value of about 500,000 gourdes (40,000*l.*).

In 1841, 11,943 quintals of tobacco were exported (550,000 kilogrammes), value 146,944 gourdes (23,200*l.*). In the time of the Spaniards, the monopoly, *el estanco*, of tobacco, produced as much as 60,000*l.* annually.

Sugar.—Venezuela has seldom produced sugar, except for home consumption; in 1841, there were exported but 8794 quintals (404,500 kilogrammes). The soil is well adapted for the culture of the sugar-cane; that which is wanting are labourers: there are only 49,000 *slaves* in the whole state. In 1844 the total quantity of sugar exported was about 220 tons, in 1835 about 376 tons. Since the alteration of the sugar

duties in 1845 there were exported to England from Venezuela during the six months ending the 20th of June, 702 tons, price 18*l.* 1*s.* 6*d.* per ton.

Cattle forms the principal wealth of Venezuela. The Llanos, or vast plains of the Orinoco, are covered with herds. There are reckoned to be about 2,400,000 horned cattle, 1,900,000 sheep and goats, and 400,000 pigs. During ten years the number has nearly doubled, notwithstanding the great interior consumption and mortality which has laid waste the principal *hatos* of Venezuela.

The Venezuelan *mules* are indefatigable, especially those of Angostura. One or two schooners from Martinique import them.

Indigo was first cultivated, or rather prepared in 1774, and next to tobacco, it becomes the most important product of the valley of Cumana, of San Fernando, and of Arenas in 1784 there were exported from La Guyara 126,233 lbs.; in 1796, no less than 737,996 lbs.; while that of Guatemala at the same time was estimated at 1,200,000 lbs.

Vanilla grows in abundance in the forests. Wild cochineal grows near Coro, Carona, Truxillo, and it is produced of excellent quality in Cundinamarca. Brazil wood is exported from Maracaybo.

Cocoa trees are grown around the villages and houses, and at Cumana they have haciendas, or farms of cocoa-trees; excellent oil is extracted from the nut; sarsaparilla, Jesuits' bark, numerous medicinal plants, drugs and resins are abundant; tamarinds, oranges, and all tropical fruits thrive.

The forest trees are of the most varied and useful kinds.

Ship building Timber.—If cut in national forests, exportation prohibited.

M. Depons says in his time, there were more than 1,200,000 oxen, 180,000 horses, and 90,000 mules pastured on the plains between the Orinoco and Maracaybo; 174,000 ox-hides are said to have been exported in 1790. Herds of cattle are now spread over the pastoral districts.

Along the banks of the Orinoco agriculture is nearly altogether neglected, and the inhabitants are described as remarkably indolent by Robinson and others.

The cattle are killed in the same manner as in Spain. The animal is led to a stake, and the point of a strong sharp knife is stuck in between the two first curvical vertebræ, and the beast drops down instantly dead.*

The agricultural and other products of the country which enter into commerce as articles of export, are stated in the statistical tables of trade.

* Robinson says, "Sometimes they bleed the animal, and sometimes not; but all of them agree in one method of cutting up the meat. No sooner has it ceased to breathe, than they commence the skinning process; and no sooner have they skinned part of it than that part is sliced off in the coarsest manner. Thus it is slashed, cut, and torn asunder in every possible form; the unsalted part being used as pieces for roasting, stewing, and boiling; while the greater part that remains is rolled in salt and hung for a few days in the heat of the sun. Then when dry they call it Tasso; and this, with the hides, form a great part of their merchandise either among themselves or with the West India Islands."

He says, "The people here drink very freely. Their breakfast in general consists of beef and (if they have it) wine or rum, and sometimes a cup of chocolate or coffee. Having performed several surgical operations in Soledad, a village near Angostura, I may here give a sort of notion how they live in that village. The breakfast is a large basin of beef, boiled with plantains: a large basin of stewed beef and onions or garlic; generally a large basin of tripe, stewed with onions or garlic; and, lastly, a piece of beef roasted over the fire on a wooden spit.

"It must be observed that this last is not brought to table on a plate, but sticking hard and fast to the spit on which it was roasted. A person steps round from person to person, till all are served by cutting off what they wish. The bread is generally made of Indian corn, and sometimes rice. Besides Indian corn, there is another kind of bread, which they call cassava. It very much resembles in appearance the oatmeal cakes used in Scotland; but is almost tasteless. The natives use it plentifully, and seem to prefer both it and the Indian corn to our flour. The drink is not tea, but rum-grog, and very often wine (claret). Punch is served up at eleven o'clock, which continues to be used till dinner-time. Dinner is the same as breakfast; and the evening is passed in playing cards, smoking cigars, and drinking.

"So far as I have penetrated South America I have uniformly observed, that the inhabitants

CHAPTER VI.

TRADE AND NAVIGATION.

NEARLY all the trade of the state of Venezuela was formerly carried on from the ports of Caraccas, chiefly through La Guayra, into each of the ports of Maracaybo, Cumana, and Old Guayra, two or three vessels were admitted from Spain. M. Lavaysse, who seems to have investigated the state of trade of Venezuela during the first years of the present century, says—

“According to official statements, Venezuela, during the year 1807, the value of the agricultural produce exported from the provinces which composed this fine country, exclusive of Trinidad, from 1794 until 1806, amounted to about 4,000,000 dollars annually; but, according to the documents taken from the custom-houses of Port of Spain in Trinidad, and from those of the islands of Grenada, Tobago, Curaçoa, St. Thomas, and Martinico, which carried on the contraband trade with the provinces of Venezuela. I am sure the smugglers carried off annually, on an average, more than 2,500,000 dollars in produce; consisting of cocoa, cotton, indigo, a little cochineal, arnotto, woods for dyeing and cabinet-makers, copper, hides, maize, salted and smoked meat and fish, oxen, horses, mules, asses, monkeys, parrots, &c., and about 600,000 or 700,000 dollars in specie, and since 1801, a small quantity of sugar* and coffee. There were annually exported from

seem to have no idea of grinding or bruising their materials by means of any other machinery than that which they possess in the strength of their arms, aided by a concave and convex stone to fit it, or by a wooden mortar. On the surface of the concave stone they put their material to be bruised, such as pepper, salt, coffee, &c., and it is almost incredible to what a fineness they speedily reduce these substances; while their Indian corn, rice, and such substances are bruised in the wooden mortar. After the corn has been bruised, and sometimes the rice, they subject them to the friction of the two stones, with a little water, and thus they form the one or the other into a dough for making bread.

“The better orders of the people conduct themselves at table with great regularity and propriety, as much so, indeed, as could be expected in any country where the advantages of European civilisation have not been experienced.

“The middle orders of people, however, seldom have even one knife at table, and three-fourths of them have nothing but their fingers as substitutes for spoons, knives, and forks. The lower orders, indeed, would apply them to no other purpose than as weapons of destruction to stab each other.

“From this coarse mode of feeding among the great body of the people, and from the gross materials upon which they subsist, stomachic complaints are very prevalent, which are greatly increased by habits naturally indolent and unclean.

“Smoking tobacco, especially in the form of cigars, is almost universally practised: and almost all the women, who practise this more than the men, lose their front teeth.

“Gaming, especially on Sunday, is carried on here to a great extent. This consists in billiards and in cards; and, while the outcry of every one is poverty, poverty, were you to walk into any of the huts, for instance of Soledad, you would find the tables loaded with silver and gold. †

“The women dress their long, lank, black hair in two tresses, one on each side of the head. Among the higher classes, they seem to dress it in one twist, which they fasten with a comb to the upper and posterior part of their head, somewhat in the English fashion.”

* Ten years ago (about 1820) there was scarcely as much sugar made as sufficed the local consumption. I believe I do not exaggerate when I say that, on an average, every individual, rich or poor, consumes at least one pound of it per day. It is mixed with almost all kinds of food and drink; and is indispensable for chocolate, which is taken three or four times each day.—

Lavaysse.

these provinces to Spain and Mexico,* about 2,000,000 dollars in colonial produce; which increases the exportations to about 5,200,000 dollars.

"The official statements of the intendency of Caraccas specified the importations into this country, including contraband trade, at only 5,500,000 dollars, at the same period; but those statements are below the truth. On an average from 1789 to 1807, the annual importations amounted to nearly 6,500,000 dollars, including smuggling. Previous to the French revolution, the French had half of this trade. The French merchants of Martinico, the Dutch of St. Eustacia and Curaçoa, the Danish of St. Thomas, and the Swedish of St. Bartholomew, had their share in this commerce; but since the Island of Trinidad was taken by the British, in 1797, they have obtained all the trade of that country, where they have established commercial connexions; even as far as the central point of South America, in Santa Fé de Bogota, capital of the kingdom of New Granada, whose bishop, a dealer in human flesh, carried on, in 1788 and 1789, the negro trade, in conjunction with an English house in Dominica."

Humboldt, in 1803, estimated the exports of Venezuela at nearly 6,000,000 of Spanish dollars, equal to 1,333,333½ English money. The exports of La Guayra amounted according to his statement, to 2,400,000 dollars; those of Cumana and Nueva Barcelona, to 1,200,000 dollars; of Maracaybo and Angostura to 1,000,000 dollars; and those of Carupano and some smaller ports to 800,000 dollars. During the war of independence agriculture was much neglected, and the amount of exports decreased. In 1824, a year after that event had taken place, the exports of La Guayra did not exceed 1,650,000 dollars, though some of the articles sold at a higher price. The disturbed state of the country has prevented the trade from improving, as is apparent from the British imports, which, though by far the most important, did not exceed 200,000½ annually, between 1829 and 1837, on the average of that period.

STATEMENT of the Value in currency dollars of Imports into, and Exports from, the Republic of Venezuela, with the Amount of Duties thereon, distinguishing the Trade with each Country, in the Year ending the 30th of June, 1839.

Report on the Trade of Venezuela, drawn up from Official Returns at Caraccas, and published by the Minister of Commerce and Agriculture, in his Official Bulletin, 1845.

Imports.—The total imports for 1841-42, were estimated at 25,220,000 francs, and in 1843-44, they fell to 17,636,000 francs (twenty-five francs to one pound sterling).

Exports.—The exports for the same period fell from 30,412,000 to 23,867,000 francs.

* A great quantity of Venezuela cocoa, commonly called Caracca, is exported to Vera Cruz.
—*Ibid.*

Decrease of Trade.—The total value, therefore, of the trade of 1843-44, gives a diminution of 14,129,000 francs, or twenty-five per cent, in comparison to that of 1841-42, and of 6,025,000 francs, or twelve per cent on that of 1842-43.

Cause.—The cause of this decrease is attributed to the badness of the seasons during the last few years—it greatly affecting the breeding of beasts and agriculture, which are the trading resources of the country. The rapidly progressive steps taken by this trade during the first twelve years of its political existence, from 1830 to 1842, was mostly owing to the credit which a country, possessing such vast resources, easily procures, at its first outset in the commercial world.

Foreign Capital.—By means of foreign capital, borrowed at fifteen, eighteen, and even twenty per cent, agricultural proprietors, having carried on their operations to an unlimited extent, an epoch of pecuniary embarrassment had overtaken them, thus creating many failures, whilst others, not so unfortunate, were compelled to retrench their expenses and their purchases, which naturally was seriously felt by the exterior trade.

Amount of decrease per Countries.—In the following tables, showing the nature and value of the merchandises composing the trade of Venezuela, it will be more particularly remarked, that the trade of Denmark and its colonies has decreased in the whole 2,803,000 francs; that of France, 1,787,000 francs; that of Spain, 1,500,000 francs; and that of England, a little more than 1,000,000 francs. The trade with the Hanse Towns and Netherlands, has remained pretty much the same. The United States is the only country which has at all increased in its trade with Venezuela. It purchases in general inferior coffee, the better quality being consumed by Germany; of 3,000,000 of kilogrammes of the latter quality, being about one-fourth part of the total exportation of this article, Hamburg took 2,500,000 in the years 1843-44, the remainder went to Bremen; the Hanse Towns are the most advantageously placed in the trade of Venezuela. From 1831 to 1842, the French trade with this country greatly developed itself. During those eleven years, its envoys rose from the paltry sum of 120,000 francs to 3,161,000 francs! and its purchases at Venezuela, from 537,000 francs to 3,886,000 francs! No other country had increased its trade with Venezuela so rapidly and in so short a time. If this trade has fallen off from 1842 to 1844, it is not the only country which experienced at that time this kind of stagnation.

Denmark, or rather the Danish possession St. Thomas, has also experienced a similar decrease in its trade with Venezuela. In 1831 its total value amounted to 7,876,000 francs, in 1841 it was estimated at more than 9,000,000 francs, but in 1843 it did not exceed 4,297,000 francs. The Island of St. Thomas, a well-known entrepôt for the trade of Europe with the continent of America, loses much of its importance in proportion as the trade with this part of America becomes more *direct*. It is the same with the Island of Curaçao which greatly affected the exchanges of the Netherlands. Its transactions with Venezuela in 1831 valued 843,000 francs; in 1841, 3,140,000 francs; and in 1843 they suddenly fell to 2,374,000 francs; and although they were more considerable in 1844 than in 1843, nevertheless its trade with Venezuela seems gradually relaxing.

Several other countries of America have a small trade with Venezuela, which may increase in importance as their population progresses, and more particularly are distinguished under this head Mexico and New Granada. Sardinia and Belgium are also beginning to frequent its ports. If we compare the years 1842 and 1843, we find the importations of *tissues* during the latter period to have considerably decreased, whereas *specie* had greatly increased, this latter causing, no doubt, the fall in the *tissues*.

Exports.—Among the exports, *coffee, tobacco, indigo, cotton, and specie* have greatly decreased. Of *coffee*, the exports in 1841 amounted to 13,500,000 francs; in 1842 they fell to 10,113,000 francs; and in 1843 to 8,893,000 francs. The Venezuelan treasury depending principally upon the customs' duties, necessarily experiences a great reduction in its revenue.

Customs' Dues.—In the year 1840, when this republic had attained the height of its prosperity, these duties amounted to 9,000,000 francs; in 1843 they were estimated at only 5,669,000 francs, of which 5,276,000 francs were levied on the imports, or thirty per cent of the total value imported.

Imports.—Of 17,636,000 francs of imports, the ports of *La Guayra* received 9,738,000 francs; *Puerto Cabello* 2,984,000 francs; *Maracaybo* 1,922,000 francs; *Cumana* 812,000 francs; *Angostura* 631,000 francs, &c.

Exports.—Of 23,876,000 francs of exports, the ports of *La Guayra* contributed 9,184,000 francs; *Puerto-Cabello* 6,094,000 francs; *Maracaybo* 2,606,000 francs; *Angostura* 2,416,000 francs; *Maturin* 875,000 francs, &c.

Coasting Trade.—These six ports had more than seven-eighths of the whole Venezuelan trade; the others, such as *Barcelona*, *Guiria*, *La Vela*, &c., confined themselves more particularly to the coasting trade.

Cattle Trade.—*Maturin* monopolises the cattle trade.

TRADE OF VENEZUELA WITH FRANCE IN THE YEARS 1842, 1843, AND 1844.

The value of the trade of France is as follows (the direct operations only):—

Imported into France from Venezuela . . . 3,142,099 francs.

Imported into Venezuela from France . . . 3,348,235 „

Total . . . 6,491,034. „

In 1838 this trade did not exceed 4,500,000.

In the French imports, coffee, in 1842 (special trade), 1,203,824 francs (1,416,264 kilogrammes); cotton, 493,429 francs (274,127 kilogrammes); Indigo, 518,416 francs (32,401 kilogrammes); skins, raw, 305,422 francs (169,679 kilogrammes); cocoa, 174,933 francs (194,370 kilogrammes), &c.

In the French exports, silken tissues, 730,956 francs; cotton, 187,771 francs; wines, 164,589 francs; brandy, 118,633 francs; paper, books, and engravings, 150,834 francs; pottery, glass, and crystals, 106,510 francs; perfumery and soaps, 187,000 francs; cloths, 145,000 francs; mercery and fashions, 136,000 francs; linen cloths, 95,500; gold and silver ware, jewellery, manufactured metals, and Parisian industry, 148,000 francs, &c.

Navigation.—According to official documents, the navigation, in 1843, gave employment to fifty-one vessels, measuring 8477 tons, all French except five, giving an increase, in comparison with 1842, of six vessels, and 1314 tons; in 1844 there were only twenty-eight vessels, measuring 4315 tons, of which twenty-three were French.

Indianas and cotton-stuffs have been furnished, up to the present time, by England, Germany, and Switzerland. This latter country exports only indianas of middling quality. The Americans introduce their common cotton domestic stuffs into Venezuela.

Ordinary and fine linens are, in general, imported from England and Germany.

Woollen cloth comes principally from France, and also from England, Belgium, and Germany, of the ordinary qualities.

Silks are from France, England, and Germany. England imports but small quantities, generally of Indian *foulards*, and stuff for cravats and waistcoats; Switzerland imports plain ribbons; Germany copies French designs, furnishes stuffs and velvets of silk. Yet France exports to Venezuela all kinds of stuffs of silk, either pure or manufactured. Hardware comes from England and Germany; it is a very considerable article. Glassware almost exclusively from Germany. Real and false jewellery also from Germany. Delfware is imported by England.

Glass, which on account of the bad roads in Venezuela, cannot be transported but by a very few routes, is furnished, the common quality by Germany, and the fine qualities by France and England.

Furniture is imported by the Americans. It is imported in *pieces*, as a precaution against the difficult communications and the intensity of the heat.

Eatables arrive from America, Spain, and in small quantities from France.

Wine comes from Spain, America, and France. France exports to Venezuela the red wines of the Gironde in hogsheads or butts. The Spaniards and Americans furnish the sweet wines of Malaga and the red wines of Catalonia. The French wines of Languedoc are nearly analogous to those advantageously exported by the Catalonians. The trade of liqueurs is of some importance at Venezuela, and may yet be of much greater consequence; it is also a very good article for a cargo for navigation.

Soaps come almost exclusively from America; they find a market on account of their softness and low price.

Perfumes are almost exclusively from France.

Tanned goods are introduced by the French and Americans, the former bring skins and the latter the leather. This branch of importation has greatly diminished on account of the number of tan-houses established in the country.

Arms.—The low price of the German and Belgian weapons give them the priority, except rich weapons.

CHAPTER VII.

BRITISH CONSULAR RETURN OF THE TRADE OF VENEZUELA IN 1844-1845.

In comparing the value of the imports of the present year with the imports during the two previous years, there has been an increase of 12½ per cent, as respects 1843 and 1844; and a diminution of 26·7 per cent as respects 1840-1841, the year in which the amount of imports was greatest.

In the value of the imports from Great Britain, there has been an increase of 20 1·8 per cent as compared with the imports from thence in 1843-1844.

Their amount in 1843 and 1844, having been 203,764*l.*, and in 1844-1845, 244,773*l.*

In the general exports there has been a decrease of 6½ per cent, as compared with the exports in 1843-1844, and of 28½ per cent as compared with them in 1841-1842, the year in which the amount of exports was greatest.

As respects the exports to Great Britain there has been an increase in 1844-1845, of 14 7·10 per cent, the respective amounts being, in 1843-1844, 161,283*l.*, 1844-1845, 185,080*l.*

But there is a diminution of 1 1·8 per cent as respects 1842-1843, the year in which the exports to Great Britain were the greatest.

The statements hereafter furnish the particulars of the description and value of the principal articles of import and export, and of the amount of gold and silver coin imported and exported in 1844-1845.

Eight hundred and fourteen Venezuelan vessels, with a tonnage of 26,566 tons, entered the ports of the republic; and 1490 vessels, with a tonnage of 36,778 tons departed therefrom in 1844-1845; whilst 414 British and other foreign vessels, with a tonnage of 59,650 tons, entered, and 491 vessels, with a tonnage of 67,739 tons, departed therefrom during the same period.

Of the foreign vessels that entered fifty-six were British, with a tonnage of 9355 tons, and of those that departed, 119 were British, with a tonnage of 12,866 tons.

Of the total value of imports, say 793,877*l.*; 187,706*l.* were imported in Venezuelan vessels; and 606,170*l.* in British and other foreign vessels; and of the total value of exports say 894,745*l.*; 177,339*l.* were exported in Venezuelan vessels, and 717,406*l.* in British and other foreign vessels.

The rate of duties on the amount of imports chargeable with a duty was, in 1844-1845, 37½ per cent, it having been 35½ per cent in 1843-1844, and 34½ per cent in 1842-1843.

The duties on exports have been taken off since the 11th of May, 1844.

The following are the rates of duties on amount of imports paid in 1844-1845 respectively by the under-mentioned countries, including in the calculation the duties termed "subsidiary," and a duty on imports charged on the entrance of vessels at "La Guairia," on amount of imports chargeable with a duty: Great Britain, 32 2-3 per cent; France, 32 4-5 per cent; United States 53 4-5 per cent.

On amount including goods admitted duty free: Great Britain, 29 7-8 per cent; France 27 1-3 per cent; United States, 34½ per cent.

The duties on warehousing of goods amounted in 1844-1845 to 825*l.*

The annexed statement, shows the amount collected for dues and charges on shipping during 1844-45, to have been 9303*l.* 14*s.* 5*d.*

The minister of finance states in his report to congress that if the amount in 1845 of the national income, 89½ per cent was derived from duties on customs; such duties; therefore, bear the proportion of 71½ per cent to the total amount of national and municipal income of the year.

Notwithstanding the high rate of duties levied on imports into Venezuela, there is a very general clamour for their increase, and for the establishment of commercial restrictions and prohibitions upon the delusive assumption that such measures are the only panaceas, excepting that of raising another Anglo-Venezuelan loan, which can be adopted by congress and the country, for relieving the embarrassments of the necessitous and indebted agriculturists, and for affording, according to the Venezuelan popular theory, the indispensable protection to native industry.

This retrocession from the sounder notions of commercial and financial policy, hitherto prevalent in Venezuela, is the result of the excitement engendered by the establishment at Caracas in 1843, by two or three of the principal proprietors and directors of the so-called "National Bank," of a periodical designated as *El Promotor*, in which, with a view to personal and party objects, the most subversive principles were set afloat, and the most inflammatory language was directed against foreigners, the doctrines of commercial freedom, and especially against the laws which afford the only real legal security for commercial and money transactions in Venezuela in respect of establishments and individuals, not like the national bank, clothed with the extraordinary powers and privileges of the Venezuelan fisc.

From the appearance of this mischievous paper to the present time, the nation has been designedly kept in a state of morbid irritability against, and distrust of, foreigners; and, as a consequence, the illiberal Spanish colonial system of prohibition and restrictions has been openly upheld and advocated by the several contending parties, as the surest means of acquiring political capital.

Owing to this feverish and diseased state of the public mind, to the tardiness and want of confidence in a faithful administration of justice, and to the consequent increasing disregard and callousness of debtors concerning their character and commercial credit, the trade of the country is not generally considered, by competent judges, to be in a sound or healthy condition; and notwithstanding the increase of British imports, the trade is, in fact, fast dwindling into a species of retail trade in the hands of petty dealers.

Two long established commercial houses lately wound up their affairs. On doing this they declared "We have held on for a long time in doubt, in the hope of some favourable change, but, alas, to end in disappointment."

Neither of these commercial houses have been replaced by the establishment of other British firms.

The president, General Soublotte is fully sensible of the erroneous views taken by his countryman in respect to the question of commercial freedom, and the suicidal measures, by the adoption of which they vainly flatter themselves Venezuela will be enabled to place her trade and finances upon a sound and healthy footing.

The value of foreign merchandise imported into Venezuela in 1844-1845, in transit for New Granada, amounted to 132,216 dollars 97 cents, equal to 21,154*l.* 14*s.* 2*d.*; of which amount 118,432 dollars 71 cents, equal to 18,949*l.* 4*s.* 7*d.*, was introduced through the port of Maracaybo, and 13,784 dollars 26 cents, equal to 2205*l.* 9*s.* 7*d.*, through that of Angostura.

The amount of British merchandise through the two ports was as follows: through Maracaybo 47,339 dollars 26 cents, equal to 7574*l.* 5*s.* 7*d.*; through Angostura 4928 dollars 42 cents, equal to 788*l.* 7*s.*; total, 52,267 dollars 68 cents, equal to 8362*l.* 12*s.* 7*d.*

In addition to the ordinary and extraordinary duties on imports, included in the treasury and custom-house returns under those denominations, two other duties on imports are collected; namely, 1st, a "subsidiary duty" of two per cent on the amount of those duties on imports at La Guayra, and of four per cent at all other parts: 2ndly, two per cent on amount of said duties on imports at La Guayra, collected as a port charge on the "entrance of vessels;" the two duties being together equal to four per cent on the amount of ordinary import duties, with ten per cent additional, which, although termed an extraordinary duty, is, in fact, an ordinary duty, therefore the actual rate of duties on imports chargeable with a duty was, in 1844-1845, $37\frac{1}{4}$ per cent; it having been $35\frac{1}{4}$ per cent.

TRADE OF LA GUAYRA.

LA GUAYRA, the principal sea-port town of Venezuela, is situated in the province of Caracas, on the eastern shore of a small bay, and contains about 7000 inhabitants.

Vessels cast anchor in an open roadstead, exposed to the north-east wind, at a distance of from a quarter to half a mile from the wharf, where the holding ground is secure at a depth of from eight to twenty fathoms.

Pilots are not required on the entrance of vessels into this port.

The rise and fall of the tide is scarcely perceptible.

Stone, for ballast, is procured with difficulty, at a cost of from eight dollars (17. 5s. 7½d.), to twelve dollars (17. 18s. 4½d.), per barge-load of five tons.

In front of the custom-house there is a covered wharf about 300 feet in length for the embarkation and debarkation of passengers and goods, and close by on the beach is a fountain of fresh and wholesome water for the supply of vessels.

Cargoes of vessels are shipped or discharged by means of lighters carrying from four to four and a half tons.

The charge for lighterage is four dollars (12s. 9½d.) per load.

The cost of discharging is generally paid by the shipper, but for which he is reimbursed by charging ten per cent on the amount of freight, under the denomination of primage, five per cent of which is in fact for lighterage. The expense of loading is usually defrayed by the exporter.

Foreign merchandise or native produce is conveyed by porters between the wharf and merchants' stores, at an average charge of one rial or 4½d. a load; or, when a package is of such a weight or bulk as to require more than one porter, 9 cents, or 3½d. is paid to each man per journey.

As there is no lazaretto at this port for passengers or goods, vessels having to perform quarantine, anchor two or three miles to leeward of the town, and to avoid being placed in quarantine, a vessel must be provided with a bill of health, duly certified by a Venezuelan consul, or consul of a friendly nation.

Numerous accidents having occurred, both to passengers and goods, upon landing and embarking at the wharf, owing to the heavy ground swell in the roadstead, the municipality of this town, entered into a contract with an American engineer, to construct a breakwater, together with a small lighthouse at the point, and a building as an office for the captain of the port, for the sum of 275,000 dollars, 44.000l.

This breakwater was commenced in March, 1844, and is now rapidly drawing towards completion; but owing to an accumulation of sand on the inner side, washed in by the currents, unfortunately, it has not answered the expectations of the authorities or the engineer, and fresh works will have to be constructed to render it of any material or practical benefit to trade.

Small coasting craft of from about twelve to eighteen tons' burden, are able to anchor within its influence.

No reduction in the charge for the shipment or debarkation of goods has as yet been effected.

Since May, 1839, a duty of two per cent, to be calculated on the amount of tariff duties, with ten per cent addition on imports into La Guayra, has been collected under the denomination of a port charge on entrance of vessels, over and above the port due of 7 cents, 2½d., per Venezuelan ton on entrance. This is virtually a duty on imports, being paid by the owners or consignees of merchandise.

The proceeds are applicable to local purposes, and, at present, are exclusively devoted to the cost of the construction of this breakwater.

During the Venezuelan financial year, ending the 30th of June, 1844, this duty amounted to 14,442 dollars = 2311l.

A lighthouse due of 6 cents, 2½d., is recovered from national and foreign merchant vessels entering the port of La Guayra from a foreign port with or without cargo; but it is not levied on vessels arriving from another port of the republic.

With the proceeds of this fund it is intended to erect a lighthouse on the Roques; a dangerous group of rocks about seventy-eight miles to the northward of La Guayra, on which many vessels proceeding from St. Thomas and Puerto Rico, and to the United States and Europe, have been wrecked.

During the financial year, ending the 30th of June, 1844, the proceeds of this duty in La Guayra, amounted to 2140 dollars, 342l.

CARACAS, the capital of the republic and of the province of the same name, situated about 3000 feet above the level of the sea, is separated from the port of La Guayra by a range of mountains rising abruptly from the shore, the principal communication between which is, at present, by means of a mule road of about five Columbian leagues in length, of 6666 feet each league, and 3000 feet at the highest point above the plain upon which Caracas stands, or 6000 feet above the sea.

A carriage road between the capital and this port for some years in the course of construction, has been opened since the commencement of the present year.

It is about two leagues longer than the old or mule road; and before it can be rendered safe and convenient for the general purposes of traffic, a large outlay and some years will be required.

Owing to its present defective state, little, or no reduction has hitherto occurred with respect to the ordinary charges for carriage by mules, since it has been opened.

Articles of furniture, or packages of such a bulk or weight, as previous to its opening could only be conveyed to Caracas on the shoulders of men at an enormous cost, are now taken up at a very much lower rate; and also bales of goods, crates of glass and earthenware, &c., instead of requiring to be broken up and repacked in smaller parcels for conveyance by mules, are now carried up entire in carts.

Of late years the charge for the conveyance of cargoes has averaged about 1 dollar 50 cents, 4s. 9½d. per mule-load of two quintals = to about 203lbs. English; but at the present time, a bag of coffee, weighing a quintal, or equal to half a cargo, is brought from Caracas for 31½ cents = 1s.

Besides the before-mentioned import duty of two per cent, a subsidiary duty of two per cent on imports, calculated in the same manner on goods imported into La Guayra, has been levied since July, 1839; and the proceeds of which have been exclusively applied to the construction of the carriage-road between Caracas and La Guayra.

The proceeds of this duty during the financial year 1843-1844, amounted to 14,442 dollars = 2311l.

Besides these amounts, the sum of 40,000 dollars = 6400l. out of the national revenue has, since October, 1842, been applied to the construction of this road.

There are two daily posts between La Guayra and Caracas, from the latter other posts are periodically despatched to different parts of the interior.

A private subscription packet sails weekly between La Guayra and Puerto Cabello.

Packets with mails for the West Indies and England sail from La Guayra on the 7th and 21st of each month; whilst the mails from the West Indies and England are usually delivered at La Guayra on the 12th and 28th of each month, or on the twenty-sixth day after the packet's departure from Southampton.

Both the National Bank of Venezuela (so called) and the Caracas branch of the British Colonial Bank, have agents at La Guayra.

Weights and Measures.—123 lbs. (libras) Spanish = 125 lbs. avoirdupois; 98,392 ditto = 100 ditto; 25 ditto = 1 arroba; 100 ditto = 1 quintal; 110 ditto = 1 fanega; 108 yards (varas) Spanish = 100 yards English; 3 feet (pies) Spanish = 1 vara; 12 inches (pulgadas) Spanish = 1 foot.

The English gallon is used for the admeasurement of liquids. Four gallons are considered as one arroba. Five wine-bottles as one gallon.

Tonnage.—About 140 Venezuelan tons = 100 tons English; about 112½ ditto = 100 tons United States; and about 134½ ditto = 100 tons French.

The total amount of port dues on vessels entering and clearing with cargo from La Guayra may be estimated at 4s. 6½d. per ton, British admeasurement.

IMPORTS into La Guayra during the Years 1840 to 1844 inclusive.

NOTE.—The total number of crews of British vessels that arrived at La Guayra during the Quinquennium, ending the 31st of December, 1841, was 1301, and the yearly average 260.

100 tons. { British register.
United States ditto
French admessurement. } are equal to about { 140
112½
131½ } tons, Venezuelan admessurement.

The returns for the years 1840, 1841, 1842, and 1843, only include vessels arriving from British and foreign ports; but the return for 1844 includes all vessels that arrived at La Guayra from other parts of the republic, at which they may have discharged a part of their inward cargoes, as well as those arriving from British or foreign ports. The following statement gives the number of arrivals, with the amount of Venezuelan tonnage and number of crews respectively, from British ports only, during the year 1844: "Twenty-five vessels of the burden of 5779 Venezuelan tons, and manned by 261 seamen."

The returns, No. 2, of British and foreign trade, transmitted annually from this vice-consulate to her majesty's legation at Caracas, and from which this statement has been compiled, do not contain any particulars relating to the number of arrivals of Venezuelan vessels, the amount of tonnage, or the number of their crews during the two years, ending the 31st of December, 1841, as such details have been principally included under the head of "Danish" shipping; vessels under the Venezuelan flag having been chiefly employed during that period in the trade between St. Thomas and this port.

DEPARTURES, ending the 31st of December, 1844.

NOTE.—The total number of crews of British vessels that departed from La Guayra during the Quinquennium ending the 31st of December, 1844, was 1206, and the yearly average was 251.

100 tons. { British register. 140 }
 { United States ditto. 112½ } are equal to about { 112½ } tons, Venezuelan admeasurement.
 { French admeasurement. 134 }

The returns for the years 1840, 1841, 1842, and 1843, only include vessels departing to British and foreign ports; but the return for 1844 includes all vessels that departed from La Guayra to other ports of the republic, at which they may have taken in a part of their outward cargo, as well as those proceeding to a British or foreign port. The following statement gives the number of departures of vessels, and the amount of Venezuelan tonnage to British ports, only during the year 1844: Twenty-five vessels of the burden of 5779 Venezuelan tons.

The returns, No. 2, of British and foreign trade, transmitted annually from this vice-consulate to her majesty's Legation at Caracas, and from which this statement has been compiled, do not contain any particulars relating to the number of departures of Venezuelan vessels, the amount of tonnage, or the number of their crews, during the two years, ending the 31st of December, 1841, as such details have been principally included under the head of "Danish" shipping; vessels sailing under the Venezuelan flag having been chiefly employed during that period in the trade between St. Thomas and this port.

OBSERVATIONS.—The import and export trade of Great Britain is almost exclusively confined to the port of Liverpool.

It is supposed that about a quarter of the total amount of British goods imported into La Guayra, are on account of German houses; they also import linens and baizes, but not to so large an amount as cottons.

British capital enters into these speculations.

The principal British mercantile firms of La Guayra are in the practice of charging on consignments of goods from twelve to twelve and a half per cent, for commission, guarantee on sales, warehouse, collection, &c., and returns of proceeds are made at ten months.

IMPORT Trade of La Guayra, in British and Foreign Vessels, during the Year ending the 31st of December, 1845, compared with the Imports during the Year 1844. The Exchange has been calculated at the rate of Six Dollars and a quarter to the Pound Sterling.

The voyage up the Orinoco to Angostura is made, on an average, in from twenty to twenty-five days; they descend in from five to fifteen days.

During the year 1844 the trade of Angostura shows a vast decrease as compared with the previous four years, which averaged in imports 68,160*l.* sterling, whereas in 1844 this has fallen to 22,793*l.* The decrease may be attributed to the following causes, viz.:

The extensive stock of goods on hand from the importations of previous years, which were infinitely more than the consumption of the country required.

The salutary change of reduced and more limited credits introduced into mercantile transactions.

The average value of exports during the last four years was 100,203*l.* sterling. In 1844 it was 92,354*l.*

British manufactures are here more in demand than those of any other country. The exportation of cattle to the British colonies is considerably on the increase.

VALUE of Merchandise Imported at the Port of Angostura from various Countries, during the Year ending the 31st of December, 1844.

PORTO CABELLO.—There arrived at this port, in 1844, from various parts, thirty-two British vessels, 5455 tons, 337 men; invoice value of cargoes, 337,778*l.*: value exported by these vessels, 44,733*l.* The latter consisted chiefly of copper ore, coffee, some cotton, and cattle. There was a falling off this year in the amount of imports, 6645*l.*; and in the exports, of 12,401*l.* of copper ore, the last shipment was made in June, since which the mines, for the present, have been abandoned. The increase in the exportation of coffee, is about 600 tons. The falling off in the export of cotton is nearly 6000 quintals; the low prices in Europe, and the contributions levied on its export for Venezuelan local objects, check the cultivation. The same remark applies to indigo.

Articles exported from Porto Cabello, in 1844 :—copper ore, 505 tons; coffee, 11,032 quintals; cotton, 3759 packs of 100 lbs.; fustic, 539 tons; sugar (Muscovado), 471 quintals; hides, 1919; bark, forty-four tons; lignumvitæ, ten tons; dividivi, ten tons; cedar logs, seventy-one tons.

CUSTOMS' REGULATIONS—TARIFF OF DUTIES—FINANCES OF VENEZUELA.

Ports of Import and Export.

ARTICLE I. The following ports are hereby declared to be open for the purposes of importation and of exportation :

Angostura in the province of Guayana; Cumana, and Carupano in the province of Cumana; Barcelona in the province of Barcelona; La Guayra in the province of Caracas; Puerto Cabello in the province of Carabobo; La Vela in the province of Coro; and Maracaybo in the province of Maracaybo.

II. The undermentioned ports are hereby declared to be open, only for the importation of goods for their own consumption, and for exportation: Pampatar and Juan Greigo in the province of Margarita, and Guayra and Maturin in the province of Cumana.

III. The sub-custom-house established at the shipping station of Gaza is hereby opened for the purposes of exportations to foreign countries, and at this station may be despatched all vessels desirous of loading at places from the Port of Angostura into the said station and on either side of the Orinoco.

IV. The custom-houses which are limited to despatch goods for the consumption of the port at which they are situated, may not grant permits for the conveyance of goods to other places.

§ The custom-house of Guayra is hereby excepted from this provision; and on the contrary, is empowered to grant permits for the conveyance of foreign goods to places not open to trade which communicate by rivers with the Gulf of Paria.

V. The executive government is hereby empowered to continue open for the purposes of exportations any of the ports which it may think proper of those that are closed by the present law.

VI. The law of the 22nd of April, 1839, respecting the ports open to trade in Venezuela is hereby repealed.

TARIFF OF CUSTOMS' DUTIES.

The modifications made in 1841, and still in force in the customs' tariff of Venezuela, are unfavourable to commerce. The basis of duty on goods not admitted free, is an *ad valorem* duty of thirty per cent: the importation of salt, cocoa, sugar, and molasses, is prohibited; the importation of spirits, extracted from sugar-cane, unless imported in bottles, is likewise prohibited. There are many articles subject to a specific duty; besides the import duty of thirty per cent, there is also levied ten per cent, calculated upon the amount of the duties, which raises the duty, *de facto*, to thirty-three per cent.

All duties on exports from the ports of the republic cease.

CLASS I. The following articles are admitted free from duty:—

Bricks, bran, moulds for sugar mills, living animals of all kinds, ploughs, peas, rice, oats, scarfs for the use of churches, drills, casks and barrels, pumps of wood or iron for irrigation, coal, carts or waggons, wheelbarrows, surplices and other garments for priests, collections or books of music or drawings, and paper prepared for music or drawings, columns of all kinds for buildings, iron cooking stoves, jackets, staves, juniper berries, baggage of passengers, statues of all sorts, copper or iron sugar or still boilers, Dutch ovens, beans, engravings, mathematical or other scientific instruments, boats of iron or wood set up or in pieces, lentils, parts of sugar mills, printed books and maps, files, Indian corn, apples, cotton gins, machines for dredging, mining, spinning, weaving, and shelling corn, steam engines, gold and silver, pans of copper, brass, or zinc, printing paper, potatoes, carriage and cart wheels, seeds, brushes.

FINANCES OF VENEZUELA.*

	dollars	cts.	£	s.	d.
Home department	1,073,748	55	=	171,799	15 5
Finance department	1,150,656	00	=	184,184	19 3
Foreign affairs	32,400	00	=	5,184	0 0
War	575,359	29	=	92,057	10 0
Navy	91,291	48	=	14,606	12 10

Total expenditure . 2,923,455 32 = 467,752 17 6

The actual expenditure of the republic, in 1846-1847, will not greatly exceed the official estimates of its income for the same period; namely, 2,076,202 dollars 68 cents, equal to 332,192l. 8s. 7d.

In these estimates are included the sum of 220,000 dollars, equal to 35,200l, for

* The exchanges have been calculated at the rate of six dollars and a quarter to the pound sterling.

payment of a year's dividend on the Anglo-Venezuelan loan; and furthermore, 20,000 dollars, equal to 3200*l.*, for the payment of a year's dividend on the new Venezuelan bonds, issued in part payment of Mr. M'Intosh's claim.

The usual power to apply surplus revenue to the redemption of the foreign debt, of which the executive government was deprived last year, has not been granted to it by the present law; and looking at the increasing jealousy and prejudice against foreigners in Venezuela, I doubt much if this power will be again conferred upon the executive.

However, the usual amount for the gradual redemption and payment of the dividends on the home debt, namely 152,850 dollars, equal to 24,456*l.*, has been allowed; and, as many members of congress are holders of the stock of this debt, there is no likelihood of the power or means for its redemption being diminished or withdrawn by congress.

The revenue from customs' duty, the chief resources, and the mine revenues, are estimated as equal to the expenditure, as Venezuela has hitherto maintained her public credit.

CHAPTER VIII.

MARITIME TRADE OF THE REPUBLIC OF ECUADOR, THROUGH ITS ONLY PORT OF GUAYAQUIL, FOR THE YEAR ENDING THE 31ST OF DEC., 1844.

At this port the whole trade of the year has been less than that of the preceding, owing to the continuance of the yellow fever, and to a failure in the crop of cocoa.

The fever kept away from the port many of the traders of the interior, where the chief part of the merchandise imported is consumed, and to the same cause may be attributed the smaller number of British and other foreign vessels that have entered, as besides the risk of the epidemic, they are subjected to quarantine in the other ports of the coast when proceeding from this; national vessels, therefore (the crews of which having undergone the disease are not supposed to be any longer exposed to it), have had a larger portion of the trade of last year.

Of the other exports it is only in cotton that there is much difference.

	lbs.	£
1843—Cocoa exported.....	15,338,970	value 170,433
1844 " "	8,565,500	" 105,788

Of the merchandise imported during the last year there has been a falling off in European manufactures, principally of the finer qualities of cotton, and woollen, and of silks, owing to the continuance of the *mourning* which the people have been kept in by the ravages of the epidemic, but the importation of liquors and articles of consumption for the table (chiefly Spanish) have been unprecedented.

It was decreed, in 1845, to augment and encourage the ship-building establishment at Guayaquil, by exempting all vessels built there from tonnage and anchorage dues, and the partial reduction of the duties on merchandise imported by such vessels. Foreign vessels to pay four reals, or about two shillings per ton; and every vessel of 50 tons, 8 dollars; from 50 to 100 tons, 14 dollars; from 100 to 150 tons, 16 dollars; from 150 to 200 tons, 20 dollars; from 200 to 250 tons, 22 dollars; from 250 to 300 tons, 24 dollars; from 300 to 400 tons, 26 dollars; from 400 to 500 tons, 28 dollars; above 500 tons for every 100 tons, 2 dollars. Value of a dollar about 4s. 3d.

CHAPTER IX.

STATISTICS OF PERU.

WE are unable to bring forward any regular account of the statistics of Peru. The uncertain, ignorant, anarchical character of the government, has prevented any systematic returns being made; notwithstanding that such returns are insisted upon being prepared by the republican constitution of the state: it is not, however, surprising, that this constitutional law should, like the constitution itself, become a nullity. A people which could have endured the absolutism of a Gamara as president, is certainly not yet intelligently educated for self-government, nor for an appreciation of a comprehension of true civil liberty, or of sound commercial and fiscal legislation.

The effects of such an unprepared state for self-government, have been a course of pernicious administration, in regard to national industry and trade.

President Gamara established monopolies, and constantly interfered with the regular course of labour, enterprise, and trade.

He caused the shops and trades to cease their occupations, while his national guards, as he called them, were drilling; in order that those who did not belong to that body, especially foreigners, might be deprived of profiting by the hours when the national guards were acting as soldiers.

The coin was debased by alloy in various degrees. Foreigners, and especially British merchants, have suffered greatly by this debased coin. Exclusive of this, forged coin is prevalent; and valueless base metal is abundantly circulated.

False coin has even been issued, as is well known, from the public mints, as well as by private forgers.

Monopolies of the Guano trade, saltpetre, tobacco, salt, &c., were favourite schemes adopted by Gamara, and unfortunately since he has ceased to rule, a more enlightened spirit does not appear to direct the administration.

One person obtained a monopoly of the exclusive export of copper bars from the mines of Lima. Foreigners were by a decree prohibited from fishing on the Peruvian coasts, under the penalty of confiscating their vessels.

By a decree dated the 29th of July, 1840, guilds of trades were established, to be

composed of all individuals who shall exercise in Lima any craft or manufacturing trade; the object of the formation of these guilds was by compelling foreign artisans who may exercise any craft or trade in Lima, to become members of a guild, to subject them, under the plea of municipal regulations, to the same *forced loans* and *military exactions*, and requisitions to which the native members of such guilds are respectively subjected.

On the 14th of August, 1841, the government of Peru granted to Mr. William Wheelwright, for a period of ten years, the exclusive privilege to navigate vessels propelled by steam, or by any other mechanical power, along the coasts and in the ports of Peru.

The time for the duration of this privilege is to be counted from the period when any of Mr. Wheelwright's steam-vessels arrived in the Pacific; and of which the *Peru* actually arrived at the Chilian port of Talcahuano, on the 21st of September the same year; another, the *Chile*, arrived on the 5th of October. Both vessels entered Valparaiso on the 15th of that same month, and one of these, the *Peru*, arrived at Callao on the 3rd of the following month of November. —(See Pacific Steam Navigation hereafter.)

The government of Bolivia also addressed an order, under date of the 15th of October, to the governor of the littoral province of La Mar, directing him to facilitate, by all means in his power, the despatch of the steam vessels at the only port of Bolivia, La Mar or Cobija, and to allow of pontoons being thereat established, free of all duties, for the deposit of coals.

TRADE AND NAVIGATION OF PERU.

In order to show the progress or decline of trade in Peru, we introduce the following

RETURN of the Value, free on board at Cadiz, of Spanish and Foreign Productions imported into Peru in each Year from 1781 to 1795, both inclusive.—Calculated at the Exchange of 48s. per Dollar.

YEARS	Value of Spanish Produce.			Value of Foreign Productions.			Total Value.		
	dollars, etc.	£	s. d.	dollars, etc.	£	s. d.	dollars, etc.	£	s. d.

Annual Average Amount	5,200,000	0	1,000,000 11 0	600,000	0	120,000 0 0	5,800,000	0	1,120,000 11 0

NOTE.—In the annual amount of the exports is included the amount of the money exported to China and the Philippine Islands, and also the amount of the money exported on account of the royal treasury. On account of the war, neither money, nor produce, was exported to Europe from 1775 to 1781, both inclusive, and only a very inconsiderable amount in 1781, which will account for the large amount in 1784. Subsequent to the year 1793, shipments of coca and bark were effected direct from Guayaquil to Callao, which will account for the falling off in the amount of produce exported from Peru during the years 1794 and 1795.

An Approximate Calculation of the Value of European, United States, and Asiatic Produce and Merchandise Imported into Peru and Chili, in 1837.

	dollars.	£
Produce of Peru or Bolivia exported to Europe and the United States	7,327,548	1,455,899
Produce of the States of the Equator, New Granada, and Central America, on account of European, Asiatic, and United States importations into Peru	299,820	59,964
Total	7,627,368	1,515,863

The number of yards of British bleached cottons imported,

	Yards.
In 1839, was	2,237,316
„ 1840, the number amounted to	5,406,302
Showing an increase in 1840, of	3,078,686

The number of yards of British gray cottons imported,

	Yards.
In 1839, was	2,482,000
„ 1840, it was only	1,719,548

Occasioning consequently a decrease in 1840 of 762,452

In United States manufacture, say gray cottons, or domestics, there were imported,

	Yards.
In 1839	1,323,340
„ 1840	2,087,568

Thereby showing a nett increase of . 764,228

The increase, however, is only visible in bleached cottons, as the gray cottons imported from England and the United States together, amount nearly to the same quantity for the two years, viz.:

	1839.	1840.
British	2,482,000 yards	1,719,548 yards.
United States	1,323,340 „	2,087,568 „
Total	3,805,340 „	3,807,116 „

The total import of bleached and unbleached cottons, in 1839 and 1840, stands therefore thus:

	1839.	1840.
Bleached	2,327,316 yards	5,406,002 yards.
Gray	2,482,000 „	1,719,548 „
American	1,323,340 „	2,087,568 „

Total . 6,132,656 „ 9,213,118 „

Total increase in 1840 over 1839, 3,080,462 yards.

	pieces.
In 1839, there were imported of printed cottons	78,174
„ 1840	188,151

Being an increase in 1840 109,977

Which, estimated at 3 dollars = 12s. a piece, makes the value of the increase 329,231 dollars = 65,986l. 4s.

Cotton drills imported from the United States were preferred to those of Great Britain.

Cotton prints.—The Americans are improving in this manufacture, though it is not likely that, for many years to come, they will be able to compete with the British manufacturer.

Lincas from Ireland are daily increasing in consumption, and have nearly driven out of the market German and French *Bretagnes*.

The export of Alpaco wool has continued to increase.

	quintals.	£	£
In 1838, there were exported	4,593	at 5 =	22,965
„ 1839	8,555	„ 6 =	51,330
„ 1840	13,000	„ 5 =	65,000

The export of nitrate of soda is becoming more valuable as a return:—

	quantals.
In 1838, there were exported	73,310
.. 1839	113,780
.. 1840	176,870

The importations of quicksilver,

	flasks.	quintals.
In 1839 were	2203	1322
.. 1840	4625	3491
Increase	2452	1899

Twenty-seven British vessels arrived in Peru during 1840, from ports in Great Britain:—7 direct to Arica from Liverpool; 1 to Arica, calling first at Valparaiso, from Liverpool; 16 from Liverpool direct to Callao; 3 from London to Callao, calling first at Valparaiso—total 27. 34 arrived in 1839, and 14 only in 1838.

The value of British cargoes in 1840 was estimated at 1,190,000*l.*, from which deduct 60,000*l.* for remnants of cargoes sent on to Central America and Mexico, and there remains 1,130,000*l.*, to which must be added the sum of 500,000 dollars = 100,000*l.* value of British goods imported into Peru under the flags of all nations, from the deposit warehouses in Valparaiso, making the total amount of British imports consumed in Peru in 1840 = 6,150,000 dollars = 1,230,000*l.*

The tonnage of Peruvian shipping amounted at the latter end of 1840, to 6657 tons; and the number of Peruvian vessels to fifty-six, namely—two ships, two barques, fifteen brigs, sixteen brigantines, three cutters, two pilot-boats, sixteen schooners; fifty-six in all.

About one-half of their crews consist of English and American seamen, but by a Peruvian law, which is almost always evaded, no foreigner can be owner or master of a Peruvian vessel.

The capital employed in the import trade with Peru in 1840 was estimated at 6,900,000 dollars, equal to 1,380,000*l.*

The revenue of the Custom-house of Callao, on British imports, in 1840, yielded a gross sum of 1,200,000 dollars, equal to 240,000*l.*

The French, German, and American trade, had also considerably increased, as compared with its amount in 1838 and 1839.

Several French cargoes arrived, of which some were valuable, the direct importations from France, chiefly to French shopkeepers, have been greatly on the increase.

As an approximate calculation, the annual value of the French import trade in 1840, with Chile, Bolivia, Peru, Ecuador, west coast of New Granada, Central America, and Mexico, may be stated at 3,000,000 dollars, equal to 600,000*l.*

This calculation has been made by Mr. Perrin, the French consul at Callao.

From Germany there have been no direct importations, and the business done, by shipments from Valparaiso to Callao of German manufactures, has been considerable, and two vessels direct to Valparaiso from Hamburg afterwards came down the coast.

The commerce of Spain continued gradually to increase, but a large proportion of the quicksilver imported into Peru passes through British hands on British account.

From the United States some valuable cargoes have been introduced in 1840.

The value of foreign goods imported from the deposit port of Callao into Guayaquil, are paid for in produce of the Ecuador, and in remittances in gold in coined ounces.

With Central America the trade to Callao may not, perhaps, have been so extensive during 1840 as in former years, which probably may have had its cause in the continued state of anarchy in that republic.

With Mexico, the trade of Peru had been at least equal in amount to that carried on in 1839, and no alteration appeared in the trade with California.

The Chilean trade with Peru has considerably increased, especially in the exchange of the productions of the two countries with each other.

From Asia no direct shipments to Peru have been made, but two cargoes from China arrived at Valparaiso towards the end of 1840, of which the whole assortments for Peru

were purchased at Valparaiso, and sent down to Callao, and which promised to yield to the purchaser a fair profit.

RETURN of the Exports from Peru to Europe, and the United States, during the year ending the 31st of December, 1840.

— alpacas	16,500	15	3 0	412,500	82,500 0

NOTE.—Of the above quantity of bark, 531 quintals were for England; 1131 ditto for France; 74 ditto for United States; total, 1631. The remaining quantity, amounting in value to 4000½, is not given, but the difference was divided among the same countries.

Out of the above sums, bullion, specie, to the value of 747,302½ sterling, was exported from Peru to Great Britain, to which must be added the returns in bills, 30,000, thus making the total amount to Great Britain alone 777,302½ sterling, and the remainder 784,564½ sterling to other countries.

Chinchilla, 2,000 dozen skins to England; 11 ditto to France; total, 2,011 dozen.
 Copper ore, 26,333 quintals to England; 2,000 ditto to France; total, 11,700. Copper in bars, 1129 quintals to France; to Mediterranean, total, 1,231.
 Cotton, 26,000 quintals to England; 4,000 ditto to France; 2,132 ditto to Genoa; 2,174 ditto, uncleaned or so ditto in seed, to Great Britain and other countries.
 Hides, 1649 hides to England; 146 ditto to United States.
 Horns, none exported.
 Nitrate of soda, 176,870 quintals to England; 31,110 ditto to France; 6,600 ditto to the United States; 6,600 ditto to Hamburg; 7,800 ditto to other countries.
 Sugar. No sugar was exported to Europe during 1839, the market on the coast having been found, principally Chile, more advantageous.
 Wool, vicuña, exported to Great Britain only. Ditto, sheep's, 23,731 quintals to England; 30 ditto to France; 143 ditto to United States; 525 ditto to Hamburg. Ditto, alpaca's, exported to Great Britain only.
 Tin, from Bolivia, 147 quintals to England; 3020 ditto to France; 713 ditto to United States; 310 ditto to the coast.

Report on the Trade within the Consulate of Islay during the year 1843.

Imports.—This year presents the anomaly of a decrease in the value of British imports of 40,000*l.*, with an increase of nearly 4000 tons of shipping, entered in the port. The reason for this apparent inconsistency, was the diminished demand for British manufactures in the interior of Peru, on account of the continued revolutions and civil wars which have well nigh beggared all classes of society.

The *grano bubble*, that excited at first the cupidity of numerous speculators, having burst, has been the cause also of great and serious losses to several persons who entered into this trade, with hopes of realising speedily large fortunes.

The Peruvian government took advantage of their avidity, but the country has reaped no benefit whatever from this unexpected source of revenue, the whole proceeds having been swallowed up by a horde of government *employés*, jobbers, and speculators, in the capital.

The French trade has suffered equally, and is reduced to a very low ebb.

Exports.—The following is a sketch of the exports from Islay, in 1843, from official and private data.

Hard Dollars—To England, 79,453 dollars. *Bars Pina, and Old Plate*, 20,980 marks, at 9 dollars, 209,820 dollars. *Gold*, 9870 marks, at 17 dollars, 167,790 dollars. *Peruvian Park*, to England, 171 marks at 10 dollars, 6960 dollars; to France, 234 marks, 9660 dollars. *Ship's Wood*, to England, 85934 marks, at 10 dollars, 85,934 dollars; to France, 157,440 marks, 157,440 dollars; to Hamburg, 188 marks, 2880 dollars. *Alpine Wood*, to England, 5935 1-5 marks at 26 dollars, 238,315.1 dollars.

Vigonia Wood, to England, 6740 lbs., at 1 dollar, 6740 dollars. *Vigonia Skins*, to England, 2120 skins, at 6 shillings each, 1590 dollars.—Total value, \$84,416.5 dollars = at exchange, 48*d.* sterling, £175,883 *Us. 6d.*

BRITISH and Foreign Trade within the Consulate of Islay, during the Year ending the 31st of December, 1844.

Ballast duty, per ton	0 2	0 1 0	0 1	0 0 0

Vouchers are given for all the above charges when required.

The advantages enjoyed by Peruvian vessels over those under the British flag, are:—

First.—The coasting trade.

Secondly.—In the whale-fishery. All whale-oil caught under the Peruvian flag is free of duty, while that caught under the British flag is subject to a duty of twenty-five per cent, on a valuation of three dollars and a half (fourteen shillings sterling) per 100lbs. on black fish oil; and to the same duty on a valuation of ten dollars (two pounds sterling) per 100lbs. of sperm oil.

Thirdly.—Gold exported is subject to a duty, under the Peruvian flag, of three-quarters per cent; under the British flag, of one per cent.

Fourthly.—Silver exported under the Peruvian flag, three and three-quarters per cent; under the British flag, five per cent.

Fifthly.—All merchandise coming direct from Europe, Asia, and North America, in a Peruvian vessel, is allowed to pay twenty per cent of the duty on her cargo in documents of the exterior and interior acknowledged national debt, if consigned to a foreign house, and thirty per cent, if consigned to a Peruvian house; whilst a British vessel bringing the same merchandise is allowed to pay ten per cent only of the duty on her cargo in such documents.—*Limit, February 1, 1845.*

CUSTOMS' REGULATIONS AND TARIFF OF PERU.

According to the Law in force, Callao is declared to be the only port of unlimited deposit, both as respects classes of goods, their port of shipment, and the time of their deposit; but goods may be deposited at the ports of Arequipa and Paita, for the period of two years, and at Islay and Huanchaco for that of eight months.

It was enacted, by the law of 1840, that the retail trade, and the whole trade of the interior of the country, shall, after the expiration of eighteen months, be alone carried on by natives and citizens of Peru, whose names shall be duly inscribed in the *Commercial Register*.

That mercantile houses for the import of goods can alone be established at Arica, Tacna, Ilay, Arequissa, Callao, Lima, Huanchaco, Trujillo, Payta, and Pura; *with the limitation, however, of selling only by invoices, or unopened packages, and on no account by single pieces.* This Article is a violation of the British treaty.

By the same law, the duty of five per cent actually on diamonds and precious stones, jewellery with stones or without, fine pearls, wrought gold and silver, and pocket watches, has been reduced to three and a half per cent; namely, three per cent to the state, and half per cent for ways and means.

The tax, called "*arbitrios*," or ways and means, is collected by the *consulado*, and is exclusively set apart for the payment of the *interest of the home debt*.

All *linen, woolen, and cotton goods*, are to pay twenty-five per cent, as follows: twenty-three per cent to the state, and two per cent for ways and means; and those which formerly paid thirty per cent, are now charged with a duty of thirty-five per cent and forty per cent; namely, thirty-two and thirty-six per cent to the state, and three and four per cent for ways and means.

Duty on playing-cards, 3 rials=1s. 6d. the dozen packs; namely 2½ rials to the state, and ½ rial for ways and means. Soap duty, 7 dollars=1l. 8s. the 100 lbs.; namely, 6 dollars=1l. 4s. to the state, and 1 dollar=4s. for ways and means. Tobacco duty, 35 dollars=7l. the 100 lbs.; namely, 30 dollars to the state, and 5 dollars for ways and means.

The duty on flour, 3 dollars 5 rials=1l. 6d.; namely, 2 dollars 4 rials=10s. to the state, 4 rials=2s. for ways and means, and 5 rials=2s. 6d. for establishments of public charity. Wheat, the fanega of 135 lbs., 1 dollar 6 rials=7s.; namely, 1 dollar 2 rials=5s. to the state, 2 rials=1s. for ways and means, and 2 rials=1s. for establishments of public charity.

The following duties will be levied on the importation of foreign merchandise; viz., three per cent to the state, and one half per cent to the *arbitrios* (city-tax); on gold and silver manufactures, real jewellery, with or without stones, clock-work, watches, real pearls, precious stones of every kind, five per cent to the state, and one per cent to the *arbitrios*; amber, gold and silver thread and wire, leaves, and spangles, civet, musk, eleven per cent to the state, and one per cent to the *arbitrios*; on timber, iron and steel raw.

The following articles shall pay the same duties when they are intended for the consumption of the population of the *first rate* ports of the republic: anchors, oars, biscuit, wood, handspikes, levers, &c. pitch and tar, cordage, iron chain cables, nails of every sort, travellers (a kind of block), hooks and grapnels, ships' cooking utensils, tides, sheet copper, tin, iron, sheet iron, linseed oil, tale lanterns, lard, paint, sheet lead, pulleys, salt-fish, blocks, grindstones, resin, sand minute glasses, sea lead and line, tobacco for chewing, tissues for sails and flags, salt meat (better known by the name of *carne*), &c.

The articles enumerated above, sent from the magazines and warehouses of the Customs to Lima, or to any other place of the state, will pay the whole of the duty named in this article, or twenty-one per cent to the state and two per cent to the *arbitrios*.

Paying sixteen per cent to the state, and two per cent to the *arbitrios*:

Tissues of cotton; blonds and tulles.

„ flax; cambric; handkerchiefs in pieces.

„ „ lace and tulles.

„ „ *Estopilles*.

„ silk; and all other articles except *tissues* properly so called.

„ „ blonds and tulles.

„ „ „ others with gold or silver.

„ „ „ „ others

Paying twenty-three per cent to the state and two per cent to the *arbitrios* :—

Tissues and all articles not named in the foregoing or following tables, of cotton, of wool, of flax.

Paying thirty-two per cent to the state, and three per cent to the *arbitrios* :—
Trunks for travelling, musical instruments, pianos; furniture—chairs and sofas, and their frames, beds, iron camp beds, desks; skins and leather—*cueros* of every kind, whole or in pieces—with or without hair, manufactured or tanned, white or dyed.

Paying thirty-six per cent to the state and four per cent to the *arbitrios* :—
Hats and caps of every kind, boots and shoes, clothes (made up), furniture of every kind (except chairs and chair frames), pastes as provisions, vermicelli and other sorts, of every kind of flour, carriages of every kind. —

The articles enumerated in the following table will pay *fixed* or *specified* duties :—

The following articles are *exempt* from *import duties* :—Animals of every kind (alive or not), gold and silver (in paste, bars, powder, or specie), wood (hoops—*flejes*, masts, staves—*duelas*), maps and globes, geographical and marine maps and charts, charcoal, sales of freights to the profit of citizens of the state, engravings and drawings, elements of drawing in books, engravings in sheets, grain (other than that destined for sale) seeds, plants (others than those destined for sale), clothes and other dressing apparel, specimens of natural history, curiosities, &c., coals; surgical, mathematical, and scientific instruments; machines and tools—*maquinas* of every kind, alembics and others, and drawings or models of machinery, *herramientas* for mechanics, imported by workmen establishing themselves in the country, and in a moderate quantity; mining tools, tools; mercury, mercury—*azogue* (quicksilver), music in sheets or bound in volumes, church plate and ornaments; tombstones and other stones cut for paving, &c.; printing presses, &c., sculpture, statues.

The following articles are *prohibited* to be *imported* :—Fire-arms of every kind, obscene pictures, shot and bullets, obscene books, lead (except sheet lead), gunpowder, bad provisions (which from their peculiar state might endanger the public health), tissues of wool, cloths *de estrella*, swanskin.

The following deductions will be made from the articles upon which a duty is levied in order to meet certain expences :—

- The actual and final destination of the above article to be given.

Articles paying a duty according to the value . . . 5 per cent 2½ per cent

.. 11	..	0½	..
.. 16	..	0½	..
.. 24	..	0½	..
.. 32	..	1	..
.. 36	..	1½	..
..	specified	quicksilver		0½	..
..	"	other kind	}	2	..
..	"	exempt of duty	}		..

These deductions must be paid in specie, and immediately upon the merchandise being taken into consumption.

Foreign produce re-exported from the bonding warehouses will pay the following duties:—single bales, three rials; double, six rials; other kind in proportion; *silver* in chests and bars, four rials.

Native produce, under circumstances similar to the above, will pay, once for all, two rials.

The following duties will be levied instead of the specified duty:—Flour, in barrels or sacks, five rials per barrel or sack; wheat two rials per *fanega*. Those books which are allowed to be imported will pay six per cent of their value.

EXPORT DUTIES.

The produce of the soil and industries of the republic are exempt from all export duty, as also are the following articles:—Gold and silver thread and wire, spangles, lace, and other similar articles; copper.

The following articles, however, form exceptions to this general rule:—Gold and silver in any shape, cascarilla (Peruvian bark), saltpetre—paying on exportation abroad, cascarilla, two per cent of value; saltpetre, four per cent; coined silver, five per cent; coined gold, one per cent; gold paste or powder, two rials per ounce; silver manufactured, or old silver, four rials per mark; gold (manufactured), two rials per ounce.

When the foregoing articles are exported by national vessels, three-fourths of the above duties only will be levied.

TONNAGE AND PORT DUES.

All foreign vessels which discharge a part or the whole of their cargo in any port of the republic will be subjected to the following charges, payable at the port where they first discharge the whole or part of their freight:—Anchorage and port dues, five piastres per vessel; captain's, ship's complement, and health dues, five piastres per vessel; tonnage dues two rials per ton.

The amount of tonnage will be ascertained from the ship's papers or charters.

An export duty of two per cent is levied on bark, and of four per cent on nitrate of soda.

The importation of small shot, cuttings, and star cloths, are altogether prohibited.

In addition to the above duties on the import and export of goods, the following additional duties are by the 81st and 82nd Articles thereon imposed, in lieu of the payments formerly made for crane, mole, and other local charges, such as for watching, portage of goods to custom-house warehouses, and their stowage therein; namely, one-quarter per cent on goods chargeable with a duty of four per cent; one-half per cent ditto of eleven per cent; one-quarter per cent ditto of sixteen per cent; three-quarters per cent ditto of twenty-five per cent; one per cent ditto of thirty-two per cent; and one-half ditto of thirty-six per cent. Two per cent on goods chargeable with a specific duty, excepting quicksilver, on which the duty of one-quarter per cent is recoverable.

On the re-embarkation of all foreign goods, 3 rials = 1s. 6d. a package, or half a mule-load, say about 150 lbs. weight; 4 rials = 2s. on every box of silver.

The productions of the country are chargeable, for once only, with a duty of 2 rials

= 1s. (no measure or weight stated) upon their embarkation, disembarkation, or re-embarkation.

By Article 83 of the same law, "Every class of merchandise and produce which shall be conveyed directly from Europe, Asia, and North America, or by the Isthmus of Panama, to the principal ports of Peru, in foreign ships or consigned to foreigners, shall liquidate ten per cent of the total amount of the duties on their import payable to the state, in government documents of retired officers' pensions, documents of the foreign debt, or documents of the home debt, and the remainder in cash. If the said merchandise and produce shall be imported directly in foreign ships, and be consigned to Peruvian merchants, or in national vessels consigned to foreigners, they shall liquidate twenty per cent in the before-mentioned documents, and the remainder in cash; and if they shall be introduced in national ships consigned to citizens of the republic, they shall liquidate thirty per cent in government documents, and the remainder in cash. The foregoing are in violation of the treaty with England.

By Article 2, Commercial Code, the custom-house of Arica is allowed to make transshipments, solely, however, to the port of Cobija, levying 2 dollars = 8s. for duty on policies, and observing the legal formalities.

Foreign vessels may convey provisions, grass, and barley, to the minor port of Iquique, and to the Creek of Pisagua, when there are no national vessels to convey these articles.

The period of deposit in the port of Arica shall be extended to three years.

The natural or industrial productions of Bolivia may be deposited in private warehouses, with the consent of the custom-house, without requiring any warehouse rent.

The custom-house of Taena may permit the diminishing of the weight and the reduction of double packages for their more easy conveyance into the interior, requiring the memorial and other formalities, which, by the 71st Article, the collector of the customs ought to exact upon importations.

Importation.—The revisal of the ship's manifest by the consignee of the vessel shall take place within twenty-four hours after its delivery in the ports of Callao and Huachaco. In the port of Arica thirty-six hours, and in that of Paita, forty-eight hours are allowed for this revision.

Additions may be made to this manifest, but on no account any article abstracted, or its contents reduced.

When the alterations mentioned in the foregoing article shall have been effected, the consignee of the vessel shall present a second "general manifest," and also one in detail in the Spanish language, or on stamped paper.

His manifest must contain—the marks and numbers of the bales or packages; the description of article, quality, or quantity of the contents of the bale; the weight and quantity of articles not packed in bales.

The names of the "special consignees," who will answer for the genuineness of the articles intrusted to them (namely, that they are the *same articles* consigned to them by the merchant). The whole to be written in full, the margin free from writing, figures alone to be introduced, without either interpolations (notes excepted) or erasures.

Those articles, of which the consignee is unknown, shall be described in a supplementary document, and deposited forthwith in the custom-house.

One manifest to be sent to the inspector-general of public accounts, and the other will remain with the customs. No manifest will be considered, unless it conforms strictly with the above formalities.

The manifests being delivered, they will be compared, and if found correct, an order will be given (*papelito*) for the unloading to commence, without which order the merchandise will be liable to be seized.

An exception will be made for the landing of samples of small value.

Merchandise must not be unloaded before six in the morning, nor after two in the afternoon, from the 1st of May to the 1st of November; and not after three o'clock in the afternoon during the remainder of the year.

The entrance of the articles of the ship's cargo shall be admitted as follows, into the magazines and warehouses of the custom-house:—

Almonds, in sacks; wood in (timber); brandy, botijas; wines, in botijas; cacao; cocoa; candle-wicks (Pavilo); copper; iron; grain (wheat) and flour; nuts; origan; hides and skins, leather for saddles; paving-stones; rice; soap, native; salt and stones; tallow; sugar; tobacco, native; merchandises and drugs of every other kind, foreign or native, which do not pay duty. Articles relative to the complement of a vessel. Every kind of provision, except those enumerated above.

In order to introduce an article for consumption, three copies of a "Poliza," or import bill, must be made, containing the name of the importing vessel; the date of the "manifest in detail;" the marks and numbers of the bales, their contents, weight, or measure, quantity and quality, exact or approximate. A duty of four reals is levied upon this "bill."

Exports.—The discharge of the ship's cargo being completed, the captain shall certify the same on stamped paper, in which he must give a list of the articles, if any, still remaining on board. An inspection of the hold will then be made by the proper officer.

A *clearance* permit will be given by the customs, free of expense, and which must be written on the following description of paper: for foreign vessels, paper of three piastres; national ditto, ditto stamped.

Re-exportation.—The re-exporter from the bonding warehouse must present three "demands," on ordinary paper, for which he will pay—to re-export abroad, one piastre; to a national port, four reals.

In transporting the cargo of one ship to another in the Port of Callao, two "demands" must be sent in, which will cost, if the cargo is destined to go to a foreign port, two piastres, ditto to a national port, ditto.

The following articles are considered as being included under the head of ships' provisions and ships' necessaries, and pay no duties except *bonding* fees, &c.: bise uit, salt fish, tobacco for chewing, salt meat, anchors, oars, wood, handspikes, levers, &c., pitch and tar, iron chain cables, nails (clavos) of every kind, cordage (jarcia) ditto, travellers (a kind of block), hooks and grapnels, cooking utensils, sheet copper, tow, fish oil, linseed oil, tale lanterns, soot, paint, pumps, blocks, grindstones, sand-glasses (half minutes), sounding lead and line, tissues for sails and flags, zinc plates.

When captains of men-of-war desire to send the wages of their crew to Callao, they must procure the note-of-hand of the governor of the station. If the amount is in hard dollars, or in ounces of gold, an export duty will be levied upon the money.

Coasting Trade.—The coasting trade can only be carried on by national vessels,* with the exception of a few articles, and the produce of the country, or such merchandises as are free of duty,—to the Port of Callao, *viâ* the ports of Arica and Islay, when there are not any national vessels loading at these two latter ports.

The following are considered secondary ports—Iquique, Ilo, Pisco, Huacho, Santa, Pacasmayo, San José de Lambayeque.

The following are *qualified* roadsteads only for exporting the produce of the country—Sima, Cuzco, Majillones, Nasca, Chincha, Cerro-Azul, Chaucay, Supe, Pisagua, Quile, Huancayo, Casara, Samauco, Sechura, Tumbes.

Bond Warehousing.—Callao is the only port in the republic where merchandise can be bonded for an unlimited term, without the payment of the duty on them. For the first *three months* no bonding dues will be levied.

For every month exceeding three, only one rial per *pieza*. By this is meant the *half* of a *load*, valued according to its bulk or weight, at six *arrobas*. If a month is commenced, that month will be charged in full.

Internal Trade.—The interior trade of Peru is exclusively reserved to the natives and citizens who are inscribed in the matriculation-book.

Merchandise houses for importation into the interior (*casas introductoras*) can only be established at the following places:—Arica and Tacna, Islay and Arequipa, Callao and Lima, Huancayo and Trujillo, Paita and Piura. These houses must sell their goods by wholesale, and not in separate parcels, under pain of forfeiting a penalty of 500

* In the *first-rate* and *secondary* ports, and the *qualified* roadsteads.

piastres, to be the reward of the informer; such penalty to be levied by either the tribunal of the *consulado* or the *commercial judge* of the place.

All products of the soil of the republic are allowed free circulation with the exception of the following:—gold and silver, in paste, in bars, and in powder. These must be accompanied by an "*acquit-à-caution*;" brandy, wines, tobacco. Other articles taxed with a duty.

The customs duty must be paid at the first place of importation.

Transit by Land.—Arica is the only place of transit for the imports and exports of the Republic of Bolivia.

The bonding warehouses at Arica will receive goods re-exported from those at Callao by national and foreign vessels, for the trade of the interior. The produce and manufactures of Bolivia will also be received in the warehouses, to remain in bond for exportation.

CHAPTER X.

BOLIVIAN TARIFF DUTIES AND TRADE.

1. The ultramarine effects which may come into the republic of Bolivia by the land frontiers from the 1st of January, 1845, shall pay duties in the following proportion.

2. Ultramarine liquors and foreign cacao, thirty-six per cent.

3. Perfumery, clocks for tables, or watches, cards, cigars, women's shoes, caps of every kind, desks, iron or brass bedsteads, chairs, sofas, toilette glasses, lanterns and lustres, candlesticks, every description of mercery, foreign gold lace, tecuyos (grey shirting), and every other article to which this law assigns no direct duty, twenty-eight per cent.

4. All woollen goods, silk ditto, linen embroidered, lamas, lamillas (cloth of gold); tissue, eighteen per cent.

5. Earthenware, glass, crystal, and writing paper, eight per cent.

6. Gold and silver ornaments, precious stones, and ironware.

7. *Articles free from all Duties.*—Cattle, come-stibles of the first necessity brought into the republic. Also are free from all duties, on their introduction into the republic, raw cotton, raw wool, cotton-thread, and woollen ditto, vulgarly called *cunto*, excepting rice, which is to pay forty per cent.

8. All importation of foreign merchandise which may enter the republic, shall pay, besides the duties prefixed by this law, a medio per cent for the funds of the Chamber of Commerce in the capital in which they are consumed.

9. Books introduced into the republic by its land frontiers shall pay six per cent, applicable to the funds of the library of the capital where the expenditure takes place.

10. The government is authorised to lower the duties which in the republic weigh on the products of the industry of the neighbouring states, as soon as it obtains from them securities that in these states will be observed the corresponding reciprocity as regards the products of Bolivian industry introduced into their territory. It is authorised to fix the duties on coined silver and gold, or on bullion on their extraction from the republic, as well by the land frontiers as by the port of Cobija.

11. From the 1st of January, 1845, the introduction of gunpowder is prohibited into the republic, either by its land frontiers or by the port of Cobija. Matches (*fósforos*) are also prohibited.

Dated, Illustrious and heroic city of Sucre, 2nd of November, 1844.

JOSE BALLIVIAN; the Minister of Finance, MIGUEL MARIA AGUIRRE.

In 1846, two Englishmen at Corocoro, a place long famous for copper ores, are said

to have discovered a silver mine of immense dimensions in the province of Inquisivi, department of La Paz.

VALUE of Goods and Duties collected in the Custom Houses of La Paz, Oruro, and Cochabamba on Ultramarine Merchandise imported into Bolivia, by her Land Frontiers, in the Year 1840; and of the Value of Coined Money exported to Peru; and of the Duties paid thereon by the Exporters from this to the Peruvian Republic.

Ministry of Finance, Sucre, Feb. 15. 1841.

COBIZA is the only legal seaport in Bolivia. There are ship-building yards established in it, and the vessels built have privileges conferred upon them. The duties levied at the custom-house of Cobiza on foreign merchandise imported during the year 1840, amounted to 103,951 dollars two and a-half rials, equal to about 20,790*l.* sterling.

A quay, barracks, and a new custom-house are the public works in progress, and a spring of fine water (a necessary of which Cobiza was formerly deficient) has lately been discovered by an English engineer.

Number of foreign vessels which entered the port of Cobiza during the year 1840:—English, thirty-three; French, fifteen; Spanish, three; North American, four; Sardinian, four; Mexican, one; Granadian, one; Ecuadorian, two; Chilian, twenty; Peruvian, fifteen; total, ninety-two.

Population in 1843—Males, 322; females, 283; male children, 105; female ditto eighty-three; total, 793 inhabitants. Births in the year—Males, twenty; females,

twenty-six; total, forty-six. Deaths—Old persons, three; adults, twenty-one; children, thirty-six; total, sixty. Marriages, five.

The garrison, and men employed as labourers in the different mining establishments on the coast are not included in the above statement.

Ships which have anchored in the port during the year 1843, not including the steam vessels, ships of war, and sailing packets:—English, twenty-one; French, twelve; North American, seven; Chilean, twenty-four; Spanish, three; Belgian, one; Sardinian, four; Peruvian, seven; Hamburgers, eight; Danish, four; total, ninety-one.

AMOUNT of the Exportation of Money through Cobija in the Year 1843.

Two *primary* schools exist in Cobija, one paid by the state, the other a private establishment. The town possesses besides an hospital, a druggist's shop, seven mercantile warehouses, eleven shops—to sell in retail—well supplied with foreign goods; seventy-eight chandlers' shops (*pulperias*), seven bakers, five tailors, two shoemakers, three principal eating and lodging-houses, two inferior eating and lodging-houses, two billiard-rooms, four large mining establishments with 120 labourers, and three smaller ones with thirty labourers.—Cobija, January 1st, 1844.

CHAPTER XI.

STATISTICS OF CHILE.

THE administration of the affairs of Chile, has been far more regularly and justly executed than that of any other Spanish American republic. The condition of this state has, consequently, been more prosperous.

We have little data as to the trade of Chile under Spain, as a great part of its commerce passed through Peru and part through La Plata. Some time after the independence of Chile, the foreign trade opened round Cape Horn with Europe, and it was increased to other parts. In 1824 the value of imports were estimated at 11,500,000 dollars, and the exports of gold and silver at 80,000 dollars, and of agricultural products of 4,000,000 dollars. This we consider but a vague estimate.

Revenue and Expenditure.—Chile has maintained her public credit amid war and difficulty. In 1833, when the country required some assistance from turmoil, the public debt had accumulated to the enormous amount, for a small population, of about 10,000,000 dollars. In consequence of this burden, the Pre-

sident disbanded one-third of the standing army, and greatly reduced the civil expenditure.

In 1835, an equilibrium in the finances of the state was obtained, and more than 1,500,000 piastres of interior debts were paid off.

INCREASE of Revenue.

	piastres.		piastres.
1831	1,517,537	1834	1,922,966
1832	1,652,713	1835	2,003,421
1833	1,770,760		

The annual mining produce under the Spaniards was, on the average :

Silver.....	23,500 mares (1 marc=8 oz.)	Copper.....	25,000 cwt.
-------------	-----------------------------	-------------	-------------

In 1834, it had risen to—

Silver	164,000 mares.	Copper.....	75,000 cwt.
--------------	----------------	-------------	-------------

which brought into circulation a sum of about 2,500,000 piastres.

In 1837, Chile was, owing to the intrigues of Santa Cruz's agents, declared to be *in statu belli*.

ore.....do.	213,241	2 4	..	10 0	359,803	111,961	0 0
Estimated returns in bills for supplies to foreign shipping, viz., men-of-war and merchant vessels, (United States, British, and French), and salaries of diplomatic and consular agents.....	800,000	160,000	0 0
Other Chilean articles of export, as wheat, flour, hides, cow-bones, wool, hemp, building timber, Chile hams, nuts, and tallow (from Meudosa, Argentine Republic).....	1,300,000	260,000	0 0
Total.....	5,020,708	1,139,212	12 0

N. 12.—The amount of the export of gold, silver, and copper is the average of the amount of these articles exported from 1836 to 1839, both inclusive, as shown by the returns presented to Congress by the Chilean Minister of Finance, but in this amount is not included money or bullion passing in transit through the port of Valparaiso as returns for foreign goods sold in that port for Bolivia, Peru, Ecuador, and the western coasts of New Granada, Central America, and Mexico; and for China and other countries.

THE TRADE OF VALPARAISO DURING THE YEAR 1840.

During the continuation of the war between Chile and Peru, from the end of 1836 to the middle of 1839, the exports from Europe were cautiously limited.

On the re-establishment of peace the small proportion of foreign supplies remaining in the warehouses of Valparaiso found a ready and profitable sale. But the intelligence of peace having reached Europe, supplies from England, France, Germany, and North America poured in during the latter end of 1839 and the whole of 1840, to an unprecedented extent, and infinitely disproportioned to the consumption of the inhabitants.

Thus the general tonnage of foreign shipping entered inwards during the following years amounted to, in 1837, 25,935 tons; of which, from Great Britain direct, 4533 tons; 1838, 24,198, from Great Britain, 4098 tons; 1839, 27,520, and from Great Britain direct 7507; in 1840, 45,512 tons, from Great Britain 11,010 tons.

During the former years, and until the middle of 1839, Valparaiso was the port to which the merchants and dealers established in those parts along the coast of the Pacific, from Cape Horn to the most northern part of Mexico (who, having rarely any direct communication with Europe), came to purchase the larger portion of their supplies. The blockade of the entire coast of Mexico having cut off all commercial communication on that side, had considerably increased the demand from hence, and the exportation from this country of European commodities would have been still more extensive had the event been foreseen, and articles, in a sufficient quantity, suited to the demand of that market, been provided.

The Bolivian market is the only one with which the transit trade has increased.

The value of European goods existing in Valparaiso at the end of 1840, was calculated at 14,000,000 dollars.

The trade between this state and her majesty's Australian dominions has rapidly increased during the year 1840, as compared with that of 1839, but as the exportation, composed of raw produce, must depend materially on the favourable or unfavourable nature of the harvest in those territories, a sound inference can scarcely be drawn.

The departures, in the two above-mentioned years, have been—

	From Talcahuano.	From Valparaiso.
1839	281 tons	724 tons.
1840	1687 „	4701 „

with cargoes, principally of corn and flour, and an occasional vessel loaded with mares and other beasts of burden.

The imports are trifling, consisting of sheep and articles of small account, though numerous vessels seek these ports in search of freight for Europe or elsewhere.

The commercial importance of Valparaiso, the principal seaport of Chile, shows a state of prosperity and confidence in the stability of the government.

While in 1834 only 450 vessels aggregating 77,700 tons entered this port, the proportions in 1842, were as follows:—

Men-of-war	44	} 187,453 tons.
Steamboats	24	
Commercial vessels	617	

During the year 1842, the commercial movements in all Chilean ports—Valparaiso, Coquimbo, Copiapo, Constitucion, Talcahuano, Valdivia, and Chiloe—together were:—

<i>Entries</i> .	Men-of-war	48	} 339,019 tons.
	Trading vessels	1173	
	Steamers	112	
<i>Departures</i> {	Men-of-war	54	} 328,288 tons.
	Steamers	111	
	Trading vessels	1209	

The customs' revenue of which amounted to 1,936,323 piastres.

Transit Trade.—At the custom-house of Valparaiso, there were, on May 31, 1842, 722,472 bales of merchandise.

The value of which was 7,159,036 piastres.

And coined metals to the amount of . 3,260,833 „

The navigation of the Port of Valparaiso with foreigners, in 1842, compared to 1841, underwent a diminution of twenty-six vessels, measuring 1659 tons.

The French movement has not suffered: there was in the navigation between Valparaiso and France, an augmentation of eight vessels, and of 2585 tons. The intercourse, according to the preceding table, was effected exclusively under the French flag. The table of the French customs makes it (inward and outward bound, together) thirty vessels measuring 7253 tons. Of this number, one single vessel only belonged to a foreign flag.

Trade.—There is no official account published of the Chilian trade with the foreign

states. The continuation of hostilities between Peru and Bolivia, the suspension of relations with Guayaquil, the population of which has lately been diminished by the yellow fever, have, in 1842, caused a great decrease in the trade of the Port of Valparaiso.

Although the French vessels brought to Chile in 1842, took but inconsiderable cargoes, their sale was effected with unsatisfactory results, though without loss.

The most favourable period of the year for arrivals is the first fortnight of September. On the 18th of the month the principal national *fiesta* of the country takes place, and the public rejoicings attract many strangers to Valparaiso, who profit by this circumstance to make their purchases.

Lyons silks remain without competition in the market of Valparaiso, for their fine qualities and the finish of the designs. The *shaunls* of levantine and serges were also in demand, but subject to the caprice of fashion. The French made embroidered *shaunls*, China crapes, scarcely compete with those of China, where labour is so poorly required.

French *wines* had, for some time, sold well, but too many imports, for the wants of the place, caused a fall, in 1842, of one half in price, from twenty-four to ten piastres.

The Average Charges for Freight during the Quarter have been:

COUNTRIES.	Per Ton.	Primage.	COUNTRIES.	Per Ton.	Primage.
	£ s. d.	per cent.		£ s. d.	per cent.
England, (Copper ore to Santos),	5 12 6	5 per cent.	Valparaiso, 12 dollars at 184	2 5 0	nil.

CHILIAN TRADE WITH FRANCE DURING THE FIRST SIX MONTHS OF THE YEAR 1843.

Navigation.—The number of vessels under the French flag, which arrived at Valparaiso during the first half year of 1843 increased in a remarkable manner, compared to the same period of 1842.

The arrivals amounted to twenty-six vessels of 7248 tons; and the departures to twenty-five vessels of 6401 tons. Ten vessels came direct from France, and seven were fitted out for this destination.

Trade.—The French products bought at Valparaiso sold off well; but not merchandises destined for Bolivia and Peru, countries where political dissensions continue to be very prejudicial to commercial operations.

The French manufactures begin to reap, in Chile, the fruit of the efforts which they have for some time made, to augment their transactions and struggle against foreign competition. Several French articles of silk have latterly obtained at Valparaiso a marked preference over similar Chinese products.

A fact to be remarked is, that France has succeeded to excel, in Chile, in its own silks, the *satins*, *serges*, *listonnerie*, *gris de napolis*, and the *sewing silk* of China. Thus,

black *satins* of China, thirty-three inches broad, remain without buyers at the price of eleven rials, whereas black *satins* of France place themselves easily at twenty rials. The *serges* of China, offered at eight rials, and that of France at eleven rials; *gras de napes* of China, called *glazed*, of twenty-six inches in breadth, sells with difficulty at five rials; and that of France, of twenty-two inches, fetch from nine to eleven rials. The *listons* of China are completely neglected. In a word, French *silks* in general, have obtained a favour which was justified by the good quality of the stuffs exported. These facts will fix, no doubt, the attention of the French export trade.

China, besides, imported formerly by wholesale into Chile, *shawls* of *serantine sergées*, embroidered; the imitations which the French make of these tissues, are dispersed over the market, where they exclude those of China. A recent exportation of this French article has had equal success at Lima.

France has until now exceeded, in Chile, in the sale of shawls: by the elegance of their designs, the splendour of the colours, and particularly by the shades, *lilac*, *violet*, *lavender*, which the Chinese never could import, as they arrived nearly always *worm-eaten*, or damaged. But China still distinguishes itself by the quality of the principal material which it uses, by the strength of its shawls, the fringes of which are fuller than those of France.

Shawls, embroidered in the loom by machine, which the French designate *Chinese shawls* of two colours, cost in China, in the beginning of 1843, six piastres; similar French articles could not then be established for less than from forty francs to forty-two francs; and although the progress of the French manufactures have enabled them to be produced at a lesser price, the advantage is still on the side of China.

Ribbons are furnished almost exclusively by Switzerland and Germany.

IMPORTS into France from Chile in 1842.

CHILIAN MINES.

By an old Spanish law still in force in Chile, every encouragement is given to search for mines. The discoverer may work a mine in any ground, by paying five shillings; and before paying this he may try, even in the garden of another man, for twenty days. In the copper-mines, the men have little time allowed for their meals; and during both summer and winter they begin when it is light, and leave off at dark. (In Chile the summer days are shorter, and the winter days longer, than in England.) They are (at the mines of Jajuel) paid about one pound sterling a month, together with food. This food consists of sixteen figs, and two small loaves of bread for breakfast, boiled beans for dinner, and broken roasted wheat grain for supper. They scarcely ever taste meat. They have to clothe themselves and to support their families with this pound per month.

On arrival at the gold-mines of Yaquil (Jajuel), Mr. Darwin was surprised at the pale appearance of the men. The mine is 450 feet deep, and each man brings up nearly two hundred weight of ore. With this load they have to climb up the alternate notches cut in the trunks of trees placed in a zig-zag line up the shaft. The men (who are quite naked, except drawers) ascend with this heavy load from the bottom. Even young men, eighteen or twenty years of age, do this, although their muscular development of body is far from completed.

Mr. Darwin says, that the *apires* live entirely on boiled beans and bread: they would prefer the bread alone, but the masters, finding that they cannot work so hard upon this, insist on their eating the beans also. Their pay is from twenty-four to twenty-eight shillings a month; they leave the mine only once in three weeks, when

they stay with their families for two days. As a means of preventing the men from abstracting any of the gold, or gold ore, the owners establish a very summary and stringent tribunal. Whenever the superintendent finds a lump of ore secreted for theft, its full value is stopped out of the wages of all the men, so that they watch over each other, each having a direct interest in the honesty of all the rest.

The amount of labour they undergo is greater than that of slaves; being to a certain extent masters of their own actions, they bear up against what would wear down most men. Living for weeks together in the most desolate spots, when they descend to the villages on feast-days there is no excess or extravagance into which they do not run. They occasionally gain a considerable sum, and then, like sailors with prize-money, they soon squander it. They drink excessively, buy quantities of clothes, and in a few days return to the mines without a penny. It is observed by Mr. Darwin, that this thoughtlessness, as with sailors, is the result of the mode in which they are made dependent upon others rather than on themselves. Their daily food is found them, and they acquire no habitual care as to the means of subsistence; while the temptation to enjoyment and the means of paying for it occur at the same times. How different is this from the system in Cornwall, where the men think for themselves, and form an intelligent body.

The miners here spoken of are a different set of men from the *apires*, who are those that bring up the heavy burdens. The miners dig the ore from the bowels of the mine while the *apires* are simply labourers, much like the bricklayers' labourers, but who carry less heavy loads, and up a much less height. Mr. Darwin illustrates the extraordinary labour which the *apires* undergo:—"According to the general regulation, the *apire* is not allowed to halt for breath, except the mine is six hundred feet deep. The average load is considered as rather more than 200 pounds, and I have been assured that one of 300 pounds (twenty-two stones and a half), by way of a trial, has been brought up from the deepest mine! At the time the *apires* were bringing up the usual load twelve times in the day, that is, 2400 pounds from eighty yards deep; and they were employed in the intervals in breaking and picking ore. These men, excepting from accidents, are healthy and appear cheerful—their bodies are not very muscular. They rarely eat meat once a week, and never oftener, and then only the hard dry charqui (dried beef). Although with a knowledge that the labour is voluntary, it was, nevertheless, quite revolting to see the state in which they reached the mouth of the mine; their bodies bent forward, leaning with their arms on the steps, their legs bowed, the muscles quivering, the perspiration streaming from their faces over their breasts, their nostrils distended, the corners of their mouth forcibly drawn back, and the expulsion of their breath the most laborious, each time, from habit, they utter an articulate cry of 'ay-ay,' which ends in a sound rising from deep in the chest, but shrill like the note of a lute. After staggering to the pile of ores, they emptied the 'carpacho,' in two or three seconds recovering their breath, they wiped the sweat from their brows, and, apparently quite fresh, descended the mine again at a quick pace. This appears to me a wonderful instance of the amount of labour which habit (for it can be nothing else) will enable a man to endure."

At a copper-mine Mr. Darwin was told that the Chilian miners had no conception of the value of copper pyrites (a rich ore of copper) until informed of the circumstance by miners from this country: the Chilians laughed at the English for entertaining such a notion; but the English afterwards turned the laugh against them, by making a profitable use of some veins of this ore, which they had bought for a mere trifle.

The mining system of Chile is generally conducted as follows:—There are two principal persons concerned in almost every mine, the *proprietor* and the *habilitador*: the first, or the actual miner, lives at his hacienda or farm, and attends to the details of working the ore. The *habilitador* resides at one or other of the sea-port towns; he is the mining capitalist, by whose means the miner is enabled to proceed with his work. The *habilitadores* are generally diligent and prudent men; the proprietor or miner is too often improvident. The proprietor farms his own ground, obtaining from his farm vegetables and sometimes live stock for the subsistence of his miners. The melting-house is also generally built on his hacienda, and the ore is brought to his door on the backs of mules. These farmer-miners rarely work a mine with their own unassisted capital; they are seldom wealthy, and when they are so, it is found more advantageous to share with

the habilitador, who takes charge of the business part of the concern. The miner is frequently without funds, and is at the mercy of the habilitador, who makes what terms he pleases.

The Chilian system has, however, undergone some change by the introduction of foreign capital.

There are at Coquimbo some considerable French trade-houses. Mr. Lambert, who was educated at the Polytechnic school, in France, has constructed reverberatory furnaces, said to be the best in Chile.

Coquimbo is the centre of the copper-mine trade, and Copiapo of the silver-mines. It has been calculated that this latter port sent to Europe, by way of Valparaiso, from 1831 to 1841, twelve millions of piastres worth of silver, in bars, about 2,650,000*l.* sterling.

A great number of foreign vessels, who visit the coasts of the Pacific Ocean, go to Coquimbo, Huasco, and Copiapo, to bring away copper ore, chiefly for England and the United States.

The mines of the province of Coquimbo are in the Cordilleras, and in the hills toward the sea, and in the chain of mountains of the interior. The richness of the ore have caused these mines to be chiefly those explored.

By a law of the Chilian congress which came into operation in 1841, the *exportation of flour and corn is free of duty.*

By a law, dated March 8, 1841, *foreign wines and spirits* pay a *transit duty* at the

Rate of, per case or cask, of twelve bottles $\frac{1}{2}$ rials per month.

„	per cask, under 9 gallons	$\frac{1}{2}$	„	„
„	„ from 10 to 20 gallons	1	„	„
„	„ „ 21 to 30 „	$1\frac{1}{2}$	„	„
„	„ „ 31 to 60 „	$2\frac{1}{2}$	„	„
„	„ „ 61 to 80 „	3	„	„
„	„ „ 81 to 100 „	4	„	„
„	„ „ 101 to 120 „	5	„	„
„	„ „ 120 and upwards	6	„	„

Hides with the hair on, skins of Guanaco, Vicuna, or Alpaca; wool in the fleece, washed or unwashed; suet or fat; tallow; common salt in stones or bags, with the exception of salt in small boxes; silver bullion; silver, wrought or unwrought; trinkets, of gold, of silver, or precious stones, imported in transit, upon re-exportation by sea, are charged with a *transit duty* of two per cent, with the exception of metals in bullion, in a wrought or unwrought shape; and of trinkets of gold, of silver, or of precious stones, which are only charged, on re-exportation, with an *ad valorem transit duty* of one-quarter per cent. None of these articles, however, if cleared from home consumption, pay any transit duty at all, but simply the import duty. And, in either case, whether cleared for home consumption or for re-exportation, for each bill of entry the customs claim *two dollars* currency.

By a law dated December 30, 1840, *copper minerals*, calcined or in “*ejes*,” when exported to foreign ports are charged with a municipal duty of one and a half per cent.

CHAPTER XIII.

CUSTOMS REGULATIONS AND TARIFF OF CHILE.

A DECREE establishing a statistical board was passed in 1843. Copiapo declared a major port. Importation of foreign coal permitted through the ports of Papuda, Tongoi, Totoralillo, Chanarol, Pena Blanca, and La Herradara; but only from major ports. Bills of health must be brought by vessels signed by Chilian consuls.

TARIFF OF THE OFFICIAL VALUATIONS OF NATIONAL AND FOREIGN MERCHANDISE.

The Chilean Custom Duties are generally levied on the Valuation. Duties on the Value are levied according to a specified Tariff of Prices as follows:

IMPORT DUTIES.			IMPORT DUTIES.

CHAPTER XIV.

STATISTICS OF BUENOS AYRES.

THE civil war under Rosas has annihilated the means of compiling any late return upon which reliance can be placed, regarding the trade and statistics of Buenos Ayres.

Under Spain the trade of Buenos Ayres consisted in exporting the precious metals, and salt beef, tallow, fine furs, sea wolf-skins, wool, sheep-skins, flour, oil, copper, hides, &c. To the interior provinces of Peru, were exported Paraguay tea, swan skins, negro slaves, thread, &c., in exchange for sugar, cacao, cinnamon, rice, indigo, cotton, oil, pimento, wax, baize, woollen goods, quicksilver, &c.

From Europe, La Plata received linens, woollens, silks, cottons, hats, iron, &c., and the imports were estimated, in average years, at 758,400*l.* per annum, whilst the exports amounted, in agricultural produce, to the value of 434,000*l.*, and in gold and silver to 1,183,400*l.* The whole estimated total value of exports amounted to 1,617,400*l.* sterling. The vicerealty formerly remitted 700,000 piastres, at 4*s.* 4*d.* each, to the royal coffers of Spain.

In 1828, sixty-four British ships of 12,746 tons entered the port of Buenos Ayres.

REMARKS.—The average exchange of the year at which the Returns of Trade are calculated, is 70¢ per current dollar of Buenos Ayres. Although the British vessels which have arrived in this port during the year, have decreased in number and tonnage, yet the value of the goods imported in them has not much diminished, say about 10,000 sterling.

The produce of this country, exported in the course of the year, has augmented in value, about 11,000 sterling more than last year, of which increase the British merchants have partaken in fair proportion, and have sent out large returns for our manufactured goods.

The quantity and quality of the wool now furnished from this province, is gradually on the advance, and will prove highly advantageous in our commercial relations with England. The foreign trade with Buenos Ayres continues much the same with respect to imports, but the exports of produce have been much increased.

TRADE OF BUENOS AYRES DURING THE YEARS 1842 AND 1843.

General Trade. The total value of the exports from Buenos Ayres during the year 1843 was valued at 41,423,000 francs (1,659,206*l.* sterling) being an increase of 5,702,000 francs (228,080*l.*) over the exports of the preceding year.

French Trade.—The increase bore upon all articles, and the exports from Buenos Ayres to France have gradually ascended in the scale of importance.

Failure of Commercial Firms.—These favourable results were unfortunately broken off in the early part of the year 1844, by the failure of five of the principal commercial houses at Buenos Ayres; namely, four Argentine and one Brazilian: these failures were followed by the bankruptcy of several other smaller firms.

Amount of Liabilities.—The amount of their liabilities, according to official documents, was 24,000,000 of piastres, paper money, or 307,200*l.* sterling, and as the failures came one upon the other, the panic was very great in a market where the amount of paper money (the only legal currency) in circulation is 50,000,000 piastres, or 665,680*l.*

Causes of Failure.—The causes of these failures may be attributed to the great rage for speculation which seized the merchants during the war with Uruguay, and the blockade of Monte Video. They imagined that this latter port would not be able to export their principal article of trade, namely, skins or hides, they therefore purchased all the hides they could procure; and for this purpose they borrowed capital at the rate of two and two-and-a-half per cent per month, or if by the year, at interest of forty per cent! During this mania news was brought that large cargoes of hides had been shipped by European vessels for the European market, from the Rio Grande, to which the cattle had been driven and killed for provisions, and the skins were sold at a very low price, by Rivera and his men: the consequence of which was a loss, in the European markets, of twenty-five per cent on salted Buenos Ayrean hides, and of six per cent on dried hides. Although the several European houses established at Buenos Ayres were not entirely ruined by this loss, they all suffered more or less. The English firms, speculating in every branch of trade, had the most to bear, but the losses fell more directly upon those in Great Britain: at Buenos Ayres, they being only for the most part the consignees of English manufactures, they only lost the commission on the goods consigned to them.

British Trade.—The British trade being principally with the inhabitants of the town and country of Buenos Ayres, lost not only by this panic but also on the appearance of the Argentine army in Uruguay, which deprived it of its most safe outlet to market.

Trade with the Provinces.—European merchants do not attempt this trade on their own account, in consequence of the risks which it is exposed to.

Mode of Trading.—The products of Europe have to pass through several intermediate provinces before they arrive in those states of the confederation where they are purchased wholesale by native houses, and who confine themselves solely to this branch of business. They then sell them to other and less considerable dealers at a profit, and these again transmit them into the interior. For more than a year the blockade of the Parana has prevented the transit of goods to the richest provinces of Santa Fé, Cordova, and Corrientes, which are estimated, as engrossing two-thirds of the total trade of the interior. The only route open is by the provinces, which transport their produce to Buenos Ayres by land, namely, San Luis, Mendoza la Rioja. These take in return European manufactures, but their consumption being only a third part of the total trade, does not make up for the loss occasioned by the interdicting the navigation of the Upper Parana and of Uruguay.

French Trade.—This trade has suffered less than the English, on account of its being more particularly confined to the town of Buenos Ayres. French merchandise is rarely sent into the interior. Although French goods sell at a good profit; they are sent

interior by others, not by French merchants; who, being prudent, even stopped their speculations in hides in time to save themselves from loss.

Wine Trade.—The French wine trade suffered in the commencement of the year from the blockade of the rivers, but Spain having recently exported wines only in small quantities to the River Plate, wines from France found no competition in the market, and three different cargoes from Cette, Marseilles, and Bordeaux, sold at good profit.

EXPORTS from Buenos Ayres during 1843.

State of Trade in May, 1844.—Goods of Parisian Manufacture in the Market of Buenos Ayres.—This branch of the French trade (*objets de l'industrie Parisienne*), is of some importance. In 1836, an average year, the articles of Parisian industry imported, were valued at 421,206 francs, or nineteen per cent of the total French imports, composed as follows: mercery or small wares, fans in pretty large parcels, white and straw-coloured kid gloves; those of too dark a colour, soil and fade at sea; bone, ivory, and tortoise-shell combs, brushes of every kind, metal buttons, with bone, ivory, and composition; walking-canes, and small looking-glasses; since 1836, the latter have been in much demand.

Articles of the Toilette for Men.—Since these have latterly been manufactured at Buenos Ayres, those of France are only imported with little profit; but articles of the toilette for women, such as lace, embroideries, dresses, caps, and bonnets, find a good market.

Stationery and Paper-hangings.—Under this head are included fancy gilt, enamelled, &c., paper, also pocket-books and pencil-cases; these articles are only used by the more opulent inhabitants, but not extensively, on account of the political state of the country. Stationery is mostly supplied by England, at least the superior qualities, the thinner and less expensive being French.

Perfumery.—The importations are considerable; but the profits small.

Hats and Bonnets, &c.—Few persons wear, at Buenos Ayres, felt hats; and Germany supplies silk hats. The latter are very cheap, and notwithstanding the duty of about three shillings per hat, the Germans find the trade profitable. French hats have not been able to compete with these.

Wrought Leather and Skins.—Those of Parisian industry rival competition; the consumption of boots and shoes for the army and for private use being very great. The profits are very limited, from the import duties being so very high, and the consumption being almost entirely confined to the town of Buenos Ayres; the arrival of two or three cargoes is sufficient to glut the market, and ruinously to lower the prices.

The interest for money lent at Buenos Ayres is one-half per cent per month; it has been at two, two and a half, and even three per cent per month.

French Wines.—The similarity of the French southern wines to those of Spain (which country formerly alone supplied Buenos Ayres), and their cheapness, will soon put down all competition. The imports have considerably increased, in 1843, particularly from the port of Cette. The French exports of wine during 1842 to Buenos Ayres and Monte Video amounted to 73,179 hectolitres; in 1839, the exports were only 41,419 hectolitres.

Trades, &c., in Buenos Ayres.—In the year 1843 there were in the town of Buenos Ayres, six armourers, twenty-nine inns and hotels, five breweries, fifteen jewellers, forty-five bakers, 459 eating-houses, including public-houses, six tanneries, thirteen chandlers, eighty-six boot and shoemakers, two auctioneers, four manufactories of chocolate, twelve manufactories of cigars, 905 vehicles (carts, waggons, &c.), thirty-nine consignee offices, two drug magazines, nine (livery-stable keepers) horse-dealers, 202 fruiterers and green-grocers, sixty-nine brick-kilns (*fours à briques*), twelve outfitters, nine watch and clock makers, four tennis-courts, fifty-five billiard and coffee-rooms, five job-carriage proprietors, four libraries, sixty-six wholesale warehouses (European articles), 222 retail warehouses (ditto), forty-three magazines for the products of the country (hides, wools, tallow, horns), 273 magazines for divers kinds of stuffs, ten mattress-makers, eleven mercery warehouses and manufactories, sixty-three corn-mills moved by horse and other power, eleven fashionable magazines, twenty-four typographical presses, thirty-two confectioners, twenty-six chemists and druggists, thirteen hardware houses, ten dyers, four carpet-manufactories, three manufactories of tobacco (cut), six manufactories of vermicelli 312 different kinds of industrial workshops kept by labourers or workmen.

French woollen cloth.—During the year 1841, after the raising of the blockade, there was imported from France, cloths of all kinds to the amount of 300,000 fr. (12,000*l.*) manufacturing price, a sum which exceeded a little, that of 1842. For the year 1843 the sales are not inferior to those of the previous year, notwithstanding the disadvantages resulting from the prolongation of the war between this country and Monte Video.

There has been sent from France, four qualities of cloth, the prices of which (in France) have varied from seven to twelve francs, from eleven to thirteen, from thirteen to eighteen, and from eighteen to twenty-four francs per metre. The sales were in the following proportions; common cloths, from seven to twelve francs could not meet English competition. Those of greater durability than similar English cloths have neither the lightness (which at La Plata is a quality), nor the lustre of the latter, nor are they so cheap.

The other qualities have sold in the following proportions: one-third of the value at from twelve to thirteen francs per metre, one-sixth, at from thirteen to eighteen francs, three-sixths at from eighteen to twenty-four francs. The qualities quoted at from seven to nine and ten francs have only sold in very small parcels, and generally at a loss.

French Modes.—The only colours that find a sale are, the dark and light blues called English blue, black, and bronze-black; these are the only ones which ought to be imported; the greens, the bronze-greens, and all that approaches to green is proscribed as being the colour adopted by one of the two parties at the time of the first civil war.

As to the quality, the buyers have generally preferred light cloths to those, which, though stronger and more solid, have not that silken and brilliant dressing so much sought after by the Argentines; it is principally to the richer class of consumers that the French products have been sent; and the qualities sold at from eighteen to twenty-four francs per metre have equalled half the total consumption. The cloths worn by the common people are of two kinds; a blue cloth, rather deep, light, and brilliant, whose manufactured value varies from *five to six francs per metre*, resembling in strength and wear, the southern French cloths. Cheapness is the great consideration. It is bought chiefly for clothing soldiers and officers, and for cloaks called *ponchos*: the port men, soldiers, and the officers of the police, and the seamen of the squadron, are entirely clothed with it.

The common blue cloths form half of the English importation; the remainder is of a small, fine kind of cloth, but particularly of a peculiar woollen tissue, a kind of molleton called bayeta, of a breadth of 160 centimetres and of a scarlet colour. It is now worn by both sexes. It is used for the lining of ponchos, for the *cherissas*, a piece of cloth of two metres in length upon the whole breadth of the stuff, which is used by the gauchos and cavalry soldiers. The peasant women make large shawls out of them; the Indians exchange their products for this cloth (the colour of which pleases them much,) when they are not at war with the Confederation.

N.B. The flag of Buenos Ayres is not included in the above table.

CUSTOMS DUTIES AND REGULATIONS OF BUENOS AYRES.

The war and anarchy which has so long disturbed the Argentine states; the blockades and interruptions of navigation, which have driven trade into so many different and irregular channels, have caused that customs regulations and tariffs to have been far less regarded than in any of the other Spanish American republics. Contraband trade has consequently been carried on at such points as smugglers could the most safely and speedily run their goods, regardless of tariffs, into the country.

An illiberal scale of duties and prohibitions was promulgated by a decree, in December, 1835, that scale was modified in 1840 and 1841-2. By the decree of 1841, the following articles, which were before then prohibited to be imported, were admitted at various duties varying capriciously from twenty to fifty per cent on the value: viz.

Alphabets and spelling-books for the use of schools; *wheat*, at the rate of starch; rings of copper, bronze, and iron; handles of steel, iron, and common metal, for kettles, pails, &c.; cane-brooms; bullets of lead and cast balls; buttons and button-moulds of wood, horn, or bone; *ormillas* of one or more holes; steels for striking fire; iron buckles; bird-cages; *belts*, of cotton pure, or mixed wool; hoops for casks, &c.; tallow-candles; ploughshares, *of the shape of those used in the country*; bells for cattle; glue; kitchen-strainers and skimmers of tin, iron, or steel; axletrees of iron or steel; manufactured tin; all articles of iron-work for windows and doors; forms for hats, boots, and shoes; fringes for hammercloths, cloaks, &c.; galloons pure, or mixed with cotton or wool; window gratings; gridirons.

Clothing, articles of dress, &c.—Cloaks, called *buchos*; garters of cotton and of wool, pure or mixed.

All articles of copper and brass manufactured; butter moulds of iron; mustard, prepared; steel-yards; combs of all kinds; wheels for carriages; wooden pails; saddlery and harness; tissues for counterpanes, called *sobrepellones*, for horse-cloths, for cloaks, called *punchos*.

The old tariff of 1835, appears to be thoroughly broken through, but we have no regular Buenos Ayres tariff which we can publish with any degree of accuracy, and the tariff of Monte Video hereafter introduced, may, until changed, be the probable average of the scale of duties to which goods will be subjected except those that will be run clandestinely past the customs.

Port Charges at Buenos Ayres.—The following is the last decree of the executive for levying tonnage duties at this port:—

The Argentine government has resolved, and does decree—

Article 1. From the 1st of January of the coming year, national vessels sailing from ports beyond sea, shall pay three dollars per ton.

2. Foreign vessels shall pay four dollars per ton, except those which, in virtue of existing treaties, are assimilated to national vessels.

3. Foreign vessels shall pay, for the visit of the health officer, twenty-five dollars, and the same amount for the bill of health.

4. Foreign vessels belonging to nations having no consul, and whose roll is made out by the captain of the port, shall pay forty dollars for it.

5. The duties fixed by the preceding articles shall be paid one-half on the entrance of the vessel, and the other half on her departure.

6. National and foreign vessels, which do not leave nor receive cargoes, shall pay one-half of the duties here established.

7. Let this decree be communicated, and published in the official register.

Until peace be re-established on the banks of the La Plata, we find it impossible to introduce any further commercial statements relative to Buenos Ayres.

CHAPTER XV.

CUSTOMS REGULATIONS, AND TARIFF DUTIES OF THE REPUBLIC OF URUGUAY AND MONTE VIDEO.

The commercial law in force in this republic is the old Spanish code, called the "*Ordenanzas de Bilbao*." The commercial regulations and revenue laws equally affect the commerce of all foreign nations. A discrimination is, however, observed in favour of national vessels, in regard to tonnage and other dues; also, a trifling difference in the direct tax of "licence to trade." British ships and their cargoes can, under treaty, claim the same privileges as Monte Videan vessels and their cargoes.

All laws affecting commerce are independant of local legislation, but emanate directly from the supreme government, and are liable to such changes only as the political exigencies of the republic may require.

The present revenue laws affecting foreign commerce are the following:—

1st. The custom-house law of June, 1837, establishing the rate of duty on imports and exports, and the different ports open to foreign flags.

2nd. A law, revised yearly, imposing a direct tax for licence to trade, in which a trifling advantage is secured to citizens of the republic.

3rd. An addition of sixteen per cent to the duties on imports, and five per cent on exports, were imposed to assist in meeting the extraordinary expenses of the war with Buenos Ayres.

4th. A decree, consequent on the declaration of war against Buenos Ayres, interdicting commercial intercourse with that state.

(It is stated, however, that no real obstruction is offered to the trade between the two countries, so far as relates to foreign flags.)

Customs' Laws—The Senate and House of Representatives of the Oriental Republic of Uruguay, in Congress assembled, decree, &c., concerning importations:—

ARTICLE 1. Free from duty—printing presses, paper, and other articles exclusively for this purpose; printed books; geographic maps; barks, for tanning; ashes; staves and hoops of wood; calf skins; cow and horse hides, raw; common salt; gold and silver,

coined or in bullion ; and live animals, for promoting industry and improving the breed of the country.

2. Iron, in bars, sheet, wire, or plates ; brass and steel, unwrought ; tools, in general, except those expressed in article 6 ; woods ; saltpetre ; gypsum ; fossil coal ; fur, rabbit, hare, beaver, and other furs used for hats ; cables and cordage ; tar ; ornaments of gold and silver, and watches shall pay six per cent.

3. Linen cambrics ; silk, raw or spun ; fabrics of silk ; laces and ribbons of silk or linen ; gold and silver embroidery, and fine jewellery of gold and silver, shall pay ten per cent.

4. All goods and effects, natural or industrial, not expressed in the articles of the present law, and the common serge, called "bajaras," used for bags and other purposes, shall pay nineteen per cent.

5. Sugar ; maté ; tea ; cacao ; cinnamon ; sweet oil ; spices ; drugs ; provisions in general ; woods wrought ; and tobacco in leaf, shall pay twenty-four and a half per cent.

6. Wheat ; pastes of flour (as maccaroni, &c.) ; biscuit ; starch ; cheese ; butter ; pork and beef in pickle ; trunks and boxes, empty or containing goods ; moveables ; hats ; manufactures of sheet tin ; lamp oil ; rings (large) of iron or brass ; false jewellery ; perfumery ; sap ; doors and windows with the iron-work thereof ; window grates and balconies ; spits of iron ; crowbars ; ploughshares of the kind used in the country ; shoes, for horses and mules ; tallow candles ; carriages of all kinds, not intended for carrying heavy loads ; saddles and horse trappings ; clothing, made up ; caps ; dress combs ; feathers ; artificial flowers and other ornaments for the head ; hosiery boots and shoes of all kinds ; china ware ; glass, cut, or gold figured ; mirrors ; liquors ; ardent spirits ; wines ; vinegar ; cider ; and chewing tobacco, shall pay thirty-one and a half per cent.

7. Flour ; meat, dry salted ; cigars ; and playing cards, shall, pay thirty-five per cent.

8. *Storage duty (almacenage) on all articles deposited, viz. :* one-eighth per cent per month on dry goods ; thirty-seven cents and a half on each pipe of liquids ; nine and three-eighths cents on each barrel of flour ; nine and three-eighths cents on each 203 pounds eight ounces (avoirdupois) of tobacco, yerba, sugar, and other articles of weight, except minerals, which shall pay three and one-eighth cents on the same weight ; and boxes of wine, liquors, or other liquids, which shall pay twelve cents and a half for every eight boxes.

9. In case of doubt arising in relation to the payment of storage duty, from the effects not having been expressed in the present article, the duty will be collected on the weight, nine and three-eighth cents per 203 pounds eight ounces.

10. Hides, dry, bull, cow, ox, horse, twelve cents and a half : calf and colt skins, six cents and one-quarter.

11. Hides, salted, eighteen cents and seven-eighths.

12. Steers, leifers, breeding animals, and mules, one dollar.

13. Mares, colts, and geldings, 1 dollar 50 cents.

14. All products of the country, not comprehended in the foregoing articles, shall pay one quarter per cent on the market prices, as export duty.

15. The following are excepted : salt meat, wool, pulse, grain of all kinds, flour, tanned hides, and all works of art ; foreign goods which have paid import duty, those which clear to be discharged in ports inside of the capes of the River de la Plata, and those which may be warehoused for exportation, shall be free from duty.

16. Silver, coined and in bullion, one per cent ; gold of the same description, one quarter per cent.

17. Warehousing, as yet, is not permitted, except in the custom-house of Monte Video.

18. The length of the deposit is indefinite, so long as the articles continue uninjured.

19. The state is responsible for the value of effects deposited, except in cases of fire, the inculpability of those having charge being proven.

20. Goods deposited shall always be at the disposition of the depositors during the office hours of the custom-house, and the alcalde is obliged to order the stores to be opened at their request.

21. The introducers may effect sales by wholesale, without being obliged to remove the merchandise in warehouse.

22. The executive power is authorised to establish warehouses in any of the custom-houses of the state, under the restrictions which circumstances may demand.

23. By the present law, the following ports are qualified (*habilitados*): Monte Video, Maldonado, Colonia, Soriano, Paisandee, Yaguaron, and the inland port of Tacuarembó.

Transit.

24. Is permitted and free from all export duty: all foreign effects leaving the deposito of Monte Video for foreign marts, or for other depositos which may be established in any transit custom-house.

25. Is permitted and free from import duty, in transit from a foreign country into the state, the following articles: yerba mate, tobacco in leaf, cotton (raw or spun), hides and tallow, if their destination is to one of the qualified ports of the state.

26. Is also permitted, and free from duty, the transit for foreign ports of the effects expressed in the foregoing article, by way of the River Uruguay.

27. The government will establish rules necessary to advance this class of commerce, and retains the right of determining the precise points where goods in transit to foreign marts shall be introduced.

General Dispositions.

28. The duties will be regulated by the wholesale market prices: the calculations to be made by a surveyor and two merchants, at the time of despatch of the effects at the customs' office.

29. The merchants mentioned in the foregoing article shall be comprehended in a list of twelve, which shall be formed every six months by the "tribunal del consulado," and who shall alternate by fours, each month, to be designated by the collector-general.

30. In case of disagreement between the surveyors, or objection on the part of those interested, for any difference which exceeds ten per cent shall be decided by the collector-general and two merchants, drawn by lot from said list, without recourse.

31. The judges, once assembled, shall not separate without having pronounced their decision, which will be carried into effect.

32. The operations of the surveyor and his colleagues shall be published, and the former shall be obliged to give account thereof to such merchants as may request it.

33. The government retains authority to establish special rules, in cases where, from local exigencies, the punctual execution of the dispositions of the present law cannot be obtained.

34. The dispositions of the present law cannot be altered until after six months from its publication.

35. Said dispositions shall take effect, with regard to importations from ports north of the equator, in six months from its publication; from ports south of the equator, in three months; from ports within the capes of the River de la Plata, one month: and in fifteen days on goods and effects in deposit.

36. The duties established by the law of the 26th of January, 1831, of one per cent "consulado," and one-half per cent "hospital," on imports, are comprehended in this law, and their respective products shall be separated and applied to the objects to which they are destined.

Addition to the Custom Laws of the State.

Article 1. All those effects comprehended in articles 4th, 5th, 6th, and 7th, of the general law, shall pay eight per cent as extraordinary subsidy.

2. Those effects designated in Article 5 as "provisions in general," woods wrought, wheat, pastes of flour, and flour, are excepted.

3. Common salt shall pay, at importation, twenty-five cents per three bushels.

4. Tallow, unmanufactured, shall pay, at exportation, eight per cent.

5. The foregoing articles shall take effect, with regard to importations from ports north of the equator, in six months from its publication; from south of the equator, in three

months; from ports within the capes of the Rio de la Plata, in one month; and in fifteen days for articles and effects in deposit.

6. This law shall be revised next year.

7. In addition to the duties specified above, all articles of importations shall pay eight per cent as "subsidy," except flour, which shall pay no additional duty than the eight per cent "extraordinary," designated by the law of the 29th of March; articles of export, five per cent, and jerked beef thirty-seven cents and a half per 103 pounds.

DECREE.—*Foreign Flour.*

Article 1. When the price of this article is upwards of twelve current dollars, it shall pay, as a maximum, four dollars per barrel; and when the price is below ten current dollars, it shall pay three current dollars per barrel, as a minimum.—*Rondeau, Monte Video, June 11, 1839.*

DECREE.

Article 1. Fifteen days from the publication of the present decree, all goods which may be despatched from the custom-house, and which are subject to importation duty, shall pay eight per cent additional, as a war duty extraordinary, to continue until pacific relations shall have been established.

2. From and after the same date, all articles of exportation which are actually liable to duty shall pay five per cent additional to same.

3. The executive power is authorized to extend the operation of this law, so far as regards imports, to the further term of fifteen days, to be counted in succession.—*Monte Video, June 18, 1839.*

DECREE.—*Extra Duty.*

Article 1. Jerked beef shall pay three rials per quintal on being exported, from and after the 1st day of May next. This shall be continued two years, to commence from said date, in event of the especial circumstances by which the market of this republic is affected should not have definitively ceased.

2. Establishments which are liable for patents shall pay one-third more in 1841, in addition to that which corresponds to the present year, and during the said year of 1841 the stamp paper shall be subject to an additional twenty per cent.

3. All goods which may be despatched for consumption from the custom house of the state, and which are already liable to duties (with the exception of wheat and flour), shall pay, after fifteen days from the promulgation of the present law, in addition to the custom-house subsidy law already established, eight per cent *ad valorem*; which recharge shall, however, cease from the moment the loan towards the payment of which the proceeds of the five and eight per cent subsidy extraordinary shall have been satisfied. The payment of the duties exacted by this law shall be paid in cash.

Sanctioned by the "Sala de Sesiones," in Monte Video, April 7, 1840, and its receipt acknowledged by the minister of finance on the 12th instant, at which date its fulfilment is decreed.—*Monte Video, April 1, 1840.*

Tonnage Duties and Port Charges on Foreign Vessels.—Tonnage duty, three rials, currency, per ton; guard on board, eight rials, currency, per diem; hospital fees, four dollars four rials, currency; entering and clearing, thirty-five dollars, currency; harbour pilotage, ten dollars, currency; custom-house vessel, one dollar, currency.

Pilotage from Cape St. Mary's to Monte Video.—Twelve feet pay 50 dollars; thirteen feet pay 60 dollars; fourteen feet pay 70 dollars; fifteen feet pay 90 dollars; sixteen feet pay 110 dollars; seventeen feet pay 130 dollars; eighteen feet pay 150 dollars; nineteen feet pay 180 dollars.

Port Charges on National Vessels from Sea.—Harbour pilotage, 2 dollars; tonnage duty, 2 rials per ton; entering and clearing, 10 dollars 6 cents. Coasting vessels pay no port charges.

Currency.—The currency of the country is computed in dollars, rials, and reis, viz.: —100 reis, equal to one rial; eight rials, equal to one current dollar.

The current dollar (nominal) is sixteen and two-thirds less than the Spanish (or silver dollar without pillars). The Spanish pillared dollar, and the patacone or patriot dollar, are equal to 960 reis, and twenty per cent more than the current dollar.

Doubleons, Spanish or patriot, are a legal tender for sixteen Spanish dollars or patacones; the former, however, generally command a premium of one per cent. All business transactions are settled in gold and silver coins.

Weights and Measures.—100 lbs. equal to 103 lbs. avoirdupois; one quintal, equal to 196 lbs. Spanish; one arroba, equal to 25 ditto; one pesada of dry or ox hides, equal to 40 ditto; one pesada of salted ox hides, equal to 75 ditto.

Dry Measure.—One fanega of wheat, equal to 233 lbs. Spanish; one fanega of salt, equal to 590 ditto; a fanega is equal to three and three-quarters English bushels; a moyo of salt is about sixty English bushels, or two and a quarter tons, and averages about seventeen fanegas.

Liquid Measure.—In ascertaining the contents of casks of liquids, the same instruments are used as in England, and consequently all liquids are bought and sold by the gallon.

Long Measure.—100 yards English are equal to 108 varas Spanish; 100 varas Spanish are equal to ninety-seven varas Buenos Ayres.

* These are principally slavers in ballast after landing their slaves in Brazil.

† This number includes packets and pilot-boats.

In 1844 no produce of this republic has been shipped from the port of Monte Video in consequence of the war. Produce to a very great extent, which otherwise would have passed through this custom-house, has been shipped on all parts of the coast, principally at the port of Bucco, a few miles from this city, in the territory occupied by General Oribe's troops, and at Rocha and Castillos, villages between Cape St. Mary and the Brazilian frontier, occupied alternately by one or other of the two contending parties. The greater portion of the produce of this country is derived from the remote departments on the eastern side of the republic, and has been conveyed during the war to the neighbouring port of Rio Grande in the empire of Brazil, from which it has been exported to different parts of the world.

Total.....	570,13,100	3 7	102,233 19 9

NOTE.—The city of Monte Video being besieged and blockaded there have been no exports during the year 1844. All the produce which had been warehoused in Monte Video previous to the siege was exported during the year 1844. Large sums of specie have been shipped from this port, but as the greater portion has been smuggled on board, no correct statement can be made: the following sums, however, have been passed through the custom-house.

CHARGES imposed by Public Authority on British Shipping in the Port of Monte Video.

. Average rate of exchange, forty-three pence sterling per current dollar of 800 reis.

N.B.—No vouchers are given by public authorities for any sums paid by shipping.

The only difference which exists between vessels under the flag of this country and British vessels with respect to the charges made on them is, that the national vessels pay 200 reis per ton for anchorage, while British vessels pay 300 reis per ton. The same difference exists between national vessels and the vessels of all other countries.

At the present time there are no advantages enjoyed by national or other foreign vessels from which British vessels are excluded.

Formerly national vessels had the exclusive privilege of engaging in the coasting trade, and no foreign vessel could engage in it. This was, by a decree of the oriental government, done away with during the period when hostilities were being carried on against this city by the Argentine squadron, as foreign vessels could then only be employed in transporting cattle from different parts of the coasts of this republic to this city, then under a rigorous siege.

It is probable, however, that foreign vessels will be deprived of this privilege so soon as the war shall cease.

CHAPTER XVI.

COMMERCIAL LAWS AND TRADE OF PARAGUAY.

FROM the success which has attended the first attempt at opening a direct trade with Paraguay, and from the improved cultivation of that state, we are justified in concluding, that were a termination put to the unnatural and unjust war carried on by Rosas, and to the interruption which he has established to the navigation of the River Plate above Buenos Ayres, civilised nations might carry on a lucrative trade with Paraguay and the interior states of the Argentine Republic. Even the Dictator Francia manifested some desire to establish commercial relations with England. In 1841 Mr. Hughes, a British subject, proceeded with a cargo of merchandise to the port of *Neénbucú, Villa del Pilar*. He was well received by the authorities who succeeded Dr. Francia, and descended the river, having

left a considerable surplus of British manufactures in Paraguay, over the returns of country produce brought down the Plate by him. He was, however, prevented from re-ascending by Rosas.—(See Mr. Hughes' Letter hereafter.)

CUSTOM-HOUSE LAW OF PARAGUAY.

Of Maritime Imports.

ARTICLE 1. All machinery, instruments of agriculture, science and art, all classes of geographic maps are free from duty.

2. Twenty-five per cent will be paid upon raw and spun silk, silk manufactures, net-work and laces, with or without embroidery of gold and silver, and with or without wels—all clocks and watches—jewellery of silver and gold—and every work of wood.

3. Forty per cent will be paid upon all furniture, mirrors, carriages, saddles, and their appurtenances, ready-made clothing, hats, shoes, ponchos, horse-cloths, leathern manufactures, liquors, wines, spirits, vinegar, ale, cyder, tobacco, cigars, and all kinds of perfumery.

4. Three rials per fanega will be paid upon salt.

5. Fifteen per cent will be paid upon all natural productions and manufactures which may not be enumerated in this decree.

6. One rial for each package will be paid upon all articles and manufactures which may enter into deposit, if such deposit does not exceed the term of one month,—beyond this term two rials per month will be paid upon each package.

7. Gold and silver in coin or in bars are free from duty.

8. The ports of entry, established, *for the present*, by the sovereign congress of this republic, are the Villa del Pilar (Neembucú) and Itapua.

Of Maritime Exports.

ARTICLE 1. Hides (ox, cow, calf) will pay in full two rials for each hide.

2. Horse hides will pay one rial for each hide.

3. Yerba maté will pay one rial for each arroba. Tobacco will pay four rials for each arroba.

4. All the productions of this republic, not included in the foregoing articles, will pay upon their exportation five per cent upon the current value.

5. All foreign articles and manufactures which may have paid import duties may be re-exported free of duty.

6. Also are excepted for a limited time, those who may prepare the indigo of the country for sale.

7. Those who may prepare twist tobacco according to the manner of Brazil, and snuffs; those who may establish the manufacture of vegetable oil; those who may manufacture flour of Mandioca, as it is prepared in Brazil; those who may preserve and augment the preparation of wines, spirits, and all classes of liquors; those who may establish wholesale factories for the making of sugar and soap; those who may prepare the grain dye of cochineal in the country; those who may establish mills for the cleansing of rice; those who may establish manufactories of pure and white wax, or who may set up hives of bees for the production of honey and wax; those who may discover and establish any other useful invention, and who put it into practice, shall also have the same privilege of freedom from duties in the manner expressed.

8. It is entirely prohibited in all the territory of the republic (as it has been hitherto), to export gold or silver, coined or otherwise, under penalty of confiscation, together with a fine to an amount equal to that which it is intended to export.

9. Goods deposited in bond will pay two per cent *ad valorem* upon their re-exportation.

The Manner of collecting Duties.

ARTICLE 1. The *ad valorem* duties will be fixed upon the current market value of the article, calculated by the collector and two merchants, at the time when the goods may be despatched from the custom-house deposit.

2. The merchants alluded to in the preceding article will be named by the collector.

3. In case of reclamation on the part of the importer, or that of the collector, and which may exceed ten per cent, the delegate or commandant, with two merchants newly chosen, will decide without appeal.

4. The arbiters met will not separate until they have pronounced their judgment, which will be carried into execution.

5. These operations will be public, and testimony will be given thereof, when required.

6. The evaluation effected as it is ordered by the first article of this chapter, and signed by the collector and two merchants, will be remitted to the supreme government for its deliberation.

7. From the present year the custom-house duties will be paid one-half in gold or silver currency, and the remainder as at present.

8. All decrees are hereby repealed, which may be in contradiction to this present, which shall be revised every year, for expedient purposes. And that this may reach the knowledge of all, let it be published, and copies affixed in all the customary places; and let testimonies thereof be despatched to all the towns, departments, and parishes of this jurisdiction.—Given in the palace of the supreme government in Assumption, capital of the republic of Paraguay, this thirteenth day of January, one thousand eight hundred and fifty-two.

Letter dated Buenos Ayres, 10th February, 1841, from Mr. Hughes.

SIR,

In the month of June last year, I made an application to her Britannic Majesty's government, setting forth my desire to visit the province of Paraguay, asking for a recommendation letter, and a special passport to that effect. I am now in possession of an official despatch, addressed by Lord Palmerston to his Excellency Don Gaspar De Francia, Dictator of Paraguay, requesting, in the name of the British government, my admission into that territory, and soliciting his excellency's good offices in my favour.

Before I take any further steps in the undertaking, it appears to me convenient and requisite to acquaint the government of the Argentine Confederation with my object, and to endeavour to obtain its sanction to the enterprise.

To this end I venture to trespass upon the attention of your excellency, and beg to be permitted to detail my views, and the means which I propose to employ in their attainment.

I purpose to purchase a suitable vessel, and to fit her out in the port of Buenos Ayres, under the British flag, putting on board a general cargo of such articles as are likely to suit the wants of Paraguay; and when ready, to proceed up the River Parana, direct to the port of Neembucú, there to deliver my papers to the authorities, and to await the decision of the government to my application for the admission of my vessel and cargo.

*Assumption, Capital of the Republic of Paraguay,
15th January, 1842.*

We send unto you a passport, duly signed and sealed, returning that which was presented to us, issued in your favour by the minister secretary of state for foreign affairs of her Britannic Majesty.

We also send unto you three official communications, addressed, the first unto the excellent minister secretary of state in the department of foreign affairs to her Britannic Majesty, in reply to the official note which his excellency directed through your hands unto our predecessor the deceased dictator; the second unto his excellency the plenipotentiary of her Britannic Majesty in Buenos Ayres, requesting his excellency to send forward by the earliest opportunity the above-mentioned despatch to

the foreign office; and the last to his honour the consul-general of her Britannic Majesty in Monte Video.

With this opportunity we repeat unto you the surety which we verbally gave unto you for your mercantile operations in the port of the Villa del Pilar (Neémberú) and of Itapúa, appointed for trade by the sovereign congress of this republic.

We trust you will not forget our especial charge, to signify to his excellency the minister plenipotentiary of her Britannic Majesty in Buenos Ayres, the high appreciation with which we have received the felicitation of his excellency, assuring him of our desire to preserve a pure friendship with her Britannic Majesty and all her people.

God preserve you many years.

CARLOS ANTONIO LOPEZ,
MARIANO ROQUE ALONZO.

To Richard B. Hughes, subject of her Britannic Majesty.

The Consuls of the Republic of Paraguay.—Inasmuch as the British subject, Richard B. Hughes, returns to Buenos Ayres conveying official communications to the most excellent minister secretary of state to her Britannic Majesty in the department of foreign affairs, and to his excellency the minister plenipotentiary of her Britannic Majesty in Buenos Ayres, and to his honour the consul-general of her Britannic Majesty in Monte Video.

We hereby command and enjoin all the civil and military authorities of our dependancy, with earnest request and charge to those of other jurisdictions, not to oppose any impediment to him on his journey, without just cause, but rather to afford him all the assistance he may require. To which effect we have issued the present passport, duly signed and sealed in Assumption, capital of the republic of Paraguay, this eighteenth day of January, one thousand eight hundred and forty-two.

(Signed as above.)

The Buenos Ayrean government having refused to allow Mr. Hughes to send a vessel up the Parana for his property, in the following terms in a reply given by Senor Arana to Mr. Mandeville's request:—

“That Mr. Hughes's application could not be listened to—no permissions were granted to go beyond the limits of the province of Buenos Ayres. That the government would not give a licence for Entre Rios, and certainly not for Paraguay. That if he had taken up a larger amount of goods than he could bring returns for, it was no ground whatever upon which he could make a claim for a further licence.”

Mr. Mandeville considered Mr. Arana's answer as final and conclusive. Its injustice cannot be too severely condemned.

END OF VOL. III.
